Education. -There were 997 schools for white children in 1918, with a total enrolment of

children in 1918, with a total enrolment of 95,229 and an average attendance of 83,280, and 3 hormal colleges. There were also 325 native schools, a Asiatic achool, and so coloured schools, with as 185 pupils.

Administration.—The government is administrated by an Administration, aided by a Provincial Council of 185 members, elected for a years). These is an Executive Council to a inconservation.

Administrator. Hon. A. G. Robertson.

Recoutive Committee, B. D. G. Pienaar, H. J. Larin, G. Hartog, J. F. Ludorf, Provincial Speretury, D. E. van Volden.

The Capital is PRHTORIA, pop. 2512, 48,600 (white 26,650, coloured: 18,500). Pretories which is also the seat of the Union Government, is pleasantly altuated on the River Aspies, and has wide, shady streets and magnificent buildings. The principal town is JOHANNESBURG, 5,500 feet above sea level, about 35 miles S.W. of the capital. Johannesburg is the centre of the Witwatersrand goldfields, and possesses magnificent buildings. Among its other la-dustries are printing, brickmaking, brewing, tobacco manufactures and iron foundries. The population in 1912 was 237,220 (white 120,411, coloured 116,809).

Pretoria is distant from London 7,200 miles; transit, via Capetown, 19 days.

### ORANGE FREE STATE.

The Province of the Orange Free State has a total area of 50,389 square miles, and is divided into 24 districts. The population at the last three censuses was :--

Year 1890			White. 77,716	('oloured. 229 787	Total. 207,503
1904	•	٠	142,679 175,189	244,636	367.315
			181,678	35=,985	588,174

In 1911, of the whites, 94,488 were males and 80,701 females; and of the coloured races, 153,030 were males and 169,955 females.

Religion.—In xoxx the adherents of the Dutch Reformed Church numbered 775,322: Wesleyana, 88.857; Anglicana, 44.407; Presbyteriana, 7,549; Congregationalists, 8,368; Lutherana, 8,727; Roman Catholics, 5,696; Jews, a,868; and "No Religion," 173,336 (173,198 natives).

Education.—Higher education is under the control of the Union Ministry. In 1918 there an enrolment of 36,900 pupils, and, except when the parents object, both official languages are taught. were 875 public and aided private schools, with

Administration .- The government is administered by an Administrator, aided by a Provincial Council of as members (elected for 3 years). There is an Executive Committee of 4 members.

Administrator, Hon. Sir Cornelius Helmanus Wessels.

Executive Committee, D. J. de Villiers, General F. J. W. J. Hattingh, A. A. Cilliers, D. J. Malan.

Provincial Secretary, A. M. N. de Villiers.

BLOEMFONTEIN, the Capital and sent of the Provincial Government, had a population of 26,939 (14,760 whites, 12,169 coloured) in 1972. A new sewerage system and an additional water aupply are in successful operation. Six new bridges of masonry, 8g ft. sjam, have heen built over the Bloom Spruit, which has been straightened to avoid a repetition of the sething flood of Jan., 2004. " R! " 1" to 14?

Bloemfontein is distant from Bonden 6, 760 miles; Cranait, old Capetown; 15 days.

Races and Religions.

Native Population.—There are three distinct elements in the native population of Egypt. The largest, or "Egyptian" element, is a Hamito-Semite race, known in the rural districts as Fellahin Afellâh = ploughman, or tiller of the soil). The fellahin have been mainly Mahammadans since the conquest of the country in the seventh century, but 824,474 Coptic Christians are enumerated in the towns and villages. These Egyptian townsmen and peasantry numbered 12,404,897 in the total of the Census of 1917. A second element is the Bedouin, or nomadic Arabs of the Libyan and Araban deserts (32,663 Bedouins and 107,350 Sudanese and Berlariu), of whom about one-seventh are real nomads, and the remainder semi-sedentary tent-dwellers on the outskirts of the cultivated land of the Nile Valley and the Fayâm. The third element is the Nubian of the Nile Valley, between Aswân and Wadi Halfa, of mixed Arab and negro blood. The Bedouins and Nubians are Muhammadans.

Foreign Population.—At the Census of 1917 the foreign residents were 205,998, of were Turks, 55,735 Greeks, 40,198 Italians, 24,356 British, 21,270 French and Tunisians, 2,789 Austro-Hungarians, 4,225 Russians, 157 Germans, 23,976 other Europeans, and 1,406 Persians.

Religions.—At the Census of 1917 there were 11,523,745 Muhammadans, 1,026,715 Christians, 59,581 Jews and 8,814 other religions.

## PHYSIOGRAPHY.

Boundaries.—Feypt occasive the north-eastern corner of the African continent, between 22° and 32° N. lat. and 24° 37° E. long: The aertheri beaudary is the Mediterranean, and in the south Egypt is conterminous with the Anglo-Egyptian Sudan. The western boundary runs from a point on the coast, N. of Sollûm (long, 25° E.), inland in a south-westerly direction for some distance and then turns S. along a meridian line approximately in long, 24° E. until it meets the parallel of 22° N. lat., which forms the N. boundary of the Anglo-Egyptian Sudan. The E. boundary follows a line drawn from Rafa on the Mediterranean (34° 15' E. long.) to the head of the Gulf of Aquaba, from which point the remainder of the E. boundary is washed by the waters of the Gulf of Aquaba and the Red Sea.

Coast.—The Mediterranean coast of Egypt is flat and sandy, except to the westward of Alexandria, where low rocky cliffs in places approach the sea. Along the Red Sea coast a sloping sandy and gravelly plain mostly intervenes between the mountains and the sea, but the mountains rise generally to great heights at only a short distance inland, while in certain places, notably in the Gulfs of Suez and Aquaba, they approach so closely to the sea that their feet are washed by its waters. Coral reefs are conspicuous almost everywhere along the Red Sea coast, and there are numerous outlying shoals. Apart from the three great seaports of Alexandria, Port Said, and Snez, Egypt has but few harbours and anchorages adapted for large craft; the principal are those of Sollum and Matruh on the Mediterranean, Tor, Abu Zenima, Zentia, Jomas and Hurghada in the Gulf of Suez, and

Safaga, Qosseir and Halaib on the Red Sea.

The Nile Valley.—The principal feature of Egypt is the Nile Valley, where the river runs through cliffs, which, with the exception of a stretch of granite in the neighbourhood of Aswan, are chiefly of sandstone from Wadi Halfa to near Esna, while further north from Luxor to Cairo limestone predominates. The valley varies in width from less than half a mile in the southern granitic region to over ten miles in the northern limestone region, and the cliffs in some places rive to heights of over a thousand feet above the river. The fertile lands, on which the prosperity of the country depends, occupy the floor of the valley between the river and the bounding cliffs, while to the north of Cairo they spread out into the irregular fan-shaped formation of the Delta which comprises the six provinces of Lower Egypt, with the richest soil in the country. The Nile has a total length of 3,470 miles from the Victoria Nyanza to its mouths. In the 960 miles of its course through Egypt it receives not a single tributary stream. The river has a regular yearly rise and fall, attaining its maximum level about the middle of September and its minimum about the end of May. At ('airo the average rise and fall is about thirteen feet. The water of the Nile is carried in artificial canals for the purpose of irrigation, only the surplus being allowed to flow into the sea. The great dam at Aswan serves to impound some of the waters of the river in the early and more rapid part of its falling stage, so that they may be released during the summer to mitigate the deficiency which would otherwise occur at the lowest stages. Smaller barrages have been built at Esna, Assiut, and at the head of Delta to control the supply of water into the great canals. West of the river, about 60 miles south of Cairo, is the fertile province of Fayum, with an area of about 500 square miles. This province, which is separated from the river by a narrow strip of desert, is watered by a great canal over 100 miles long called the Bahr Yusef, which takes its water from the river at Deirnt.

The Libyan Desert.—Westward from the Nile Valley into Tripoli stretches the vast limestone plateau of the Libvan Desert. Though as a whole it constitutes one of the most arid and inhospitable regions of the world, the Libvan Desert contains a number of depressions wherein wells and springs furnish water in sufficient quantity to irrigate small areas and to support populations of several thousands. These depressions are the Oases, of which the principal from S. E. to N.W. are known as Kharga. Dahkla, Farafra, Baharia, and Siwa. On the eastern edge of the Libvan Desert, a few miles south-west of Cairo, stand the Pyramids of Gias, of which the highest, the Great Pyramid, is 451 feet high. Close to the

pyramids is the Great Sphinz, 189 feet long.

The Eastern Desert of Egypt.—The country between the Nile and the Red Sea, known as the Eastern or Arabian Desert of Egypt, though likewise on the whole a very waterless region, presents a marked contrast to the Libyan Desert. Instead of being a vast manotonous plateau like the country on the other side of the river, the Eastern Desert presents a great diversity of physiographical features, the most marked one being the great back-bene of high and regged mountains, mostly of igneous and metamorphic rocks, which extends north-west and from Abyssinia to near Suez, and reappears as a detached mass in the Peninsula of Sinai. The principal peaks of the Egyptian portion of this mountain chain are (from N. to S.) Gebels (Mounts) Ghario 5,760 feet, Abu Dokhan 5,450 feet,

Shevib 7,150 feet, Hamata 6,490 feet, Faraid 4,480 feet, Gerf 4,650 feet, Shendib 6,371 feet, and Elba 4,680 feet. Flanking the mountain chain on the west, between the axis of the range and the Nile are plateaux of sandstenes and dimestones the west, between the axis of the range and the Nile are plateaux of sandstenes and dimestones the west between the axis of water-courses), often of great length and depth, with some wild vegetation and occasional wells and springs. The mountain-axis being much nearer to the field Sea than to the Nile, the slopes of the eastern side are as a rule much seeper than those facing westwards, and the sedimentary flanking-plateaux are absent for long distances along the Red Sea coast. Wells and springs are more frequent in the south parts of the Eastern Desert tian in the north, owing to the southern tracts approaching more closely to the tropical rainzous. The roads through the Eastern Desert follow as a rule the course of the main undis from well to well, and here and there are to be found small encampments of the wandering Arabs who form the scanty population of the region. The breeding of fast-trotting camels a carried on chiefly by the Bisharin tribes who inherit the south parts of the Eastern Desert is the source of most of the limited mineral wealth of Egypt; petroleum is worked at Jemsa and Hurgada, on the coast of the Gulf of Suez, and phosphates are mined on a considerable scale in the neighbourhood of Safaga and Qosseir, while at a few apots gold and emeralds have been extracted, though as a rule with very little commercial success.

The Sinai Peninsula.—The north (Mediterranean) coast of Sinai is flat and sandy like that of Egypt. Inland, the ground gradually rises into a highly dissocted limestone plateau, which extends southward for about 150 miles and terminates in the great scarp of El Tih; in some parts this scarp rises to over 5,000 feet above the sea-level. South of kl Tih the character of the country abruptly changes, the southern third of the peninsula being formed of rugged granitic mountains intersected by deep ravines. The highest peaks of these mountains, such as Gebels (Mounts) Katherina, 8,680 feet, Um Shouner, 8,530 feet, Eth Thebt, 8,030 feet, are higher than any of those in Egypt proper. Springs and wells occur in fair abundance, mostly in the wadis, and running water (mostly brackish) is found at a few pounts. The mineral wealth of Sinai is not great, but manganese-ore is mined on a considerable scale in the mountains cast of Abu Zenima, and oil has been struck in borings on the Sinai side of the Gulf of Suez, though not as yet in payable

quantites.

## GOVERNMENT.

From B.C. 30 to A.D. 639 Egypt was a province of the Roman Empire, but in A.D. 640 the Christian inhabitants were subjugated by Moslem invaders, and Egypt became a province of the Eastern Caliphate. In 1517 the country was incorporated in the Ottoman Empire, and was governed by pashas sent from Constantinople until the beginning of the eighteenth century, when for about 100 years the ruler was chosen from among the Mamelukes, or bodyguard. From 1802-1804 French troops occupied the country, with the ostensible object of suppressing the Mamelukes and restoring the authority of the Sultan, and after their evacuation of the country, Mohammed Ali, who was appointed governor in 1805, exterminated the Mamelukes in 1811, and was eventually made hereditary governor of Egypt and the Sudau by a firman from the Sultan of Feb. 13, 1841. Mohammed Ali was succeeded before his death by his son Ibrahim (1848), whose neithew Abbas Is ruled from 1848-1854. During the reign of Said (1854-1863), a son of Mohammed Ali, the cencession for the Suez Canal was obtained, and his successor *Ismail* (1863-1879), a son of Ibrahim, was granted (by *firman* of May 14, 1867) the title of Khedive, the previous rulers having held the title of Vali, or Governor. In the early years of Ismail's reign the Egyptian dominions were very largely extended, until in 1875 its erritories comprised an area of nearly 1,500,000 sq. miles, with a population of about 16,000,000. The wild extravagance of Isinail drove him to raise enormous loans in Europe, which plunged the country into such financial embarassment that the Governments of France and Great Britain intervened and forced Ismail to abdicate, appointing his son Temfik (1879-1892) to succeed him.

Dual Control.—By a Khedivial decree of November 10, 1879, two Comptrollers-General were appointed for the reorganisation of the administration and re-establishment of financial equilibrium, Major Evelyn Baring being the British and M. de Blignières the French representatives. The Dual Control governed Egypt for two years, and a series of reforms was initiated, but further progress was interrupted by a military revolt, headed by an officer of the Egyptian Army (Ahmed Arâbi Paska). The revolt assumed alsomatical proportions, but the French Government declined to intervene, and a British expedition was

despatched to re establish the authority of the Khedire.

British Uccupation,—The Dual Centrel was abolished by a decree of the Lindive (January 18, 1883), and a British financial adviser was appointed in place of the

Comptroller General. In January, 1884, Sir Evelyn Baring (who had previously served as Comptroller General) was appointed Consul-General for the United Kingdom, and the British expeditionary force, sent to quell the rebellion of 1882, remained in the country as an army of occurrence. Mannwhile a revolt had broken out in the southern provinces, headed by Sheikh Mohamited Ahmed, of Dongola, who proclaimed himself a Madd of Islam. This fevolt led to the terilograry abandonment of the territory now known as the Atiglo-Egyptian Sudan. In 1892 Tewfik was succeeded by his elder son Abbas II., who was debosed in 1914. Sir Evelyn Baring (created Earl of Cromer) resigned the post of British Agent and Con-ul-General in 1907, and was succeeded by Sir Edon Cotst, upon whose death (1917) the post was filled by the abnointment of Viscount Kitchener. whose death (1917) the post was filled by the appointment of Viscount Kitchener.

British Protectorate.—In 1914 Egypt was a semi-independent tributary State of the Ottoman Empire, occupied by British troops. At the outbreak of the Great War the Khedive, Abbas II., who was absent from the country, declared himself an adherent of the Central Powers and was deposed, Hussein Kamil Pasha being appointed in his stead. On November 18, 1914, a British Protectorate was declared over Egypt, which was therefore taken from the suzerainty of the Sultan of Turkey, and the Khedive assumed the title of Sultan. Sultan Hussein Kamil died October 9, 1917, and was succeeded by his brother, the present Sultan. In September, 1919, a Commission (under the Presidency of Lord Milner) conducted an investigation into the affairs of Egypt, with a view to reporting on the introduction of fuller measures of self-government and of reforms in the judicial system. Duffing the closing months of 1919 symptoms of the unrest, which had pervaded the world in consequence of the Great War, evinced themselves in Egypt, and serious rioting occurred in Cairo and Alexandria. On November 19, 1919, Field-Marshall Viscount Allenby, the British High Commissioner, issued a proclamation defining the aims of the British Government.\*

Sultan of Egypt.

His Highness Fuad I., G.C.B. (Ahmad Fuad), Sultan of Egypt; born March 26, 1868; succeeded his brother. October 9, 1917; married May 24, 1919, to the daughter of Sabri Pasha.

Brothers of the Sultan.

H.H. Prince Ibrahim Hilmi; born 1860. H.H. Prince Mahmoud Hamdi; born 1863.

British High Commissioner.

High Commissioner for Egypt, His Excellency Field-Marshal Viscount Allenby, 6.C.B., G.C.M.G. (October, 1919) ......£7,600

· THE EXECUTIVE

There is a Council of Ministers, appointed by the Sultan, with a President, who acts as Prime Minister. The various Ministers prepare drafts of administrative decrees, which are submitted to the Council. When approved and signed by the Sultan these decrees become law.

The British High Commissioner has a seat in the Council of Ministers; the British financial adviser attends the meetings of the Council, but has no vote.

### Council of Ministers

(May 20, 1920).

Prime Minister and Minister of the Interior, Tewfik Nessim Pasha.

Minister of Finance, Mahmoud Fakri Pasha. Minister of Public Works, War and Marine, Muhammed Shank Pasha.

Minister of Communications, Ahmed Ziver Pasha. Minister of Wagfs (Pious Foundations), Hussein Darwiche Ber

Minister of Education, Mohammad Tewfik Rifast Pasha.

Minister of Justice, Ahmed Zulfikar Pasha, Minister of Agriculture, Yusef Soliman Bey.

WAQFE (PIOUS FOUNDATIONS)

Under Secretary of State, Mohammed Zaghlul Pasha.

THE LEGISLATURE.

By the Organic Law of 1883 were created (1) a Legislative Council of 30 members, and (a) a General Assembly consisting of the Legislative Council the Ministers of State, and 46 members elected by the people. These hodies were mainly consultative (except in respect of the imposition of new direct, personal, or land, taxes, on which questions the General Assembly's vote was declaive), the legislative power resting with the Khedive and his Ministers. By a Law of July, 1913, these two bodies were merged into one called the Legislative Assembly, consisting of (a) the Ministers as ex-office members, (b) 66 elected members, and (c) 17 members nominated by the Government, 15 of these to represent cortain minorities. The elected members are chosen in each district by the electors-delegate, each of whom represents so electors on the principle of mandate and recall. Their term of concern is for 6 years, but a third of both monitated and elected members retire biominally compulsory on all Egyptian subjects between the

The Assembly one initiate legislation and musti-be consulted on laws istinated by the documents trent, as also on public loans, and importance modifications of the radiway and invisation systems. The Government is not beautive, the resolutions of the Assembly, although the legis-lative procedure laid dogs, casues that the Government shall act in that knowledge of the views of the Assembly. The Assembly late is view of the Assembly, The Assembly late is view to the vector of the constant of the will be an inright of veto only on questions of new direct. personal or land taxation

### THE JUDICATURE.

Justice is administered under four distluct systems, all except the Consular Courts being supervised by the Ministry of Justice, to which a British judicial adviser is attached. The systems are (1) Mehkemas, or Courts of the Quids, who are chosen from the skulents of Azhar University and administer Muhammadan Law following the Hanaüte Rite. (a) Native Tribunals, containing Egyptian and foreign Tribunals, containing Repythan and foreign judges, and dealing with criminal changes against natives, and with obtaining in which both plaintiff and defendant are local subjects. (3) Mixed Tribunals, founded in 1876 to deal principally with civil actions between foreigners of different nationality and between foreigners and natives. (4) Consular Courts (of the 15 powers possessing rights to them by treaty) with criminal jurisdiction over foreigners, and judging civil cases between foreigners of the same nationality.

### Mehizemas.

Sheikh-el-Azhar, Mohamed Abu El Fadle. Grand Mufti, Mohamed Ismail el Bardici.

Native Tribunals ''

President of the Court of Appeal, Ahmed Talaat Pasha.

Vice-President, John Hope Percival Procureur Général, Mohamed Ibrahim Bev.

Maxed Tribungls.

President of the Court of Appeal, M. de Sanza Larcher.

Vice-President, M. Francis Laloe.

## LOCAL GOVERNMENT.

The chief towns constitute governorships (muhdfzas), and the remainder of the occupied country is divided into provinces (mudirias), which are subdivided into districts (marka), each under a massiar, who controls the head man (omda) of each village in his district. By the law of 1883 provincial councils were instituted. consisting of two representatives from each markaz, under the presidency of the mudir (or governor) of the province. These councils were government in the passion of local government. These country were made the elementary education authority for the province, with certain restricted powers of local government.

### DEFENCE.

The British Forces in Egypt and Palestine since the outbreak of the Great War have undergone many changes, and until the situation in the East has been cleared up its ultimate strength cannot be determined. The Com-mander-in-Chief in Egypt is Field-Marshal Viscount Allenby, c.C.B., c.C.N.C. (the High Commissioner); the G.U.C., Espetian Ecul Force, is Lieut. Gen. Sir W. N. Congreve, F.C.

ages of he and egithe recruits required each year being obless by hallet; but fortain chiases (pro-feachs, stadents, Government 'employees, do.) remain insurance, to volument in improyees, ed.) are exampt, and rempited may also be perchased for £Esc, if paid before the tailot. Natives of the Sudan are entisted voluntarily for service in the Egyptian Army. The Sirdar is appointed by the Sultan with the cousent of the British Government.

Sirder of the Egyptian Army, Major-Gen. Str L. O. F. Stack, E.B.E., C.M.G. Chief Staff Officer and Adjutant-General, Col. L. K. Smith, D.S.O.

There is no Navy in the proper sense of the term; there are 3 small cruisers belonging to the Coast Guard and Fisheries service, and 4 vessels under the Ministry of Communications, while the different Government Departments possess steamers on the Nile for inspection purposes

The Egyptian Police (under the Ministry of the Interior) consists of City and Provincial Police, the former comprising see officers, 376 constables, and 5,503 men (443 Europeans), the latter 34s officers and 5,501 men. There are also 54,42s ghaftre, or native night-watchmen.

### EDUCATION.

Education on native lines has long been given in elementary vernacular schools; some of these are under native management, and the rest are partly under the direct control of the Ministry of Education and partly under its inspection for grants-in-aid. The native its inspection for grants-in-aid. The native system of education is completed by the more promising pupils at the Aghar University in Cairo, the principal University of the Modern world. In see there were 134 Elementary Schools (Minitabe) under Government supervision, with ablest zg., 300 pupils, 'and about y., 390 Mattebe under inspection for grants-in-aid with wer., 360 pupils at there were also speed pupils in other pleinestary deficels. The government primary

schools give a 4-years outree and prepare for admission to necessary, agricultural and wither special schools. There were also 7 government Secondary Schools with ages publis and "sk Secondary Schools under inspection for graintein-sid with ages publis in sec. There are Colleges of Medicine, Law, Education, Engineering, Commerce, Veterinary Science and Agriculture at Cairo. Much assistance is given to education by private enterprise and benevolence and foreign schools abound. A National Univerand foreign schools abound. A National University, under entirely Egyptian management, was founded in 1908 at Cairo. Proposals are under consideration for the establishment of a State University and for the generalising of education among the masses of the people.

### FINANCE.

The revenue and expenditure for the 7 years 1914-15 to 1920-1 (Budget estimates for 1920-1) are stated as follows in £E. (£Ez = £z os.  $3\frac{1}{4}d$ . English or £Eo 975 = £z sterling).

The reckless financial administration timber fismall, 1983 and, led to the bankruptcy of the constry in 1876 and to a France British investi-

ration and isottlement of the inctional finances. For the protection of the buildholders there was instituted a Caisar de la Dete, a body representing the creditors of the Egyptian Treasury with considerable powers and special privileges. The Caisae, appealated during an era of bank-raptcy, succeeded in protecting the interests of the bondholders, but as Egypt became solvent and prosperous, its stringent regulations prevented the development of the country out of surplus revenue, a large part of which was held in suspense as contingent security for the service of the debt. By an agreement of April 8, 1904, between Great Britain and France, subsequently ratified by all the Powers, the restrictions which hampered the liberty of the Egyptian Government in financial matters were abolished. Though the Caisae de la Dette still exists, its duties are now limited to receiving the revenues necessary for the interest and for the payment of the coupons as they become due, while it also holds a consideravie reserve fund (amounting to £Es, 15, 436 on April 1, 1918), the interest on which reduces the amount of the Treasury contribution. The Egyptian debt was stated as follows (in £ sterling) on April 1, 1919 and 1930 :—

Debt.	1919.	1930
Guaranteed Debt, 3)	£ 6,288,900	£ 6,098,400

### PRODUCTION AND INDUSTRY.

Irrigation .- The total area of Egypt is estimated at ap roximately ass, roo, ooo English acres, of which about 8,450,000 acres are formed of the alluvium brought down by the Nile from the Abysinian hills, the remainder being chiefly limestone desert. Only the former are cultisable, and only that portion of them which can he irrigated from the waters of the Nile-this portion amounts at present to 5,400,000 acres (1919), and is capable of extension (to 7,600,000 acres) by the improvement of water storage facilities and means of distribution. King Mena (B.C. 4000, approximately) is said to have been the founder of the first scientific system of using the Nile water for irrigation purposes; he employed what is known as the basin system, which is still used for the irrigation of all the land lying to the south of Deirut in Upper Egypt. By this system the land is divided into rectangular areas varying in size from 5,000 to 50,000 acres and surrounded by banks; water is admitted to these basins during the flood season (August) to an average depth of 3 feet, and is left on the land for about 40 days; it is then run off and the seed is sown broadcast on the uncovered land. Since the British occupation the lasin systems have been improved and provided with numbers of important masonry works; they have also been insured against an insufficient flood by the conatruction of barrages at Esna and Assist, of which the former was built during seed-of, and the latter in 1868 rose; they are situated in lat. mg 28 N. and mg 22 N. respectively.

About rest Mehammed 'Ali Palas hitroduced the system of perennial irrigation by digging deep canals in which the water could flow all the water round, by which means it was possible to give the cultivation of cotton on a large scale. During his reign the barrages across the Belts were begun, under the direction of Mongel Bey, in 1843 and 1847 respectively, but by 1865 they were found to be unworkable. Since the British occupation they have been restored and greatly improved (1856-91), and a vast storage dam has been constructed at Aswan (lat. 24° 2° N.) at a cost of £18.742,000, which was opened on December 10, 1905; its height has since been raised so as to increase the capacity of the reservoir thus formed to a total of 85,450,000,000 coubic feet. A barrage has also been built at Zifta in Lower Egypt.

By these works, and by the construction of a vast network of canals with controlling masonry works, a small part of the excess waters of the river have been stored and distributed at all seasons of the year, and perennial irrigation has been extended throughout Middle and Lower Egypt. The increase in the value of the land has been enormous, and some a million acres have been added to the cultivable land of Egypt.

Agraulture and Live Stock.—Although nearly the whole population is directly or indirectly connected with agraculture, the total given in the census return of 1917, under the headings of propinetors, tenants and labourers, &c., amounts to 4,023,000 persons employed, representing only 30'g per cent. of the population. The land is held as to 4,773,005 feddins by 3.662.803 native owners and as to 5,465,155 feddins by 8.442 Eur. pea. 18 Of the native landlords 1,044,372 own. u up to 1 feddin, 476,920 up to 5 feddins = 1°038 acres)

The agricultural land is of two kinds. The first is that which is under the basin irrigation system, by whi h the land receives one watering only. This watering consists of a flooding at high Nile as the flood decreases, the seeds of the various crops are sown, and the basin fields are left without further watering. Harvests of wheat, barley, beans, clover, vetches and lentils are gathered in due course. The second kind of land is that which is perennially irrigated by means of canals, and receives waterings according to rotations laid down by the Irrigation Department. In these lands, which are for the most part in Lower Egypt, cotton, maize, wheat, rice, hears, harley, sugar cane, clover, vegetables and fruit are the chief crops In 1919 Egypt expert of 6,708,906 kantars of raw cotton valued at £15.441,901 (against 5,019,689 kantars, £28,024,467, in 1918). In 1919 Egypt the Quantity taken by the United Kingdom was 3,742,725 kantars (£38,324,139) against 3,526,401 kantars (£25,865) in 1918. In August, 1924, the price of this cotton was 81340, per lb.; in January, 1918, the price was 21440, per lb.; in January, 1918, the price was 21440, per lb.; and in March, 1919, the Quotation was 934, per lb.

Minerals.—The riparian districts of the lower Valley of the Nile are ill-provided with workable mineral deposits, with the exception of abundant building materials. The mineral resources of Egypt, therefore, are situated in its otherwise barren deserts. Known deposits are chiefly situated at great distances from one another and from the Nile. This fact has retarded exploration and development, but of late years considerable progress has been made. Owing to lack of knowledge of mining, consequent upon their pursuit being entirely agricultural, the local industrial classes have had very little hand in the existing enterprises, whose capital and organisation is chiefly foreign. In 1919 the value of the principal minerals produced was phosphates, £8156,720; salt, £856,623; metallic ores, £876,623; gold ingots, £830,633; and kernsine. £817,621.

and organisation is chiefly foreign. In app the value of the principal minerals produced was phosphates, £E126,730; salt, £E36,033; metallic ores, £E76,031; got lagots, £E30,033; and kerosine, £E17,931.

The following minerals, metals, and precious stokes are at present being axploited or developed on a commercial scale:—building stones, clays, gypeums, gold, manganese ores, tatton, periodeum, phosphate of time, periodes, salt, alven, magnicials, and ochres. Bender those

mentioned above, there are known to exist, in quantities more or less important, appper own, emeralds, granite, iron eres, mickel, ones, smer mental stones and sulphun. Enquiries respecting the geology of Egypt should be addressed to she Geological Museum. Applications conce ming mining and quarrying and the issue of licences and leases should be made to the Department of Mines, Deseason Post Office, Bypgt.

Manufactures.—There are some cotton mills in the Delta for the manufacture of rough calice; whilst in Upper Reput are sugar, rice, and four mills, and a certain amount of pottery is made. Cigarette factories centre at Cairo and Alexandria from imported tobacco.

## EXTERNAL TRADE.

The imports and exports of merchandise (the produce or manufacture of Egypt) for the \$\infty\$ years, 1914-1919, are stated as follows:—

Year	Imports.	Exports.	Total
1914 1915 1916 1917 1918	£E 21,724,606 19,328,993 30,886,888 31,838,998 51,155,306 47,409,717	£E  24,091,796  27,046,872  37,461,763  41,049,613  46,748,752  75,888,321	£E 45,816,408 46,375,865 68,348,651 72,888,610 97,904,058 183,296,038

In addition to the above figures for 1923 there were re-exports valued at £E4,307,40x against £Ex,376,732 in 1928. The adverse balance of £E4,406,554 in 1928 was turned into an excess of exports over imports of £E48,478,604 in 1929.

There is a general import duty of 8 per cent. ad valorem on all articles except fuel, tunber, cattle and meat, which pay 4 per cent. ad valorem; and an export duty of about 1 per cent. all round. The principal articles imported and exported in 1252 were:—

Imports	Exports
Imports Textiles £Ez8 845,836 Cereals, &c. s,sfs,ogs	Animals,&c. £E1,473 Raw Cotton 65,441,901

### COMMUNICATIONS.

Railways.—There is a network of railways in the Delta, the principal lines radiating from Cairo to Alexandria (and on to Rosetta), Damietta, and Ismailia (continuing northwards to Port Said and southward to Suez). From Cairo the line runs southwards for a distance of 554 miles to Shellal, the First Cataract. point a steamer connexion runs to Wadi Halfa, connecting the Egyptian State system with the Sudan Government Railways. Westwards from Alexandria (and close to the coast) runs a line, which it is hoped to extend eventually to the frontier at Solium, thus joining Tripoli to Egypt. The total length of the Egyptian State Railways (excluding the Auxiliary Railways of 1 pper Egypt and the Western Osses Railway) on March 31, 1980, was 1,590 miles. 26.212.088 passengers and 4,200,702 tons of merchandise were carried during 1917-8, the net receipts being Ex. 190.874. The gauge is standard (4 ft. 8½ in.), with the exception of 125 miles between Luxur and Shellal, which are 3 ft. 6 in. gauge. There are two other State-owned lines in Egypt, There namely, the Auxiliary Railways of Upper Egypt, consisting of as miles of standard gauge, and the Western Oases Railways, a length of 141 miles (75 centimetre gauge) connecting the cases of Kharga with the Nile Valley. In addition to the Government lines, there are 8x8 miles of light railways exploited by public companies. By the completion of a swing bridge over the Suez Canal at Kantara (March, 1918) there is now direct railway communication from Cairo to Palestine.

Caravan Routes.—The principal caravan routes lead to the Oases of the Libyan Desert (though Kharga can now be reached by train), whence there is a route, known as the Darb el 'Arbain, leading to Dar Für and the south of the Sudan. There are many well-known routes across the Arabian Desert to the Red Sea, that from Qena to Coseir being probably the most frequently used

Skinning,—The Khedivial Mail Steamship Line (which is under British management) has its headquarters at Alexandria and a depôt at Suez ; the majority of the Egyptian pilgrims to Mecca now travel by it. The principal port is Alexnow travel by it. The principal port is Alexandria, where now tessels (1,330,700 tone) entered and 755 vessels (1,350,421 tons) cleared in 1919. The traffic through Port Said amounted in 1919 to 255 vessels entered and 256 cleared, the remainder being dealt with vid Suez.

Posts and Tolograppia.—There were in 1919 a.501 post offices and stations, dealing with a total intend correspondence of fig. 255 esc (included to 150 to 1

A system of rural savings banks has been introduced, under the control of the Post Office, the actual deposits being collected in each district by the sarraf (village tax-collector).

### THE SUEZ CANAL.

The Sucz Canal.—The Compagnie Universelle du Canal Maritime de Suez is an Egyptian company, authorised in 1856, and confirmed in 1866, with a capital of 200,000,000 francs in 400,000 shares of 500 france each. The British Government acquired from the Khedive in 1875 a total of 176,602 shares (cost £4,000,000, value March 31,

2900, £23,192,000).
The Suez Canal was opened in 1869. The total length of the canal is roz miles, with a width of 45 metres (147 ft. 8 in.), having cost 743,260,929 francs to construct and enlarge, the maximum draught of water allowed for vessels using the caual is 9'14 metres (30 feet). The average time for the transit through the canal is 16 hours 13 minutes. By a convention, signed on Oct. 29, 1888, the canal was exempted from blockade, and vessels of all nations, whether armed or not, are to be allowed to pass through it in peace or war. The management of the canal is entrusted to a council of 32 administrators, of whom roare British (three representing H.M. Government and seven the shipowning interest).

British Directors, Sir Thomas Sutherland, G.C.M.G. (Vice-President of the Company); Sir Fredk. Green, K.B.E.; T. Harrison Hughes, Lord Inchcape, G.C.M.G., K.C.S.I., K.C.L.E., Oswald Sanderson; Sir E. Wyldbore-Smith; Sir Owen E. Phillips, G.C.M.G.

Representing H.B.M. Gort., H.T. Anstruther; Sir Ian Malcolm, K.C.M.G. (and one vacancy).

The transit receipts in 1870 were 5,718,756 fr. and in 1919 145,098,560 fr.
The present rate of transit dues is 8 fr. agc. per

ton, and 5 fr 75 c, for vessels in ballast.
The net dividends for the year 1915 amounted

to rac fr. on the ordinary 500 fr. shares, and 97 925 fr. on the Actions de Jouissance. In 1929, the dividends were 191 877 fr. and 168 597 fr., respectively.

The following table shows the number and tonnage of vessels which have passed through the Suez Canal since 1914, with the percentage of British vessels :-

Year.	No. of Vessels	Net Tons.	Bratish Tonnage.
1914 1915 1916 1917 1918 1919	4,802 3.708 3,110 2,353 2,522 3,986	19,419,495 15,266,155 22,325,347 8,368,928 9,251,601 16,013,802	% 66°5 76°3 79°6 73°6 79°5 70°9

### TOWNS.

CAIRO, the capital, stands on the E. bank of the Nile, about 14 miles from the head of the Delta. Its oldest part is the fortress of Rabylon in old Cairo, with its Roman bastions and Coptic churches. The earliest Arab building is the Mosque of 'Amr, dating from A.B. 643, and the ngor post omoge and seasons, desimg with a most conspicuous is the Citadel, bufft by Saladn ing letters, post-cards, newspapers, &c.), and a towards the end of the asth emittry. The total foreign correspondence of 30,277,000. There were on December 21, 2258, 4422 miles of telegraphs, with 22,20 miles of wire, ever which saladn correspondence of wire, ever which saladn correspondence of wire, ever which saladn correspondence of wire, ever which saladn correspondence of telegraphs, with 22,20 miles of wire, ever which saladn correspondence of 50,277,000. There were on December 21, 225, 442 messages were transmitted during 225.

ALEXAMPRIA, founded B.C. 23s by Alexander time Great, was for over a,000 years the engital of Egypt. Its great Pharos, or lighthouse, was one of the "Seven Wonders of the World." It now contains two palaces of the Sultan's, Rasel-Tin and Montasa, while almost the entire cotton trade of the country is here controlled by the big dealers and brokers. The principal towns (with their population in 1927) are as TAMES PARES

The Seven Wonders of the World are generally enumerated as follows:—
The Pransida,
The Hanging Gardens of Babylon,
The Tourb of Manacius,
The Tourb of Manacius,
The Tourbe of Diseas at Ripheses,
The Statue of Jupitar by Phidias.
The Prace (lighthouse) of Alexandria.

weights, measures, and currency. Weights and Measures.

The Metric System of Weights and Measures and the foot and pound and their multiples, are legal in Egypt. The foot and pound are rarely legal in Egypt. The foot and pound are rarely used and the Metric System is little known

except in the large towns.

The Weights and Measures in common use, with their English equivalents, are as follows :--

Qasaba(used for agricultural land)= xx 6s feet

z Qirat ......=209°3 sq. yards z Feddan (=24 qirats) .....= z °038 acres Capacityz Kėla..... 

z Roti ..... = '99 lb. z Oke ...... 2.75 lb.

Qantar (=roo rotis) == 99 eg lb.
A Qantar of unginned cotton = 215 lb., of ginned cotton = roo lb.; an Ardeb of wheat = 150 kilogrammes, of barley = 120 kilogrammes, of iso ktogrammes, of pariety = ind ktogrammes, where is significant

seed = 270 rotis = 267 lb., 8 g ardess of cutton-Currency.

seed = x ton.

The Egyptian monetary system prescribed by the Law of October, rest, is on a gold monometallic basis, the unit being the Egyptian pound of roc plastres, or r,oco milliames, weighing 8 5000 grams, o 875 fine, or 7.4375 grams of fine gold.

The Legal tender qualities of the coins are: Gold—the Egyptian pound and so plastre pieces full legal tender. Silver—pieces of so, ro, 5 and s plastres up to a sum of soo plastres. Mickel pieces of xo, 5, s and x milliemes up to a sum of xo piastres. Brouze—pieces of 1/2 millieme up to zo plastres.

The respective values of the new Egyptian coins are designated thereon in both Arabic and Ringlish characters.

The pound sterling is also legal tender in Egypt at the fixed rate of 97's plastres. The so-frame piece and equivalent coins of the Latin Union circulate at the fixed rate of 77 rapiastres. The gold circulation consists almost entirely of The gold chronation consists almost enursity or British sovereigns, the Egyptian pound and the other legal tender gold coins being comparatively rare; the British sovereign is, therefore, the real hasts of the mometary system, and the foreign exchanges, expressed in piastres, are based, not on the Egyptian pound of no piastres, but on the Buffild sovereign feet returns. but on the British sovereign of 971/2 plastres.

The National Bank of Egypt issues notes for (LE) 100, 50, 10, 5 and x, and (plastres) to and as: and the Government Currency Notes for (piastres) to and g.

CAIRO is a sue miles from fiendon; transit sdays, or by P. & O. Hail old Brindlet, sidays.

The inhabitants of the Anglo-Egyptian Sudan are partly Arabs, partly Negroes, and partly Nubian of mixed Arab-Negro blood, with a small foreign element, including some 3,000 Europeans. The Arabs are all Muhammadans, as are some of the Negroes and the Nubians, but the Negroes are generally pagans. Before 1884 the population was believed to be between 8,000,000 and 10,000,000, but by 1898 they had been reduced to about 1,500,000 by war, repression, and disease.

### PHYSIOGRAPHY.

Boundaries.—The Sudan extends from the southern boundary of Egypt. 22° N. lat., to the northern shore of the Albert Nyanza, 2° 19' N. lat., and reaches from the French Sahara about 18° 15' E. (at 22° N.) to the north-west boundary of Eritres (Italian) in 38° 30' E. (at 18° N.). The greatest length from north to so th is approximately 1,400 miles, and from east to west 1,200 miles. The northern boundary is the 22nd parallel of North latitude; on the east lie the Red Sea, Eritrea and Abvssinia; on the south lie the Eritish Protectorate of Uganda and the Belgian Congo; and on the west the French Congo.

Northern Region.—The greater portion of the region between 16° N. and 22° N. consists

Northern Region.—The greater portion of the region between 16° N. and 22° N. consists of the Nubian Desert on the east and the Libvan Desert on the west, divided by the fertile valley of the Nile, which is nowhere of great width. The Nubian Desert is bounded on the south by the rivers Atbara and Gash, the latter of which looses its annual flood in a f ritle delta north of the town of Kassala. It is traversed from south to north by the continuation of the Abyssinian highlands, which constitutes the Nile-Red Sea water parting, and forms a series of parallel rocky ranges rising to a height of 5,000 feet, the lower slopes and valleys of which are clothed in vegetation and comparatively well watered. The maritime plain' lying between these mountains and the Red Sea is covered with low bush, and at Tokar the Baraka (a mountain torrent) waters sufficient of it to produce excellent cotton.

The Central Region, between 16° N. and 10° N., contains on the east the co-culled "Island of Meroë," the ancient seat of civilization in the Sudan, situated between the Athara and the Blue Nile rivers. It is now almost uninhabited save for the natives who visit it to raise a precarious crop after the annual rains. The districts bordering on the typer renthes of the Blue Nile are covered with forests of large trees.

Southern Region .- From 100 N. to the southern boundaries are extensive tracts of

cultivable lands enclosed by a semi-circle of forests and swamps, through which a multitude of streams flow into the main river.

Darfur is mainly an elevated plateau about 3,000 feet above sea level, with occasional summits in the Jebel Marra and Jebel Medob of 6,000 feet, with summer torrents in the khors, which flood much of the southern districts and vanish in the winter. The Lado enclave, which had been leased to Leopold II., King of the Belgians, reverted at his death to the Anglo-Egyptian administration, and now forms part of Mongalla. The total area of the enclave is estimated at 15,000 sq. miles, with a Negro population of about 250,000. The Gambela enclave (within the boundaries of Abyssinia) is leased from the Abyssinian Government as a trading post.

Hydrography.—The Nile basin covers a total area of nearly 1,100 000 sq. miles, and while part of the basin lies in Abyssinia and Eritrea, its course from the Central African Lakes to the Mediterranean is within the British Protectorates of Uganda and Central Africa, and the Egyptian and Sudanese dominions. The main stream issues from the Victoria Nyanza at the Ripon Falls and flows through Lake Choga, whence it diverges to the Albert Nyanza and enters the plains of Lado, in the Mongalla Province of the Sudan; as the Bahr el Jebel. At Lake No the stream effects a confluence with the Bahr el Ghazal. from the south-west, and further east with the Sobat, from the south-western highlands of Abyssima. From the junction with the Bahr el Ghazal the stream is known as the Bahr el Abiad, or White Nile. At Khartum, 535 miles above the Sobat confluence, the river is reinforced by the Bahr el Azrak, or Blue Nile, from the south-east, and near El Damer, 200 miles further north, by a confluence with the Atbara, from Abyssinia. Thence the river flows north-west to Abu Hamed, and makes a great south-westerly bend, across the Nubian Desert, before resuming its northward course through the Dongolas to the northern frontier at Wadi Halfa. From the Atbara confluence to the Mediterranean the Nile has a course of close on 1,600 miles, and from its sources to the confluence its length may be reckoned at 2,400 miles, giving a total waterway of 4,000 miles. From the Ripon Falls (on the northern shore of Victoria Nyanza) to Rosetta (on the Mediterranean) the length of the waterway is stated to be 3,475 miles. Between Khartum and Wadi Halfa occur five of the six Cataracts, the remaining (first) cataract being in Egypt at Assuan. The sixth occurs at the Shabluka Gorge, below Khartum; the fifth below Berber, at El Solimanieh; the fourth in the Nubian bend, between Monastir and Merowe; the third between New Dongola and the 20° N. lat.; the second ends just above Wadi Halfa; the first (in Upper Egypt) has been greatly diminished in vehemence by the construction of the dam and locks at Assuan.

### GOVERNMENT.

The Sudan is administered by a Governor-General, aided, since 1910, by a Council nominated from amongst the Officials of the Government. All Ordinances and Laws are made by the Governor-General in Council. The Civil and Criminal Codes are based on those of India and Egypt. The boundaries correspond in general with the territory obtained by conquest from the indigenous tribes by the armies of Mohammed Ali, the first Khedive of Egypt, and of his successors up to Ismail Pasha, between 1820 and 1875. At one time the authority of the Khedive extended along the western shore of the Red Sea as far as the Somali coast, but these outlying portions were gradual y given up, and in 1884 the Mahdist rebellion, culminating in the fall of Khartum and the death of General Gordon on Jan. 26, 1885, comelled the Egyptian Government to withdraw from the whole of the Sudan, with the exception of Wadi Halfa on the Nile and Suakin on the Red Sea, which were held as frontier posts. An invasion of Egypt by the Mahdist hordes under Wad El Nejumi was defeated at the battle of Toski on Aug. 3, 1889, but from 1885, untit the final overthrow of Mahdism in the campaign of 1896-98, the country was entirely under the oppressive rule of the Dervishes, and suffered a set-back from which it will take many years to recover, the population decreasing from about 0,000,000 to less than 2 000,000 through famine and the spread of disease due to misgovernment. Mohammed Ahmed, the original Madbi, died a natural death on June 22, 1885, but was succeeded by the Khalifa Abdu lahi, who ruled until his final overthrow by the Anglo-Egyptian army at the battle of Omdurman on Sept. 2, 1898. He escaped from the battle and remained at large until he, and most of his remaining Emirs, were killed at the battle of Gedid on Nov. 24, 1898. After the reconquest of the Sudan a treaty, signed on Jan. 29, 1899, between Egypt and Great Britslin, defined the boundary between Egypt and the Sudan, and provided for its administration. The British and Egyptian flags for logether and the territory is administered by a Governor-General appointed by Egypt with the consent of the British coverament. No duties may be levied on imports from Egypt and duties on imports out the Red Sea ports size exceed those layed in Egypt. The import and expert of slaves is prohibited.

### LOCAL GOVERNMENT.

The Sudan is divided into 15 provinces (mudirias) under governors (mudirs), subdivided ts. The governors In some provinces into mamurias, or districts. (see p. 669) are all British. there are High Court or Provincial Judges; in others the Governor acts as Provincial Judge. District Judges have been appointed in many instances, and where no appointments have been made the Provincial Inspectors and District Officers act in their stead.

### DEFENCE.

Several regiments of the Egyptian Army (see Egypt) are stationed in the Sudan, which forms an excellent recruiting ground, and the Sirder (Commander-in-Chief) is Governor-General of the Sudan. A detached body of the British army of occupation in Egypt is quartered at Khartum, under the command of the Sirder. The police and the locally recruited irregulars (jehadia) are under provincial administration.

## EDUCATION.

In addition to kuttabs (vernacular schools) there are 6 primary schools at Khartum, Omdurman, Wad Medani, El Obeid, Raskim and Abars, where instruction is given in English as well as Arabic, attended by about 2,000 punits; a unconderpeached at Khartum (Condon College), and a training college (also at Gordon College);

and testigioni or fruite schools at Khartum and Omdurman. The central authority is the Edu cation Department.

### PINANCE.

The revenue and expenditure of the Sudan for the seven years 1915 1916 are stated as follows:-

Your.	Bevenue.	Expenditure,
1913 1914	£E2,654,250 2,543,550	Ex,614,007
1916	s,496,230 s,857,860	z,463,94# z,745,530
1917 1918	2,195,360 2,774,690	1,901,940 2,336,315
1919	a,99a,793	8,720,513

The revenue is derived mainly from land tax, animal tax, royalties, customs and railways, posts, telegraphs and steamboat services. The deficits of the early years were met by a contri-bution from the Egyptian exchequer, the total sum so paid by Egypt from 1907-1911 amounting to £3,435,000. In addition, nearly £5,000,000 to £3,435,000. In addition, nearly £5,000,000 has been advanced by Egypt for public works in the Sudan.

### PRODUCTION AND INDUSTRY.

Agriculture .- In 1918 the area under cultivation was about 2,700,000 acres, of which (approximately) 8½ per cent. was rain cultivation, 23 per cent. naturally flooded, and g per cent. irrigated by artificial means. The area artificially irrigated is being extended (a) by pumping installations and (b) by gravitation canals. The basin system (see Egypt, Irrigation) is used in the Dongola mudira. The chief rain crop is dura (African millet), which forms the staple food of the Sudanese. Wheat, barley, dates, lentils, beans, onions and melons are also grown, and groundnuts and sesame are also produced for oil, and an excellent quality of cotton in rapidly increasing quantities, the high prices being a great inducement to the cultivators. The forests of the south-west and south contain valuable timber, and gum is derived from the forests of Kordofan and the valley of the Blue Nile, the Sudan being the chief source of the world's supply of gum arabic; rubber is obtained from the Southern Provinces. The Live Stock includes camels, horses, cattle, sheep, goats and asses; and wild (and semi-wild) ostrich in Kordofan. The cattle trade is increasing in importance annually; cattle are easily raised and the quality of the stock is improving under the supervision of the Veterinary Department.

Minerals.—Gold was once worked extensively from mines on the Red Sea littoral; in modern times these ancient workings have been respended from time to time with varying success. Lighte, iron and copper are known to exist, and the last two are worked by natives in the Bahr el Ghazal Province.

## EXTERNAL TRADE."

The principal exports are gum, ivory obtained by elephant hunters, cattle, sheep, sesame, sizes, cotton and action each, hidse and skins, the principal "imposts are cotton goods, machinery and metals, coal, food-stuffs, tobacco

There are 55 stationary are travelling Post and Telegraph offices, and wireless telegraphy offices.  TOWNS.	rx and sing

### COMMUNICATIONS.

Radivaye, &c. - In zers about 1,500 miles of railways were open for traffic. The Sudan Railway ways were open for traffic. The Sudan mailway resched. Khastum in 1899; a line from Atbara to the Red Sea at Port Sudan and Suakin, and a branch to the Halfa-Khastum line from Abu Hamed to Karetima to tap the Dongola Province, were opened in 1996. A bridge has been constructed over the Blue Nile at Khartum, and rans to El Obeid, the chief town of Kordofan Province, crossing the White Nile by another bridge near Hillet Abbas. Since the opening of bridge near Hillet Abbas. Since the opening of Lado and Rejat.

### TOWNS.

CAPITAL, KHARTUM, at the junction of the White and Blue Niles. The town has been rebuilt and now contains a large mosque for Muhammadans, a cathedral, and the Gordon Muhammadans, a cathedral, and the Gordon College, with extensive government buildings. Population about ag.eec. Opposite Khartum, of the Blue Nile is Khartum North (ag.eec), and on the White Nile is Omdurman (6e,eec), the former Madhist capital. Other towns are Berber, Aballamed, Merowé, Dongola, Wadi Halfs, Port Sudan, Suskin, Kasala, Kamiin, Sennar, Wad Medani, Roseires, Gallabat, Gedaref, El Obeid, El Dueim, El Fasher (Darfur), Kodok, Mongalla, Lado and Reisf.

## The League of the Umpire (Founded 1901).

(Associated with the Overseas Club.)

1000

3 4 13

TER League is entirely non-political and nonsectarian. Its practical work has been to promote co-operation between the different Countries and Colonies of the Empire, mainly in affairs connected with education, and to afford full and correct information regarding them, so that the duties of citizenship may be better understood and appreciated, and personal and active interest inspired in the great problems connected with our Empire's conditions and progress. The relation of the League to the Education Departments and Governments throughout the Empire has been regularised (a) through the recommendation of its work to the Governments concerned by the Colonial Office of the Imperial Government and by the Agents-General in 1908-3;
(b) by the active and widespread acceptance of its schemes by the different Educational Authorities and Governments. In 1907 the League carried through the first Conference between the Education Departments of the Home and Colonial Governments. One of the effects of this Conference was that the Imperial Government undertook to call the Imperial Conference on Education in 1911. In 1918 the first Imperial Conference of Teachers' Associations was held by the League, and in 1913 was inaugurated the Imperial Union of Teachers. In 1921 the second Imperial Conference of Teachers Associations will be held in Toronto, by invitation of the Government of Ontario. An annual meeting of July. The League, through the liberality of the late. Mr. Louis Spitzed, has published a series

of text-books on the Empire, under the editorship of Professor A. F. Pollard: (1) "The British Empire—Its Past, Its Present, and Its Future" (a book of reference); (a) "The British Empire and Its History" (for Secondary Schools); (3) "The Story of the British Empire." In 1907 the League helped to establish a face industry in St. Helena. With the co-operation of the Oversea. and Home Education Authorities a Scheme for the interchange of Teachers throughout the Empire is now in active operation, the League arranging yearly interchange appointments. The School Affiliation and Comrades Correspondence Sections were established in 1901-s. Other work undertaken are the giving of lectures, the establishment of a bureau of information, essay competitions, exhibitions, and the furthering of the keeping of Empire Day.

During the War the League distributed from its depôt over a million articles to the hospitals and troops, besides helping prisoners and others in distress. The League has also given colours and shields to all the overseas contingents who fought for the Empire.

The League also held a Conference of Oversea Soldier-Teachers in 2029.

## Emperial Crown Colonies and Protectorates,

HORE .- The Indian Empire, Canada, Newfoundland, Australia, New Zenland, The Union of South Africa, and Doubt and the Sudan are shown separately. The following his includes the British Deminious and Protectorates which have not yet received "Responsible Government."

ASCENSION.

an Japlated Island in the South Atlantic (3,cry niles from Plymouth, 760 from St. Helena, and see from Cape Palmus on the African Coach, is of whealic origin, the peak rising to the height of a. See feet, situated 7' sg' sg" S. lat., and za' sg' s" W. long. It is said to have been discovered by a Portuguese named Josode Nova Gallego, on Ascension Day, mes, and two years later was visited by Alphonse d'Albuquerque, who gave the island its present name. Its extreme length is 7½ miles, and extreme breadth 6 miles, with an area of about square miles, and being situated in the heart of the S.E. trade winds, its climate is dry and salubrious up to sice feet, but above that height to its limit it is damp and foggy. It remained unlinhabited till isrs, when the English took pos-segation of it. The island is under the Board of Admiralty, by whom an officer is appointed as commandant. The inhabitants consist of officers and their families, seamen, marines, and Kroomen; a limited number of men also have their families with them, the full complement of the island being about 250 (exclusive of 40 members and servants of the Eastern Telegraph Co.), with about 35 women and children. Georgetown, the garrison settlement, is situated in a small bay on the N.W. coast. Ascension is visited by the sea-turtle from January to May, which lay their eggs in the sand, xx being "turned" during roat, their weight being from sec to see ib. The sooty tern, or "wide-awake," use the island as a nesting-place about every eighth month, their eggs being much appreciated by the inhabitants.

### BAHAWAS

The Bahamas (or Lucayos) are an archipelago of the British West Indies, lying between ar<sup>2</sup> 4s' - xy<sup>2</sup> 3s' N. lat. and xa<sup>2</sup> 4o' - yo<sup>2</sup> 5' W. long., and extending from the coast of Florida on the north-west to Haiti on the south-east. The group consists of about twenty inhabited islands, and solve the south coast. and an immense number of islets and rocks, comprising an area of about 4,444 square miles, and a population in 1917 of 59,928, the most part being descendants of liberated Africans. The principal islands are: New Providence (containing the capital, Nassau), San Salvador, Abaco, Grand Bahama, Long Island, Eleuthera, Exuma, Harbour Island, Inagus, Andres Islands, Watlings Island, Ram Cay, Long Cay, Ragged Island, and Biminis. Originally settled by Englishmen, the Bahamas were, in 1981, surprised by the Spanish, but at the peace of Versailles were restored to the English. The climate is restored to the English. The climate is salubrious, and in the winter Nassau, which is outside the tropics, is frequented by many Americans. The chief industry is sponge-gathering; the exports of sponge in 2918 being valued at

Evoyasa. The fruit trade is principally with the United States, bananas, coco-nuts, fruit and vegetables being exported. Tomatoes are heing cultivased in large quantities for shipment to the Tuited States. Mahogany, lignum-vite, mastic, fromwood, ebony, logwood, and satis-wood are found throughout the Islands. A fibre industry is largely established, the land under the fibre plant before shout a secree and the their shout are a secree. fibre plant being about so,000 acres, and the value of Bahamas hemp fibre exported in 1918, £ 126, 164. The imports are chiefly food-stuffs, wines, spirits, cotton, slik and weested fabrics, and hardware.

The Government is vested in a Governor, aided by an Executive Council of 9 members, a nominated Legislative Council of 9 members, and an elective Representative Assembly of 29 members.

### BERMUDA.

The Bermudas, or Somers Islands, are a cluster of about xos small islands (15 or 16 only of which are inhabited, the rest being mere rocks) situated in the west of the Atlantic Ocean, in 32° 25' N. lat. and 64° 52' W. long, comprising an area of about xo square miles, and containing a population of xx,840(x,443 white, and x4,395 coloured). These islands derive their name from Bermudez, a Spaniard, who sighted them in x5x7; but they were first colonised by Admiral Sir George Somers, who was shipwrecked here in foo, on his way to Virginia. The nearest point of the mainland is Cape Hatteras, in North Carolina, 550 miles distant.

"The Government is administered by a Governor, who is also commander in-chief of the military forces. He is advised by an Executive Council of 7 members, appointed by the Crown. There is also a Legislative Council, composed of 9 members appointed by the Crown; and a representative House of Assembly consisting of 35 members. The classate is maid and healthy. There are

House of Assembly consisting of 35 memores. The disnate is sailed and healthy. There are no streams or wells, and the inhabitants are dependent on the rainfall stored and preserved in tunks. Negotation is prelifie; the printipal trees: being the Bermuda seelar fundpot, feeling the Bermuda seelar fundpot, feelings, the great-flaspotanos for shipbuilding. The islands produce harge quantities of outons.

### BORNEO.

Borneo is a large island in the Eastern Archipelago, extending from lat.  $y^2 4$  N. to  $4^2$  ze 8.; and from long. res<sup>2</sup> ze' to reg<sup>2</sup> ze E. It is about the miles in length and too in breadth, and contains an area of 284,000 square miles, divided by the equatorial line into two nearly equal portions. The population is probably about 1,846,000, consisting chiefly of Dyaks, Malays, Kyans, Papus or Negritos, Chinese, Bajaus, Dusuns, Muruts and Bugis (the abortginal Celéhes). The island was discovered by the Portuguese in 1523, and at the present time rather more than two-thirds of the island is included within "Netherlands' India." The remainder of the island is under British protection.

### BRITISH NORTH BORNEO.

The territory of British Novth Borneo occupies the northern part of the island, with a total area of about 32,000 square miles, and a coast-line of about 900 miles. The population is 22,000, consisting mainly of Muhammadan settlers on the coast, aboriginal tribes inland, and a large number of Chinese traders, artisans, and agriculturatiabourers. The interior is mountainous (Mount Kinabalu, 13,485 feet) and is densely timbered. The two chief towns are Bandakan, 5th 255

The two chief towns are Sandakan, on the most coast, and Jesselton, on the wist coast. All legislation is passed by the Legislative Council, which consists of y official and granding in monitoris members, who have the tood; this if Humanusbie. The appointment of the Geyelwier is subject to the appointment of the Geyelwier of States. For administrative purposes the whole Gaste at

disided into a Restitutoirs. The laws are based on the Ludien codes of oriminal and civil procedure, amusted and adapted by local ordinances. There is an image's Court for Muhammadan law.

#### BRUNEI.

Sultan, H.H. Mohamed Jemal-ul-alam, K.C.N.G., Alc. May 22, 2906.

A riasive State on the north-west coast of the Island of Borneo. The botal area is about 4-be square miles, the estimated population being 30-cos (2g12). The territory was placed under British protection in 1888, and on Jan. 1, 2006, the Suitan accepted by treaty a British Resident to assist and advise him in the administration. The chief town, Brunei, has a population of nearly 10,000, and is built entirely on the water, except the Chinese quarter which is on land, communication being possible only by boat.

High Commissioner, The Governor of the

High Commissioner, The Governor of the Straits Settlements. British Resident. Brunei. G. K. Cator.

British Rendent, Brunei, G. R. Cator. Executive Engineer, P. W. D., Edmund Roberts (soho also acts as Oficer-in-Charge). Treasurer & Supt. Customs (vacant).

Brunei is g hours by steamer from Labuan, and communication is now regularly maintained.

#### BRITISH GUIANA,

which includes the Counties of Demerara, Essequibo, and Berbice, is situated on the northeast coast of South America and has a total area of 89,480 square miles, with a seaboard of more than 300 miles. The population, Dec. 31, 2928, was estimated at 310,972, of whom 134,672 were East Indian immigrants. The colony is bounded East Indian immigrants. In e colony is connect on the south by Brazil, on the east by Dutch Guiana, on the west by Venezuela, and on the north and N.E by the Atlantic Ocean. The climate is hot, but not unhealthy. The cultivated portion of the country, amounting to about 188,000 acres (of which 72,365 acres are in sugar-cane), is confined to the sea-coast and to a short distance from the rivers. The coastland is very like the Netherlands, being below the level of the sea, and intersected with canals constructed by its former Dutch owners. At the junction of the boundaries of British Guiana and Venezuela is Mt. Roraima, a flat-topped mountain 8,740 feet above sea level, and on the Potaro River is the Kaieteur Falls, with a clear drop of 741 feet and a total fall of 8ss feet. The seasons are divided into dry and wet, the two dry seasons lasting from the middle of February to the end of April, and from the middle of August to the end of November. The temperature ranges between 75° and 90° F. The birth-rate in 1918 was 25's, and the death-rate 40'6 per x,con. The chief product is sugar, which forms 20 per cant. of the export trade. The leading exports are sugar (£3.066,784 in 1928), rum, diamonds, timber, balatz, and rice. There are about 13.000 shoriginal Indans; they are occupied layely in fishing, hunting, and raising crops of cassava.

The Government consists of a Governor and a Scient of Policy of 25 other members, 7 official and 8 elected, and a Combined Court including the members of the Court of Policy together with six elected Hisancial Representatives; with an Executive Council, consisting of the Governor, 5 official and 3 members members membered by the Crown. There are 2,804 miles of post-office

#### BRITISH HONDURAS.

British Honduras, in Central America, lies within 18° 29' 3" to 13° 33' 33" N. latitude and 89° 9' 22" to 88° 20' W. longitude. Its extreme length and breadth are 174 m. and 68 m. respectively; it is bounded on the north by Yucatan (Mexico), on the west and south by Guatemala, and on the east by the Caribbean Sea. The total and on the east by the cariobean sea. The Otal area is about 7,55s sq. miles, with a population (Census 1917) of 40,458—20,374 males and 20,654 females. The climate generally is damp and hot, but not unhealthy. The temperature ranges from 50° to 96°. The average lies between 75° and 80°, but this is considerably tempered by the prevailing sea-breezes. The country consists chiefly of primeval forest, with savannahs and socailed "pine-ridges," which are open sandy plains covered with a wiry grass and dotted with pinetrees, affording fair runs for cattle. The ground is level and swampy along the coast-line, and generaily flat for about ten or twenty miles inland; after which hills from see ft. to 4,000 ft. high succeed each other to the western boundary.

The staple products are the natural woods of the colony, principally mahogany and logwood. Sugar, rutber and cases grow readily. Fruit, in-civiling basensa, plantains, coor, outs, piesepples, oranges, and mangoes also grow well, while inbest description of oscale trees grow wild in the bush. Crown lands can be parchased at Super-arre, plus cost of increes, which averages about \$1 mg per acre, or leased at an animal regulated ago: to goo, per acre. There are 6s primary schools in the colony, and 3 schools with second-ary descriptments in Bellies

ary departments in Belize.

British Honduras is governed as a Crown colony. There is an Executive Council of colony. There is an Executive Council er 3 official and 3 appointed members and a Legisla-tive Council of 9 editors and 9 appointed members. The Governor is President of both Councils.

#### CAMEROOM.

(Joint Franco-British Administration.)

The German Protectorate of Kamerun on the west coast of Africa between (British) Nigeria and French Congo (the Spanish Muni River Settlements occupying a small intervening area), was obtained by conquest by Frauc:-British forces during the War of 1984-28, and at the conclusion of Peace its administration was confided by the Supreme Council of the Allied Powers to Great Britain and France jointly.

The approximate geographical limits are be-tween so-rso N. lat. and S 48'-rso E. long., and the area is about agg.ooc square miles, containing a population estimated at 3,500,000. The coast line extends from the Rie del Rey to the Muni River. The south-eastern boundary (as re-arranged in xoxx) is the confinence of the Sanga with the Congo River; the extreme northern limit is the southern shore of Lake Chad, and the extreme eastern limit. (seen) is the Ubangi River. The territory occupies, the north-west corner of the Central African Plateau, with Cameroon Peak (13,370 feet) mear a capital, on the coast, and the chelichi m Mandars Mountains on the north-west frontie likid there are extensive regions of good pasturage. Papital, on the coast, and the Chebohi.

There are indications of gold and other minerals.

About 60,000 sores are under outdwatton. The Access was obtained to the Coast, and the Coast.

Rivers by the Rendit compensation treaty with Princic (upri), united which the area of the essenty was impeased by set, see square miles. The Sanga Erk topicates by set, see square miles, The Sanga Erk topicates Persence Po; the Sanga and Bachs (or Egoko) are tributaries of the Cough, and the Logome-Shari slows into Lake Ohad. The inhabitants are Bantus and Sudanees, with some Hamman and Fulla tribes, of whom the latter are Muhammadans and the remainder "Cook quitter that the property of t pagans. Cocos cultivation is a highly successful ludustry of recent origin, and the Protectorate is rich in forest produce. The exports (valued at 15,336,000 marks in zers) are rubber, paim oil, paim kernels, coops and tvory; the imports (14,44,000 marks in 1923) are chiefly clothing and textile goods, meat, fish and provisions. There were the miles of railway open in 1922.

In some the whole area was divided into a British Sphere and a French Sphere.
The British Sphere is a wedge-shaped strip,

running with the Nigerian border, and containing an area of about as, one of miles. It is ad-ministered by the Nigerian Government, the capital being Bura, on the slopes of the Cameroon Mountain. The principal port is Victoria (in Ambas Bay), which is connected by railway with the capital.

CAYMAN ISLANDS.

The Cayman Islands, forming a dependency of Jamaica, are situated between the meridians 70° 44° and 82° 56° W., parallels of 12° 12° and 12° 46° N., and consist of three islands, Grand Cayman, Cayman Brac, and Little Cayman, with a total area of sag square miles. They are said to have been discovered by Christopher Columhus on his return voyage from Porto Bello to Haiti, and called "Las Tortugas." Population

(1821) 5.554. The principal town is Georgetown, in Grand

Cayman, population (1912) 1,449.

Commissioner & Judge of the Grand Court, H. H. Hutchings (house and fees) .... £600

CEYLON.

an island in the Indian Ocean, to the south-east of the peninsula of Hindustan, is situated between g° 55'-9° 50'2' N. lat. and 79° 4s'-81° 53' E. long. Its area, is (with outlying islands) 25,481 square miles, or more than three-fourths of that of Ireland. Its greatest length is from north to o miles; and its greatest width 140 miles. acuth, m

The climate varies with the altitude of the district; but on the whole, though tropical, it is healthy, except in the low-lying jungle. The coolest months are December and January; the

hottest are April and May.

The population (Census of zers) was 4, zze, 367, the most important element being the Sinhalese, descendants of colonists from the valley of the Gauges, who first settled in the island about Canges, who has section in the insula source in Caylon and formed settlements along the coast; but about 250 years later they were dispossessed by the Dutch. In 1956 the British took possession of the Dutch settlements on the island, and annexed them to the Presidency of Madras; but they many after in also Caylon was arrested. annexed them to the Frenchery of Mauras; but five years after, in also, Ceylon was erected into a separate Crown colony. In 1813 the King of Kandy was deposed and banished; and his douinions, which had up to that time main-tained their independence of European rule, were annexed to the British Crown

The stable products of the islands are agri-oultural. The most important for home con-

sumption is rice in its two forms of paddy and dry grain. The principal exports are tea, cold and products of the coco-nut palm, cinchous, rubber, cocos, cinnamon, cardamous, ebony, and a little vanilla.

About one-fourth of the island is under cuitivation, and the leading areas in 1919, in acres, varion, and the leading areas in 1529, in access
were:—Rice, 710,083; other grain, 159,584; tea,
499,581; coffee, 941; coco-huts, 1,021,590; rubber, 208,687; cinnamon, 35,083; cocoa, 31,325;
and tobacco, 12,46. The live stock in 1539
intolded 1,558,969 horned cattle, 68,040 alterp,
180,569 goate, 39,300 pigs, and 3,558 horses.
Among the more important native industries are gold, silver, brass, ivory and tortoiseshell work, pottery, mats, fans, and wood-carving. Ceylon is famous for precious stones, especially catseyes, rubies, &c. ; and the pearl fishery in the Gulf of Mannar, off the N.W. of the island, yielded a revenue of Rs.s,405,645 in 1905. The facture of sait is a Government monopoly.

There are 728 miles of railway open, being s ft. 6 in. gauge and rry miles a ft. 6 in.; and the post and telegraph offices numbered 711, there being 7,319 miles of telegraph wire.
The government of Ceylon is administered by

a Governor, aided by an Executive Council of 7 members, and a Legislative Council of az members, including the Governor and the Executive Council. The Legislative Council contains representatives of the principal races and interests in the island. Four of the ten unofficial members are elected. the rest nominated by the Governor.

For administrative purposes the island is divided into 9 provinces, at the head of each of which is a Government agent. The larger towns have municipalities or local boards; and in the country districts the natives retain their village councils and tribunals for matters of minor importance.

The MALDIVE ARCHIPELAGO lies to the S.W. of Ceylon, a few degrees north of the equator. Male, the seat of government, is about 400 miles distant from Ceylon, to which the islands have always been nominally tributary. The Sultan acknowledges his allegiance by sending an annual embassy to Colombo. The natives are Muhammedius. The islands are unhealthy, and the main exports are dried fish, cowrie shells, coconut ceir, and tortoiseshell.
Colombo. distant from London 6.200 miles:

transit, 16 days.

#### CYPRUS

is an island in the Mediterranean Sea, between N lat 34° 33' and 35 41', and E. long 32° 17' and 36° 35' It is about 40 miles distant from the nearest point of Asia Minor; and 60 miles from Latakia, on the Syrian coast. The distance Latakia, on the Syrian coast. The distance to Port Said, at the entrance of the Suez Canal, is a38 miles. The larger part of the island is an irregular parallelogram, roo miles long and 6e to 3e broad; from which a narrow peninsula, 5 or 6 miles wide, runs out for 4e miles towards the north-east. The area is 3,584 square miles. The estimated population on Dec. 31. 1919 was 311,108, of whom about at per cent. were Muhammadans, and the remainder mostly meaniers of the autocephajons Church of Cyprus, which is a branch of the Orthodox Eastern Church. The principal productions are grain of various kinds, sesame, linseed, wine and irits, silk, olives, locust-beans (carobs), cotton, wood, lides, grapes, oranges, pomegranates, asbestos, aniseed, aponges, sumac leaves, terra unders, gypeum, and sait. The fertility of the soil has for centeries been provertial. In mag the wine export was r.4ee,6se gals, and that of apicitis say, aga gals. The 'bulk of the wine sed spirits say, aga gals. The 'bulk of the wine sed spirits say, aga gals. The climate varies in icits going to Egypt. The climate varies in Screet localities. In the plains the summer at is very great, and the British triops suffered

when first stationed in the leland. Evenly simmer guarters ware housever, found in it lills; and, owing to the entopresses of various spatiage measures, the deshi-rate of the who mitery m island is nearly as low as that of any lineap

country.

Cyprus was formally annexed to the British Empire in 1924. The inhabitants have been granted a political franchise, every-more paring direct taxes having a vote. The government, is administered, under the Colonial Office, by a Titch Commissioner anniated by a Legislative High Commissioner, assisted by a Legislative Council composed of 28 members, 6 heing official and ze elected. The island is divided into three electoral districts, each returning one Muhammaden and three Christian members.

For administrative and legal purposes it is divided into six districts. In each district the executive government is represented by a commissioner; and each has a Court of Law pressided over by an English judge, who is assisted by two native judges, one being a Christian and the other a Muhammadan. There is also a Supreme Court for the whole island, consisting of two English judges.

The capital is Nicosia (Lefkosia), near the entre of the island, with a population of slogs in 1911; the other principal towns are Larmon (population 9, a66), Limassel (20, 200), Famagunta (3 27), Kyrenia (1, 276), and Paphos (2, 425), Important works at Famagunta have rendered

the inner harbour accessible to steamers, and narrow-gauge railway connecting the harrow with the capital (36 miles) was opened in 1995, and was extended to Morphon, as miles, in 1987, and to Evrychou, 15 miles, in 1982. There is a and to Evrychou, 15 miles, in 1925. The regular service of steamers from Egypt.

## EAST AFEIGA PROTECTORATE. See KENYA. PALKLAND ISLANDS

These, the only considerable cluster in the South Atlantic, ile about see miles east of the Straits of Magellan, between gr gr-gg 8. lst. and gr 46-66 W. long. They consist of East Falkland (area g.eee sq. miles), West Falkland (area g.eee sq. miles), West Falkland so sq. miles), and upwards of zee small islands (islets, rocks, and sandbanks), comprising in the aggregate 6,500 sq. miles, and a population in 1916 of 3,250. Mount Adam, the loftiest peak in the colony, rises s,arg feet above the level of the sea. The Falklands were discovered by Davis in sgoe, and visited by Hawkins in 1994. After having successively belonged to France and Spain, they were given up to Great Britain about 1791, but not actually occupied. In 2800 the Argentine Republic established a settlement in these islands, which was destroyed by the Americans in 1821. In \$23 they were again taken possession of by the English for the protection of the whale-fishery, and colonised, being the most southerly organised colony of the British Empire. On Dec. 8, 1924, a British squadron under Adm. Sir Doveton Sturdec defeated a German squadron (von Buee) off the Fakkland Islands. The climate, though somewhat bleak, is usually considered healthy, and the temperature is on the whole equable, the thermometer ranging in winter from 20' to go', and in summer from 40° to 65°. The islands are chiefly bog-land, and have proved suitable for sheep; kitchen-gardens occupy the only cultivated part, with the exception of one station situated in a sheltered position on the West Falkland, where a considerable crop of hay is grown. The population is mainly British and is principally engaged in sheep-farming and seafaring industries. The chief exports are whale-oil and guano, wool, tallow, hides and sheepskins. The only important settlement is Port Stanley, at the head of Port William, on the coast of East Falkland.

SOUTH GRORGIA, an island Soo miles east-southcast of the Falkland Group, with an area of z,coo square miles, is a dependency of the Falkland Islands. Among other dependencies are the South Shellands; the South Orkneys (on which the Argentine Government have, with the permission of H.M. Government, established a meteorological station, in connexion with a discovery that a cold winter in the Weddell Sea is a precursor of drought in the maise and cereal area of Argentina 31/2 years later); the Sandwick Group; and a part of the mainland of the Antarctic, known as Graham's Land.

#### FIJI.

This is a group of see to ago islands (of which some are, however, mere uninhabited islets and rocks) in the South Pacific Ocean, about z,zee ricks) in the South racine Ocean, about 1, 200 miles north of New Zealand, which extend 300 miles from east to west, and 300 north to South, between 15<sup>1</sup> 45<sup>2</sup> - 31<sup>2</sup> 10<sup>2</sup> S lat, and 300 miles from east to west, and 300 north to South, between 15<sup>1</sup> 45<sup>2</sup> - 31<sup>2</sup> 10<sup>2</sup> S lat, and 300 miles from 100 miles. The islands are of volcanic origin, with lofty mountains, and well wooded. The principal are Viti Levu (Great Mill) and Vanus Levu (Great Land). The climate is equable and remarkably healthy for Europeans: the average temperature in the shade in the cool season is 72°, rising to \$4° in the hot season, extremes lying between 60° and 94°. Vegetation is remarkably luxuriant, and 64°. Vegetation is remarkably luxuriant, the chief productions being the bread-fruit tree, banana, plantain, pea-unts, yams, and dalo (taro), coco-nut, sugar-cane, rice, maize, and cotton. The principal exports are sugar, copra, hananas, trocas shell, molasses, rubber, malse, hides and pelts, and beche-de-mer. The Governor is appointed by the Crown, and is assisted by an Executive Council consisting of 6 members. Laws are passed by a Legislative Council (of which the Governor is president) containing as nominated members (one specially representing Indian interests), 7 elected members, and a native members, appointed by the Governor. Native administration is carried on through the chiefs under the Governor's supervision. The population (Dec. 31, 1917) was estimated at 165,931 (21,033 native Fijians, 61,123 East Indian immigrants, 4,824 Europeans, and some Polynesians and others).

#### GAMBIA.

The West African river Gambia, which is navigable for some 300 miles from its mouth, was dis-covered by the Portuguese in 1447; and in 1588, the year of the Spanish Armsda, Queen Elizabeth, heing then at war with Spain and Portugal, gave a charter to a British Company to trade with the Gambia, and as early as 1618 an effort to do so was made, but it was not successful. In 1666 a fort was built upon a rocky island, and, in honour of the new King, was named Fort James; but the English merchants had formidable rivals in the Portuguese and French, and it was not until 1763 that the river was recognised, by the Treaty of Versailles, as British. The Colony had no regular political institutions until 1807, when it was put under the Government of Sierra Leone. The Colony of the Gambia was created in z843. and was constituted a separate government in Mary, British Kombo, Albreda, the Ceded Mile, MacCarthy Island, and various observed and territories on the banks of the river. The total area is estimated at 4,132 sq. miles. The population of the Island of St. Mary, at the Census of April 2, 1911, was 7,700, and that of the Protectorate 138,401. The climate is unhealthy Protectorate 136,401. The climate is unhealthy during the rainy season, viz., from June to October; but during the rest of the year it is less unhealthy. The chief export is ground nuts, which form seventy per cent. of the total exports. They were sent chiefly to Marseilles, where the oil is extracted and used for the same purpose as olive oil, but, since the outbreak of war, the export trade has been mainly with the U.K. Beeswax, palm kernels, hides, and calabashes are also exported; and rice, cotton, maize, and a kind of millet called kous are produced in the countries bordering the Gambia, but not in sufficient quantities to meet local requirements. The chief imports are cotton goods, kola nuts, rice, soap, spirits, hardware, sugar, wine, and tobacco. A Company of the W.A.F.F. (4 officers and monocommissioned officers and men) is stationed non-commissioned officers and men) is stationed in the Colony, and there is an armed police force in the settlement (numbering 9s men), which performs both civil and military duties. The government, which is that of a Crown Colony, is visited in a Governos, andsted by an Excentive Council consisting of 3 official members (besides the Governor), and by a Legislative Council of 5 official members, made 3 unofficial members, madellikated by the Crown. illitated by the Crown

#### GIBRALTAR.

a rocky promontory, a 1/2 miles in length and 1/2 of a mile in breadth, and 1,396 feet high at its greatest elevation, near the southern extremity of Spain, with which it is connected by a low isthmus. It is about 14 miles distant from the opposite coast of Africa. Gibraltar was captured in 1704, during the war of the Spanish Succession, by a combined Dutch and English force, under Sir George Rooke, and ceded by the Treaty of Utrecht, 1713. Since that time it has remained continuously in possession of the British. Of the many attempts to retake it, the most celebrated was the great siege in 1779-83, when General Elliott, afterwards Lord Heathfield, held it for 3 years and 7 months against a combined French and Spanish force The town stands at the foot of the promontory on the N.W. side. Gibraltar is a free port, and enjoys the advantages of an During the year 1919 extensive shipping trade. 6,833 vessels entered, with a total tonnage of 13,737,959. The chief sources of revenue are the 13,737,959. The chief sources of revenue are the port dues, the rent of the Crown estate in the town, and duties on wine, spirits, tobacco, and beer. There is an enclosed harbour with an area of about 400 acres, three graving docks, and docking accommodation for the largest battleships in the British Navy. The civilian population (Census of April, 1921) was 19,120

The Governor is in command of the garrison, and exercises all the functions both of government and legislation, there being no executive or legislative council.

GOLD COAST.

The Gold Coast Coast.

The Gold Coast Colony comprises a portion of the coast of the Gulf of Guinea from about 3° y' W. to 1° 24° E. of Greenwich, with a protectorate extending inland to an average distance of 440 miles, or to the 1° 0′ N. latitude, bounded on the west and morth by the French colonies of the Ivary Coast and French Soudan, and on the east by the German colony of Togolsand. The total area of the colony and its dependencies is estimated at Sagas as sailes. The population (Consus of April a, 2911) was: Gold Coast Colony, Say, 26°; Askentia, 289, 284; Northern Territories, 387, 23°; total, 1,291,385, of whom about 1,000 are Europeans. The natives are almost all Pagana, but the number of Muhammadans and Christians is steadily increasing. The Castle and settlement of Elmins was founded by the Portuguese and taken from them by the Dutch. In 1678, some English merchants tulk a fort at Kormantyne, and subsequently many forts and factories were established by the English and other nations. The first English company to trade with the Gold Coast was chartered in 1865. This was succeeded in 1872 in the Royal African Company, which calesqued and strengthened Cape Coast Castle unstil it was the best on the coast, and also built forts at Dircove, Sekandi, Kommonada, Anganaho, which was constituted by Act of Enrichment, with Herty, to trade and form, establishments on the West Coast of Africa between as Nand ao' S. lat. The cettlements were in 1821

transferred to the Cours, and placed under the government of Sherra Leone, from which they were finally separated in sips under the tiple of Gold Coast Colony. The Davich and Roglish forts were interminged until sips, when an exchange was effected which gave all those on the west of the Sweet River to the Setherlands, and those on the east to Great Britain. In sips the Dutch transferred all their forts to Great Britain, which had previously, in sigs, bought the Danish forts. It was out of this transfer that the Ashanti war of 1873-4 arose, as the Eing of Ashanti, who had always been on good terms with the Dutch, feared that he would be cut-off from the sea.

The trade is principally with the United Kingdom. Gold is found in considerable quantities, and disamonds were discovered in 1979; there are also large deposits of high-grade manganese. The principal exports in 1979 were: cocoa, £8,78,000; gold and gold dust, £1,03,760; palm kernels, £2,3,248; and kola nuta, £32,249. The chiral imports are textiles, building materials, provisions, kerosine, and hardware. The climate, generally, is hot and moist and very malarious, but is becoming annually less melacility by the aid of medical science and semication. The Government assists the missionaries in educational matters, and has established acheois of its own. Great efforts are being made to improve the smitzy condition of the cost towas. The principal towns are lighted and policed. The total tonnage of shipping entered and cleared in 1919 was 1,592,593; [British 1,242,729], in 1925, 932,994 (British 932,854), asion miles of telegraphs have been established in the colony, of which 290 miles are in Ashauti and 202 miles in the Northern Territories. There is a wireless telegraph station at Accra. A Government railway runs from Sekondi through Tarkwa, the centre of the gold-mining industry, to Kunnai (185 miles). Another fine runs from Accra to Tato (65 miles), and further developments are being surveyed.

The seat of government is Accra\* (population 19,283). The other principal towns are: Cape Coast (1,250), Ada (2,372), Elmina (3,570), Schondi (9,222), Tarkwa (2,426), Kwitta (2,520), Akim (2,252), Kumasi (2,832), Saltpend (2,520), and Winnehah (9,240). The government is administered by a Governor, alded by a nominated Executive Council. There is a Legislative Council of raofiticial and 9 unofficial members.

#### HONG KONG.

to 30 days.

The Crown Colony of Hong Kong consists of a number of islands situated off the southeasters coast of China, at the mouth of the Canton River, in sa' xo'—sa' 34' N. lat. and say' sa'—xa' 30' E long., and of a portion of the mainland.

Hong Kong is an island about to miles long and from z to 6½ miles broad, with a total area of 3z square miles; it lies close to the mainland, being separated at one point by a narrow strait (Lyeemooi) not more than a quarter-mile wide, and was first cocupied by Grazi Reitain in January, right, and was formally ceded by the Treaty of Naukin in zag; British Kooloon was subsequently acquired by the Peting Convention of zago; and the New Zerritories, being a peninsula in the southern part of the Kwangtung province, by a lease signed June 9, 1892. The whole solony sted population (sess) of sea, fee, of

whom ser, one were Chinese. The non-Chinese residents, excluding naval and military, rumbered about 12

The capital of the colony is Victoria, which lies along the northern shore of the island, facing the mainland; and between the mainland and the mainiang; and setween the mainiang asset the city is the harbour, which is one of the finest in the world, with a water area of some to square miles. With the exception of liqua-and tobacco the port is free, and is fortified. It possesses excellent docks, capable of holding the largest vessels for the purposes of repair. There is a considerable ship repairing and construction industry. Shipping entered, (1918) 14,759,003 tons; (1919) 17,363,741 tons. A railway, of which 23 miles belong to the Government, runs from Kowloon to Canton; the length north of the Sham Chun River (which is the houndary of the British territory) is controlled by the Chinese Government. A light railway runs through the fertile valleys of the north-east portion of the New Territories from Fanling to Sha-Tau-kok, a distance of miles. Good roads connect the principal districts with the railway.

The island is broken in shape and mountainous, the highest point being Victoria Peak, which is about 1,800 feet high. The Peak District is a favourite place of residence, and is reserved for The hot season lasts from May to During the winter mouths, from Octoher. November to March, the climate is cooler, drier, and more invigorating. The average daily maximum temperature ranges from 87 in July to 83° in February, and the average daily minimum temperature from 78° in July to 33° in February. The average annual rainfall is 84 in., of which no less than 75 per cent. falls between May and September, when the S.W. monsoon prevails.

Hong Kong is the centre of a vast trade in many kinds of produce, chiefly camphor, coal, cottons, flour, gunnies, hides, iron and steel goods, leather, matches, oils, rice, silks, sugar, tea and tin.

Much encouragement is given by the Government to education in the colony. In rose there were 576 schools subject to Government supervision, attended by 25,786 pupils. The University (opened in 1922) includes faculties of medicine, engineering, and arts.

Hong Kong is a Crown colony, and its govern-

ment is administered by a Governor, aided by an Executive Council of 8 members, together with a Legislative Council of 14 members, including himself, a representative from the Chamber of Commerce, and a representative of the Justices of the Peace. There is also a Sanitary Board, partly elected, which controls all sanitary measures.

#### TAWAIGA.

aboriginally Kaymaca, or Land of Wood and Water—an island situate in the Caribbean Sea, about 90 miles to the south of Caba, within 27 42"—36" 32" North lat. and 76" 21"—76" 21" W. long. It is the largest and most valuable of the British West Indian Islanda, being 244 miles in length and 91 nextreme breadth, containing an area of 4,450 square miles, and a population, in April, 1922, of 821,383; the whites numbered 15,605; coloured, 163,201; blocks, 59,282; Rast Indians, 17,386; Chinese, a.211; hot specified, a.905.

Jamaios was discovered on May 2, 1494, h) Columbus, who called it St. Jago. It was taken

Jamacos was encovered en say 3, 1994, i) Columbus, who called it St. Jago. It was taken possession of by the Spaniards in 1905; but in 1953 a Stitish expedition, sent out by Oliver Cromwell, under Penn and Venables, attacked the island, which capitulated after a trifling registance. In 1950 it was formally celled to

England by the Treaty of Madrid.

From the sea-level on all sides of Jamaica a series of ridges gradually ascend towards the central ranges, dividing the large rivers, and attaining, in the culminating Peak of the Blue Mountains, in the eastern part of the island, an elevation of 7,388 feet. From these mountains at least 70 streams descend to the north and south shores, but none are navigable except the Black River, and that only for small craft. There are several excellent harbours, and the island is inter-sected by good roads. There are ros miles of railway open. Telegraph stations and post offices are established in every town and in very many villages; the number of accounts open in the savings banks was 40,393 (1918) Most of the staple products of tropical climates are raised. Sugar and rum are manufactured and exported; the latter is still counted the best in the world , and the coffee raised in certain districts of the Blue Monutains fetches the highest price that is given in the London market. There is an There is an extensive trade in fruits, chiefly bananas and oranges, with the U.S.A and U.K. Maize and Indian corn grow luxuriantly. The Guinea grass, from four to six feet in height, grows wild, and is superior to any other for pasturage, while the woods furnish an abundance of rich dyestuffs, drugs, and spices, and the forests abound

 The Government publishes annually a Hamilest of Jamasa, full of information respecting the history and personnel of the island.

in the reset of cabinet woods. The Governor is assisted by a Privy Council not to exceed a members; the Legislative Council consists of the Covernor, the Senior Military Officer, the Official Secretary, the Attorney-General, the Director of Public Works, and the Collector-General (all ex officio), and of such other persons, not exceeding zo, as the King or the Governor may appoint, called Nominated Members, and 14 elected by the people, being one for each parish of the island. The island is divided into three counties, Surrey in the cast, Middleaex in the centre, and Cornwall in the west. The principal city is Kingston, the seat of government and the largest port and town, pop. (Census. zorx) 57,373; the next in importance are Spanish Town, pop. 7,219; Montego Bay, 6,616; and Port Antonio, 7,074. Chief exports (1917): Fruit, £349,000; coffee, £126,976; sugar, £704,050; dyc-woods, £159,173; jimmento, £71,685; rum, £58,739; cocos, £127,853; minor products, £732,662. 2986-17 Public general revenue . £1,154,349 £1,052,485 Exponditure from income. 1,076,237 1,008,400 Public debt..... 3,811,246 3,797,273 zez6 3,107,004 3,343,865 Total imports................. KRWYA

Menya, formerly "The Hast Africa Protoc-torate," includes the whole of the coast from the Finha to the Juba River, as also the wast territories in the interior bounded in part by international conventional lines. The eastern bedridary was defined along the Jude and north-east by an agreement with Italy (1891), and on the north by an agreement with Abyasinia in sook. On the west the Colony adjoins Uganda, and on the south the Portuguese colony of Mounnibique.

A great portion of this vast region consists of pasture lands or barren wastes, but there are not lacking extensive districts of great natural fertility on the coast, as well as in the interior The Colony is divided for administrative purposes into eight provinces, which are sub-divided into districts and sub-districts: (z) Seyidie, (a) Ukamba, (3) Tanaland, (4) Jubaland, (5) Kenya, (6) Naivasha, (7) Nyanza, and (8) Northern Frontier District, of which the centres of administration are respectively Mombasa, Nairobi, Lamu, Kismayu, Nyeri, Naivasha. Kisumu, and Moyale. Of the provinces Ukamba and Naivasha are best suitable to colonisation by Europeans. There is also a considerable region still undeveloped, and not yet included in any administrative district. The population of the Colony has been estimated lately at 4,000,000, but no accurate census has ever been taken. Its area is approximately 200,000 square miles.

Kenya also includes the With Protectorate, a small tract of country at the mouth of the river Tana Witu is regarded for administrative

purposes as part of Tanaland.

Mombasa, which is connected with Europe by telegraph, possesses perhaps the finest harbour on the east coast of Africa (population, about 30,000, of whom 300 are Europeans). There is also telegraphic communication along the coast hetween Mombasa and Lamu, and between Momhasa and Entelbe, the capital of the Uganda Protectorate. There are also extensions radiating from the main Uganda Railway tele-graph system to Taveta, Fort Hall, West Kenia, Atchers Post, Southern Masai Reserve, Eldama Bavine, Kericho, Ussin Gishu, Machakos, Kisii and Mumias; also telegraph connexion between Mombass and Tanga Radio-telegraph stations exist at Mombase and Kismayu. The Uganda Railway has its terminus at Mombasa, which is connected with the mainland by a railway bidge r,ya feet in length Nairobi, the capital of the Colony, and central station of the Uganda Railway, has a population of about 25,000, of whom r,soo are Europeans. There are also some 400 European farmers in the immediate neighbourhood of Nairobi.

The principal exports are hides and skins, grain, rubber, fibre, and copra; the principal imports are piece-goods, rice, grain and flour, building materials, European provisions, &c.

The importation of arms and ammunition is prohibited, except under the most stringent regulations, and the introduction and local manufacture of spirits is also heavily checked.

#### (z) ANTIGUA (AND BARBULA).

Antigua is the seat of government and residence of the Governor-in-Chief. It lies in 27° 6' N. lat. and 6x' 4g' W. long., and is about 70 miles in circounference. Its area is nearly 108 square miles, equal to 68,950 acres, of which nearly 17,000 are under-cultivation. The population (with Barbuda) in more was ge, seg, including ra, seg males and re, set females. Bettled by the kinglish in reas, and granted to Lord Willoughby by Charles II., the island has always been more distinctively Emglish. It is much less hilly and wooded than the other Leeward Islands, and is largely given up to the cultivation of sugar, for which two central sugar factories have been erected. Cotton is being planted, and the island also exports molasses, tamarinds, and arrowroot. In March, 1868, the Crown Colony system of government was instituted.

Burbuda is situated 30 miles N. of Autigua, of which it is a dependency, in lat. 17° 35' N. long. 62° 42' W. Area, 62 square miles. Population, 2,000. The island is flat and fertile in parts, producing cotton, corn, pepper, tobacco, and vegetables, and was formerly a possession of the Coddington family. Wild deer are plentiful and afford excellent sport, and there is good tarnon and other fishing.

Magistrate, O. Nugent. Manager, Capt. G. Downing.

Redonda, a small island with a phosphate industry, has a population of about so.

#### (a) ST. KITTS-NEVIS (WITH ANGUILLA).

The islands of St. Kitts, Nevis, and Anguilla were united in zeen to form one Presidency, and taken together they had a population at the Consus of agrz of 43,303, and a total area of about 230 square miles. The climate is decidedly nge square miles. The climate is decidedly healthy for the tropics, the temperature being from 75° to 85°. from 75° to 85°.

St. Kitts, the principal island of the Presidency,

and the oldest colony in the West. Ind stanted in lat. 19' 15' N. and long, 40' 15' W comprises an eres of 35 square miles, its gr th being as miles, and greatest t gandles. It is one of the most effectively said sugar islands in the West Indies, a cont ne of green estates sweeping up all rous coast from the seatowards the central or ies to a height of 3,722 feet (Mount Misery). The capital, Benesterre, pop. (1921) 6,199, is a port of registry, and had so vessels of 1,289 tons in 1928.

Nevis (separated from St. Kitts by a stant

some 3 miles wide) has an area of 50 square miles, with a population in sgrs of 12,495. Sugar-cane and cotton are grown. Its greatest eleva-tion is 3,596 feet. Chief town, Charlestown.

Pop. (1911), 912.

Anavilla is about 60 miles N.W. of St. Kitts. 15 miles in length, and varies in breadth from 1 to 3 miles, containing an area of 38 square miles.
Population (2913), 4,075. ('otton is the principal product, and small stock are raised.

#### (3) DOMINICA,

the largest island of the colony, and the loftless of the Lesser Antilles, is situate between zg'ze'. zg'' ag''. I at. and 6° zg'-6-2' ze''. long. gg miles 8. of Antigua, and is about zg miles long and 15 broad, comprising an area of sqr sq miles, or 186,240 acres, of which about 70,000 acres are under cultivation. The island is of volcanic origin and very mountainous and picturesque, abounding in streams fairly well stocked with fish, and the soil is very fertile. The temperature varies, according to the altitude, from ago to The cultivation of sugar has been practically replaced by cocos, limes, coffee and fruit. The population was estimated at 40,315 on Dec. 31, 1919; included in this total are 400 Cariba, of whom 100 are of pure blood. The climate is of whom zoo are of pure blood healthy, and during the winter months very pleasant. Yellow fever is unknown, and from November to June the island is suitable as a health resort for silectuary and rheumatic invalids. There is an executive Council composed of official and unofficial members, and a Legislative Council consisting of the Administrator, who sits as President, and 6 official and 6 non-official members nominated by the Governor. The principal towns are Roseau, on the southwest coast, population about 7,000, and Portsmouth, population shout risco.

#### (5) THE VIRGIN ISLANDS,

a group of islands belonging chiefly to Great Britain and the U.S.A., form a connecting link between the Greater and Lesser Antilles. Such of the islands as are British became so in 1656; the principal are—Tortola (the largest), situate in 16° 27' N. lat. and 64° 46' W. long, Virgim Gorda, and Anegada. The area of the British possessious is 58 square miles, and the population in spr was 5,56s. There is good pasturage for cows, sheep, and gosts. Sugar and cotton are grown in increasing quantity; fishing and poutry-rearing are also carried on. A valuable mine of copper has been worked at Virgin Gords. The capital of the group is Road Town, on the south-east of Tortola; population (1921), 4xo.

#### WALATA.

A THE FEDERATED MALAY STATES, Speed States are situated on the mainland of in liming Seminaulas and are closely connected with the Straits Settlements; they consist of the States of Perak, Selanger, Neigri Sembilian, used Bahang, which have by thesty (1889) tenswell their engagements with the British Government, and are administered under the active of a Chief Secretary to Government, with Basishant in each State, subject to the instructions of the High Commissioner, who is also Governor of the Straits Settlements. The total area of the Federation is 27,623 square miles, with a population in 1921 of 2,05,599. The principal towns are Kusia Lumpur (Sel.), 1994, 45,728; 190h (Pk.), 23,976; Taiping (Fk.), 19,855; Kampar (Pk.), 2,69; Seremban (N.S.), 8,667; Kiang (Sel.), 7,62; and Teluk Anson (Pk.), 5,92.

The first three States are on the west coast, and extend from the border of Frovince Wellenbry that that of the independent State of Johore. Pahang is on the east coast. All are governed by their native rulers under the above-unsutdoned control.

There are z,ex miles of railway, all constructed from revenue, including the Johore State Eniony (120½ miles), which is leased from the Johore Government. There is through communication between Penang and Singapore. The West Coast Railway, through Kedah and Perlis, connects with the Southern Siamese Railways and affords direct communication with Bangkok. Eventually, the journey between Bangkok and Penang will take 55 hours by rail instead of 6 days by sea. The East Coast Railway (now under construction), through Pahang and Kelantan, will also connect the Federated Malay States and Siamese railway systems. There are a,455 miles of road, and z,555 miles of bridle-jaths, while the principal rivers are mayigable for small boots.

One of the regions contributing targety to the raw products of the British Empire is the Malay Penissula, and the most productive pertion of the peninsula is that embraced by the four Federated Malay States. The territory is greatly endowed by having tin and plantation rubber as its two richest products, but the figures given below show that it has other exports of great value.

With the growth of the rubber industry, there has been a tendency to neglect some of the older products of the country, such as indigo, coffee, sugar, and pepper; and it may be mentioned that as recently as space no less than 420 tons of pepper and 9,322 tons of sugar were exported from the Federated Malay States, apart from what was exported from other States of the poninsula. Gold has always been found in small quantities, chiefly in Pahang, and the export in 1919 amounted to 15,402 oz., compared with 15,675 oz. in 1918, 16,967 oz. in 1918, 16,767 oz. in 1918, 16,767 oz.

The following table shows the relative importance of the exports from the Kederated Malay States over a period of three years:—

Rubber Tin and tin ore	53-573 21,055 8,708 2,728	50,983 25,489 20,542 1,380 794 385 276	2,305 2,240 2,268 446

#### MALTA.

an island in the Mediterranean Sea, 58 miles from Stelly and about 280 from the African coast, about 27 miles in length and 3 in breadth, and having an area of 31% square miles. The colony includes also the adjoining island of Gozo, with an area of 34% square miles; COMINO—the site of the Sultans disaster in 1889 and now a sanitary station—and several islets. The estimated civil population of the whole group, on April z, 2928, was 224, 223. In religion the Maltese are Roman Catholics. The lower orders are mainly Punic in race. The Maltese dialect, which is generally spoken, is of Semitic origin, and is held by some to be derived from the Carthaginian and Arabic tongues. The upper classes are mostly descen-dants of those who sought the protection of the Order of St. John during the Middle Ages, from all parts of Southern Europe. They speak English and Italian. There is a Maltese order of nobility consisting of 29 families.

The climate, although not tropical, is very hot summer. The mean temperature for the summer months in 1917 (June, July, August and September) was 7612. In winter the range is from 50.6 to 58.8. In 1917-18 the highest temperature in the shade was 936, and the lowest 41's

The islands are highly cultivated. The chief products are corn, oranges, melons, grapes, forage, cummin seed, onions, and potatoes; figs and hone are plentiful. The principal occu-pation of the people is in connexion with shipping, about 8,000 females being occupied in making lace.

The principal harbour is one of the finest in the world; it is very deep, and large vessels can anchor alongside the shore. It is an important port of call for vessels passing to and from the East and the Suez Canal, being about half-way between Gibraltar and Port Said. There is an extensive arsenal and important dockyard, Malta being the headquarters of the Mediter-ranean Fleet; and an additional graving dock was opened on Feb. zs, zēga. There is also a hydraulic dock, originally constructed by private enterprise, which has been taken over by the Admiralty. Two new day doom and both arms of the breakwater at the mouth of the principal harbour have now/been completed:

Citta Vecchia, the fermer content it hadies untains the molent pales of the content

ment.

The island of Malta is said to have been converted to Christianity on the occasion of the shipwreck of St. Paul in \$8 A.D. In the Dark Ages it was taken by the Meors, its commerce was destroyed, and it was used mainly as a base for piratical expeditions. In seco it was again brought under Christian rule, being con-quered by the Norman Count Roger of Sicily. For 440 years it followed the fortunes of that kingdom, but was in 1930 handed over to the Knights of St. John, who made of it a stronghold of Christianity. In 1965 it sustained the fumous siege, when the last great effort of the Turks was successfully withstood by Grand Master La Vallette. The Knights expended large sums in fortifying the island and carrying out many magnificent works, until they were expelled by Napoleon in 1798. The Maltese rose against the French garrison soon afterwards, and with the assistance of some British and Neapolitan transa, compelled the French to capitulate in 1800. The islands were then ceded to Great Britain, the cession being confirmed by the Treaty of Paris of 1814.

The government is administered, as regards Imperial affairs, by a Governor, who is usually a distinguished General, assisted by an Executive Council. Under the Constitution of zoes there is an elected Legislative Assembly for purely local affairs, which are controlled by a Ministry responsible to the Legislature.

In 1917-18 the Port of Valletta was entered by 457 vessels (tonnage, 563,301).

Mauritius is an island lying in the Indian Ocean, ggo miles east of Madamacar, between 57° 27'-57° 46' E. long. and S. lat. 29' 58'--ao' 33', and comprising an area of 700 Muare miles. The permanent population at the Census of 102x was 370,393. of whom ag, 100 were Indians, the majority born in the Culouy, and the remainder mainly of French or mixed descent.

Mauritius was discovered between the years 1507 and 1526 by the Portuguese, but they never formed any settlement on it. The Dutch visited it in 1998, and named it Mauritius, in honour of the Stadiholder, Prince Maurice of Nassau. In 2644 they established a small colony on the shore, but in 1710 they abandoned the island, and in 1715 the French took possession of it and changed the name to lie de France. Under the French it became a great centre of trade, but in 1769 the seat of French Government in the East was removed to it from Pondicherry, and it was taken by a British force in 1810. The French language and French law have been preserved British rule when the ancient name, Mauritius, was restored.

Of the total cultivated area of soq.o6s arpents 168,670 are under sugar, 20,000 under fibre, and so, 355 under other crops; the necessaries of life have all to be imported from abroad. Rice and grain are obtained from India, flour and from meat from Australia, oxen from Madagascar, and minor imports from South Africa and elsewhere. The chief trade of the island is with India. Being just within the tropics it has a hot climate; but, except in Port Louis and some of the low-lying districts, it is not unhealthy. The island is subject to cyclonic disturbances, and a herricane in som was particularly severe.

There is no excellent harbour on the N.W.; cost, on which the capital, Fort Louis, stands, and the annual trade of the island passes almost entirely through Fort Louis. The shipping entered and cleared, in large, smounted to 648,385 tons, or which 56 55 per cent. was Erithin, It apps there were 142½ miles of railway (129½ of, 4 ft. 8½ in, gauge and as of a ft. 6 in.), for post-offices, sy telegraph and 45 Government telephone offices in the island, with 665 miles of telegraph, including block telegraph for the railway, and 14s miles telephone wires (Govern-callway, and 14s miles telephone wires (Govern-callway, and 14s miles telephone wires (Govern-callway, and 14s miles telephone wires (Govern-callway, and 14s miles telephone wires (Govern-callway, and 14s miles telephone wires (Govern-callway, and 14s miles telephone wires (Govern-callway, and 14s miles telephone wires (Govern-callway). railway, and 14s miles telephone wires (Govern-

The Government is administered by a Governor, aided by an Executive Council of four official members, and of such other persons in the service of the Government as the Governor; through instructions of the Secretary of State, may from time to time appoint, and a Legislative Council of sy members, eight being ex-ofice, nine nominated by the Governor, and so elected by a moderate franchise Port Louis has two members, and each of the country districts one

The inhabitants of European descent are mostly Roman Catholic. Education has two branches :- (z) Superior or Secondary Instruction, to which is attached the Government Royal College and the Associated Schools; (2) Primary Instruction, consisting of the Government Instruction, consisting of the tovernment schools and the grant-in-aid schools. The total expenditure on education in span-zp amounted to Ra. 679,649. Of the pupils in the Government and aided schools, 3p per cent. are Roman Catholics, 2 per cent. Church of England, 2 per cent. other Christian denominations, 22 per cent. Muhammadaus, and 27 per cent. Hindus

#### DEPENDENCIES OF MAURITIUS.

(2) Reprintives, use miles almost due cant of Mainfelia. Population (Consus 1912), 4,800. Area, 40 square miles. Cattle, beam, sait fail, and goat are the principal exports. The island is under the administration of a magistrate from Mauritius, who takes his orders from the Governor of Mauritius.

Magistrate, L. Ulooq ..... Rs.8,000 to 9,000 (a) OTHER DEPENDENCIES. Most of the scattered groups of coral islands belonging to Great Britain in the Indian Ocean are administered by the Mauritius Government, being visited periodically by two magistrates, whose duty it is to inquire into the condition of the labourers, and settle any disputes which may be referred to them. The chief product is coco-nut oil. most important is Diego Garcia (pop. 1911, 517), one of the Chagos Archipelago, which lies on the direct route from the Red Sea to Australia, and, as it possesses a good harbour, has been much used of late years as a coaling station. The total population of the "Other Dependencies" (1922) is 2,344. Transit from London to Mauritius, as to 30

days.

#### MESOPOTANIA

Mesopotamia, "the land between the rivers" (Euphrates and Tigris), extends from Kurdistan on N. and N.E. to the Persian Gulf on the S. and S.E., and from Persia on E. to Syria and the S.E., and from Persia on E. to Syria and the Arabian Desert on W., the approximate position being between 27½° to 28½° E. long., and from 37½° to 30° N. lat The territory was freed from Turkish rule during the War of 1924-18 by Anglo-Indian and British Dominion troops under Generals Nixon, Maude and Marshall (Gen. Mande succumbing to cholera after the capture of Baghdad). Under the Treaty of Peace with the Allies (1920) Turkey renounced the syvereignty over Mesopotamia and its future administration has been entrusted to Great administration has been entrusted to Great Britain by the Supreme Council of the Allies.

The total area of the districts comprised within the British Mandatory Sphere is about x50,000 sq. miles, the distance from Basra in the south to Mosul in the north being approximately 500 miles. The sphere comprises the former Turkish vilayets of Mosul, Baghdad and Basra. At the Census of reso the population was ascertained to be 2,849,282, as under:--

Baghdad vilayet	٠	1,360,304
Basra vilayet	•••••	785,600
Mosul vilayet		703,378

Total ..... 2,849,282

The Baghdad vilayet includes the Baghdad, Samarra, Diyalah, Kut, Diwaniyah, Shamiyah, Hillah and Dulaim Divisions; Basra vilayet includes Basra, Amara and Muntafik; and Mosul includes Mosul, Arbil, Kirkuk and Suleimani. (Mossi covers a great part of the ancient king-dom of Augusto, the rains of the Assyrian capital being visible on the banks of the Tigris, opposite

Mosul.)
Of the total population there were in see rank, 55 Sunni Mehammadam, 2,64,65 Shifte Mihammadam, 2,65 Jews, 35,50 Christians, and 43,30 other religious.

Mesoputants is capable of support lation many times in excess of inhabitants if irrigation is develop Impatiants it irrigation is developed and a tended. In seel vertain works were undertaint felicwing on the report of Sir W. Willocoks, a since the British occupation notable improvements have been effected; the Irrigation I partment is at present confining itself to am and immediately remunerative schemes. wealth of the country depends entirely upon agricultural development, and two harvests can be gathered in the year, the chief crops being wheat, barley and beans, and rice, peas and Indian corn; wheat averages 454lb, per acre, barley 5ralb, and rice over years. acre, cariey Szalb., and rice over n.eealb. In spar-sp there were n.e.g., cos acres (deriving their water from the Tigris and Euphrana) under general cultivation, an increase of 64 per cant on the ward 64 per cent. on the previous year. Cotton growing is a developing industry and it is es mated that Mesopotamia could yield make bales annually if sufficient labour is forthcoming. The country is being opened up and existin communications improved and secured. School hospitals and dispensaries have been established under British auspices. Basra was equipped with wharves, railway sidings, dc., for military purposes, and is thus suited for commerce. The chief imports are textiles, sugar, and tea, and the chief exports are dates and piece goods.

The Euphrates (which has a total length of 1,800 miles from its source to its butflow in the Persian Gulf) is formed by two arms, of which the Murad Su (415 miles) rises in the slopes of the Ala Dagh, a mountain of Eastern Erzerum, and flows westwards to a junction with the Kara Su, or Frat Su (e73 miles), the latter rising in the north-west of Erzeroum is the Dumlu Dagh. The Tigris has a total length of z,zgs miles from its source to its junction with the Euphrates at Garmat Ali, 70 miles from the Persian Gulf, and rises in two arms south of the Taurus mountains, in Kurdistan, uniting at Til, where the boundarie of the vilayets of Diarbekir, Van and Bitlis

conjoin, The Baghdad Railway .- In 1899 the Anatolian Railway Company obtained a concession from the Sultan of Turkey for the construction of a railway from Konieh (the eastern terminus of the Anatolian Railway), to the Persian Gulf at Koweit, vid Baghdad, a total length of z. spe miles, with a single track of 4 ft. 8 k in gauge. Its projected course was from Konieh to Adams. thence S.E. to Aleppo, Jerablus (where it would cross the Euphrates and enter Mesopotamia), and Mosul, and thence S. down the right bank of the Tigris to Baghdad and the Persian Gulf. As this scheme was under German control the British Government (on account of the parameters in the Persian Gulf of British Iwdia) declined to be a party to it, and a new financial scheme was substituted in which so per cent of the capital was to be German and so per cent. French, while the Basra section of the line was to be under British control. The first section Konish-Eregii-Buiguriu (284 miles), was opened in Oct. 2904, and at the outbreak of the War of 2914-28 about 1,200 miles (out of the total of rigge miles )were in operation, with gaps in important sections (notably in the hills M. W. at Airpao, and in the Mesopotanian desertw. 6:8. of Mean). The line creases the Eugineharun a-wooden kridge at Jerahim. At Aleppe them is a connexion with the Phyrims' line from Medium. (through Damesons and Etims to Aleppo) and, when completed, the railway, will be served by the spin of Alexandretta (Jekanderun) in the French in andatory sphere of Cilleis. The first through train from Sakra to Saghdad left Fasra on Jan. 22, 2500. The total length of line open at that date was aga miles compared with 1,112 miles during the War, some uniunportant line having heard aince the ceasation of having been disused since the cessation of hostilities with Turkey, The chief city is Baghdad, the former capital

of the Abbasside dynasty, one of the Caliphs of that dynasty being Haroun al Raschid of "the Arabian Nights." Baghdad has an estimated population of 170,000, other towns being Basra, g.coo, and Mosul (opposite the site of Nineveh),

#### MIGERIA

The Colony and Protectorate of Nigeria includes the territories situated on the Bight of Benia, between Dahomey on the west and the Kameruns on the east. The Protectorate is in two main divisions, the Northern Provinces and the Southern Provinces, of which the northern reproductives. group coincides with the former Protectorate of Nortifern Nigeria, and the southern group with the former Protectorate of Southern Nigeria. The headquarters of Government is at Lague. The area of the whole territory is 236,000 R( 26,500,000 6.000 sq. miles, and the population roughly

The chief industry is agriculture, and crops consist of cotton, cocoa, ground-nuts, maize, guinea-corn, millet, rice, coffee, yams, cassava, and tobacco. The natural products experted are palm oil and kernels, gum copal, rubber, managany, stee-nuts, hides and skins, and the export of ground-nuts is steadily increasing. A considerable industry has arisen in connexion with tin-mining in the Northern Provinces. The Udi coalfields are of great extent and the deal is of excellent quality. A railway is in operation between Leges and Kano, a distance of 705

miles. Branch lines run from Minna to Baro (on the Niger), and from Zaria to Bukuru. Another rallway line runs from Port Harcourt, at the head of the Bonny estuary, to the coal fields at Ud (rgs miles) and further railway extensions. Abookuts, Thedan, Oshogho, Hlorin, Zuris, Kano, Onitsha, Lokoja, Warri, Bonuy, Sapele, Calabar, Opobo, Foroados, and Port Harcourt. The principal imports are cotton goods, pro-

visions, spirits, hardware, cutlery, cycles, kero-sene, tobacco, building material, sosp, and

haberdashery.

#### MYASALAND PROTECTORATE.

This country was proclaimed a British Protectorate on May 14, 1891 The Protectorate compuses the eastern alore of Lake Nyassa and the Country southwards nearly to the Zambesi.

The population of the Protectorate is estimated at r,ary,roy, including 724 Europeaus and 407 Asiatics, and it has a total area of 30,573 square milea

The principal exports are cotton, tobacco, chillies, coffee, ground-auts, fibre, and tea. The cultivation and export of cotton and tobacco are considerable, and there are prospects of a steady development of these industries. Ivory and rubber are also experted. The principal imports are soft goods, provisions, and distri-ware. On Lake Nyasa there are seven steamers.

There are also twenty-three steamers on the Zambest and Shire rivers plying between Chinde and the railway ferminas. At this day of the railway ferminas. zames and other rivers by my eleven comments and the railway terminus. At Chinde, situated in Postuguese territory at the mouth of the Zambesi, is a piece of land leased from the Portuguese Government, where goods intended for the Protectorate may be transhipped free of

Chief towns:-Blantyre (population about all Europeans and 7,000 natives) and Zomba, the headquarters of the Government. A railway from Port Herald (the "inland port" of the Protectorate) to Blantyre (223 miles) is open for An extension from Port Herald to Chindro on the Zambesi (61 miles) was opened to traffie in 1915, and further extensions to Beira and to Fort Johnston, on Lake Nyasa, are pro-jected. Main roads and "carrier" roads are open all over the Protectorate, the total mileage

being 3,425.
Mails to and from England are despatched every week vid Cape Town and Beira. Between Chinds and Europe the means of communication are the Union-Castle Mail 88. Co., Messrs. Rennie's Line vid Natal, and the British India Steam Navigation ('o. The Protectorate is con-nected by telegraph overland with the Cape will Fort Salisbury, and, with the Portuguese wires, to Chinde and Quilimane. The African Trans-Continental Telegraph Company's line has now been extended northwards as far as f jiji on Lake Tanganyika.

(7) There are also a large number of scattered groups and isolated islands.

#### PALESTINE AND HAIFA.

Palestine and Haifa, extending from the Mediterraneau on W. to an eastern boundary formed by the Wady Arabah, head Sea, River Jordan and Sea of Tiberias, and from the Egyptian frontier on S. to the French Mandatory Sphere of the Great Lebanon on N., include and the former of the Great Turkish vileyet of Jelanon part of the former Turkish vilayet of Lebanon and the sanjak of Jerusalem (El Kuda). This district is under British administration since the conquest of the country by the forces of Goueral Allenby in 1928, and consists of a W maritime lowland, the mountain region of Judah (which forms the backbone of the district) and, on the R., the depression through which the Jordan wends its way from the Ses of Gallies (Thorian) to the Dead Ses. The Dead Ses, appe feet below the level of the Mediterranean. is 46 miles long and has an average width of signification; it receives the waters of the Jordan and of six other rivers, and has no outlet, the surplus being carried off by evaporation. Its water is intensely salt and has a specific gravity one-sixth greater than water, with at per cent. of salt. (The Great Salt Lake of Utah, U.S.A., is so miles long and so miles wide, at 4,s18 feet above mean sea level, and contains as per cent. of salt.) The country is generally fertile, and wheat, wine, olives and various fruits are produced, while sheep and goats thrive in the lowlands (and in the mountains during times of drought). The area of the Mandatory Sphere is about 7,000 square miles, with a population of about 200,000, of whom 90 per cent. are Muham madans, 3 per cent. Christians and 7 per cent. Jaws. The chief ports are Acre, Haifa and Jawa. The chief ports are Acre, Haifa and Joppa. There are railways from Haifa running N. to Damasous and E. acruss the Jordan, and from Joppa to Jorusalem; these are connected by the "Milk and Honey" line running N. from of the Egyptian frontier (the ralls being carried agnoss the Sues Canal on a swing bridge at Kantara), and by a line from the Joppa-Jerusalem railway running N. to the Great Plain of Esdra-elon (or Megiddo), the scene of the final overthrow of Turkiah rule at the decisive battle of Sept. 19,

Palestine and Halts are divided into ze ad-ministrative districts, under Governers (Haifa, Gallies, Joniu, Nablus, Tulkeram, Jeffs, Jeru-sellon, Gaza, Robran and Berraceka). Arabic,

English and Hebrew are the official languages of Country. The chief town, Jerusaism (Mill tary Gerernor, Col. Rosseld Storrs, C.M.G., C.R.E.) which has been in Moslem hands since 2244, and under Turkish rule since 2327, surrendered to General Allemby on Dec. 9, sps, to be entered the next day by British troops. The city, which occupies so prominent a place in the affections of the Christian, Muhammalan and Jewish peoples, has been placed under a separate governor, and plans for restoration have been drawn up. The population of the city was estimated in 1929 at 100,000. The Church of the Holy Sepulchre at Jerusalem is visited annually by large hands of Christian pilgrims, principally of The site of the Orthodox and Coptic churches. Solomon's Temple is occupied by the Mosque of Omar, which contains a relic of Mahomet and the sacrificial stone of Abraham. Bethlehem, the scene of Christ's Nativity, is 5 miles S, of Jeru-salem. The Church of the Nativity, at the E, end of the present village, is reputed to be the oldest Christian church in existence. King David was also born in Bethlehem. Nazareth, about as miles S.W. of the Sea of Galilee, had a population of about se,ooo in 1919. Other large towns are Joppa (50,000), Gaza (40,000), Acre (12,000), and Haifa (12,000). The Jewish a hools at Haifa have been purchased from the German Hilfseverein and presented to the Zionist Organization.

#### ST. HELENA.

probably the best known of all the solitary islands in the world, is situated in the South Atlantic Ocean, 955 miles S. of the Equator, 760 S.E of Ascension, 2,240 from the nearest point of the African Continent, x,800 from the coast of S. America and 4,477 from Southampton, in 13° gg'S. lat. and 5°42' W. long. It is 20% miles long, 6% broad and encloses an area of ay square miles, with a population (Census 1911) of 3,500. St. Helena is of volcanic origin, and consists of numerous rugged mountains, the highest using to a 700 feet, interspersed with picturesque ravines. The climate vies with that of Madera in point of salubity and evenness of temperature. Although within the tropics, the south-east "trades" keep the temperature mild and equable. thermometer goes up to 84° in the town at the sea-level; but in the country, 1,800 feet above the sea, the maximum is about 74', and the mean temperature ranges from 57" in September to 66' in March, there being very little difference between night and day; the lowest temperature in winter 1851°, and the total rainfall (1917) 49'43 inches St. Helena was discovered by the Portuguese navigator, Juan de Nova Castella, on May 21, 1302 (St. Helena's Day), and remained unknown to other European nations until 1388. It remained uninhabited until the Dutch colonised it circ. 1645 The English East India Company seized it in 1651; but it was retaken by the Dutch in 1672. Min 1673 it was again taken from the Dutch and was held by the Company, who the Dutch and was held by the Company, who had obtained a charter for its possession from Charles II., until star with the exception of the period six to star, during which the British Government held it as a residence for the Emaperer Napoleon, what died there May 5, star, when it was coded by them to the Orown. It wastformerly as important station on the route to India, but its prespective received a fatal blow by the cutting of the Suez Canal, and it is now frequented only by a few miling this homeword bound from the East Lidles. A phormium (fast fibre) industry and lane-making, both under Government control, were established during

rgs. St. James's Ray, on the north-west of the island, possesses a good sachorage. The government is administered by a Governor, with the aid of an Executive Council of 4 members, the Governor alone making all ordinances. CAPITAL, Jamestown. Population (1911), 1,416.

#### SIERRA LEONE.

The peninsula of Sierra Leone, situated on the West Coast of Africa, was ceded to Great Britain in 1987 by the native chiefs for the purpose of being used as an asylum for the many destitute negroes then in England. At a somewhat later date the Colony was used as a settlement for Africans from North America and the West Indies, and great numbers of Africans rescued from slave ships have from time to time been liberated and settled there. The Colony has a coast-line of azo miles, with an estimated area of coast-time of architect area of the coast-time of architect area of the coast-time of time of the coast-time of time of the coast-time of time o Freezown. In 1896 a Frocetorate was declared over the territory adjoining the Colony to the northward and eastward. The extreme depth of the Protectorate from north to south is about are miles, lying between yo and 10° N. lat., and the artreme breadth from east to went is along miles, between 20° 40° and 32° as' of W. long. Its estimated area is 27,000 ag, miles, and its population about 2,200,200. The administrative purposes it is divided into g districts, under

District Commissioners; the principal peoples being the Limbas and Exmanton in the north, the Townes in the centre, and the Moudis in the south.

The principal exports are palse kernels, held nuts, and palm oil; but giager, stansava, hides, and rice are also exported. The value of the pain kernels exported is suspecented \$1,325,55. The chief imports are cotton goods, coal, apparel, hardware, provisions, and tobseco. Freetown, the capital, possesses the fitness and most important hardware in West Arthus. most important harhour in West Africa.

A railway runs inland from Freetown to Pendembu, a distance of say miles, and a branch line no miles in length extends in a north-easterly direction from Bola to Kamabai. By the extension of the railway and the development of a system of roads in the Protectorate, it is estimated that the output of Sierra Leone products into the European market is capable of being more than doubled. There are sag miles of combined telegraph and telephone service.

Sierra Leone is a Crown Colony, possessing a Legislative Council nominated by the Crown, and having full power to legislate for the Pro-tectorate as well as for the Colony. The Governor is advised by an Executive Council.

## SOUTH AFRICAN HIGH COMMISSION.

High Commissioner for South Africa, Major-General H.R.H. Prince Arthur 

Patton... ... 

Jones, C.M.G. ...... Private Secretary, C. Dalby.

The High Commission.—The office of High Commissioner, which was formerly combined with the Governorship of Cape Colony, was by a Commission issued in 1900 vested in Lord Milner, by a similar Commission issued in 1905 in Lord Selborne; since 1916 it has been vested by a separate commission in the successive holders of the office of Governor-General of the Union of South Africa. The High Commissioner is Governor of Basutoland, and supervises the affairs of the Bechuanaland Protectorate and of Swaziland, and he exercises the control provided by Order in Council over the Administration of the British South Africa Company in Southern and Northern Rhodesia. The Southern Rhodesia Order in Council, 1898, and the Northern Rhodesia Order in Council, 1921, provide respectively for a control by the High Commissioner over legislacontrol by the right Communioner over learning tion, important appointments, and Native Affairs in Southern and Northern Rhodesia, and for the appointment of a Resident Commissioner, who is paid from Imperial funds and acts as the local representative of the High Commissioner and the Imperial Government.

## THE BANGPOLAND, STORE OF ALL (The Territory of Bueuteland)

Mantoland Wan inland Native Territory of South Africa, bounded North and West by Cranan Free State, East by Natal, and South by Cape Colony, with an area of xxxxx square miles. The Census of xyxx showed seg.rzz natives and xxxxx

The territory is well watered, and enjoys a good climate. It is one of the finest grain producing districts in South Africa, and the abundant grees enables the Basuto to rear immense herds of cattle. The Maiuti Mountains, forming a part of the great Drakensberg chain, occupy most of the country, which is elevated, broken, and rugged.

The territory is governed by a Resident Com-missioner under the direction of the High Commissioner for South Africa, the latter possessing the legislative authority which is exercised by proclamation. The chiefs adjudicate on cases between natives, with a right of appeal to the magistrates' courts, where all cases between Europeans and natives are brought. The revenue Europeans and natives are brought. The revenue is derived from Customs, native tax, Post-office, and licences. Telegraph offices have been opened at Leribe, Maseru, Tsyateyaneng, Moriis, Mafetang, Mohale's Hoek, Quthing and Qacha's Nek. There are 390 native schools, with over 30,000 native scholars on the roll, a large proportion being in the schools of the Franch Protestant Mission; there are also y white schools, with x23 pupils. The amount spent on education in the case was 4 cases. tion in 1919-se was £23,86s. The chief articles of export are grain, wool, cattle, and horses, the imports being chiefly blankets, hardware, and groceries.

#### . BECHUANALAND

## (The Buchyangland Protectorate.)

The Beckmunaland Protestorate is a country of British South Africa, in the centre of the vast tableland stretching north to the Zambesi.

The Protectorate is bounded on the south and east by the Cape and Transvaal Provinces of the Union, on the north and north-east by Bhodesia, Southern Rhodesia, the Zambesi and Chobe (Linyand) Elvers, and on the west by South-West Africa. It is about 40e miles long and ago mile shroad, with a total area of about s.coo square miles. The population at the Census of May 7, 1911, was 125,350, of whom 1,692 were whites

The climate is healthy during part of the year, but mainrial fever is prevalent during February, March, and April. The country is essentially pastoral, although Kaffir corn, mealies, beans, pumpkins and melons are sown, and when the rainfail is adequate crops are reaped. Cattle thrive, and munbered 323,922 at the Census of 1922. Much of the country is thick bush. The The rorr.' Much of the country is thick bush. The High Commissioner for South Africa has the power of making laws by proclamation for the Protectorate, where he is represented by a Resident Commissioner. The population is almost entirely a native one, the principal tribes being those of Khama (Bamangwato), of Linehwe (Rakgatla), of Sebele II. (Bakwens), of Tshosa (Bangwaketsi), of Sebeko Mokgosi (Bamaiste), and of Mathibe (Batawana).

The railway from Kimberley to Vryburg and Mafeking traverses the Protectorate on its way o Rhodesia. There is a telegraph line from Cape Province through from Mafeking, vid Gaberones and Francistown, to Bulawayound Salisbury. The chief European centres are Lobatsi, Gaberones Francistown, and Serowe, whither the Chief (Khama) and all his people moved a few years ago from Palapye The headquarters of the Protectorate Administration are at Mafeking,

#### AREA AND POPULATION.

Southern Rhodesia (Salisbury) 140,000 788,50 Northern Rhodesia (Livingstone) 292,000 942,335 The total area of Rhodesia is about 440,000 square miles, the total population being estimated at 1.729,835 in 280. The territory is named after Cecil Rhodes, the founder of the British South Africa Company, and extends from Lake Tangansika and the Congo watershed in the north, to the Limpopo River in the south.

#### COMMUNICATIONS.

Railways. - The main arteries of commun tion are the Rhodesia and the Mashondland The former is a continuation of the Railways. line from Cape Town to Vryburg, vid Kimberley, and was opened to Bulawayo in November, 2807, the distance from Cape Town being 2,362 miles. A line connecting Bulawaya with Salisbury (302 miles) was completed in Occ.
1902. From Salisbury the Mashonaland Railway runs eastwards to Umtali and is continued by the Biera Railway Companies to the port of Beira (Portuguese), a total distance of 374 miles. The section from Bulawayo rid the Wankie coal- fields to the Victoria Falls (282 miles) was completed in June, 1909. The line crosses the Zambesi at the Victoria Falls, traverses Northern Rhodesia, and, crossing the border (207 miles), extends a further 450 miles of Exambove to Bukama, in the Belgian Congo State/ A branch line of standard gauge (3 ft. 6 in.) runs from Salisbury to the Eldorado mine (6 miles), and has been extended to Shooia (8 miles). A standard-gauge line leaves the Eldorado branch at Mt. Hampden Junction (13 miles from Salisbury) for the Shamva mines (73 miles). A line connects (iwelo with Scinkwe 144 miles); another runs from Bulawayo gid Gwanda to West Nicholson (res miles), opening up the mining district to the south-east; another connects Bulawayo with the Matopo Hills, where the founder of Rhodesia and Sir Starr Jameson are buried, and a branch line from Gwelo to Umvama has been extended to Victoria (223 miles).

Telegraph: — The African Transcontineutal Telegraph Line ("Cape to Cairo") has been constructed as far as URI in East Africa, about 3.age miles from the Cape.

#### SOUTHERN RHODISTA.

Area and Population.—The total area is passed square miles, and the estimated population (said) 785,300, of whom 38,300 are Europeans. The native population is estimated at 730,400, with 4,000 Asiatics and other coloured persons, including those of mixed race.

Constitution.—Southern Rhodesia is administered by the Company under the Charter of Council. The Administrator is advised by an Executive Council consisting of the Resident Commissioner and not less than three members, appointed by the Company with the approval of the Secretary of State for the Colonies. There is a Legislative Council consisting of the Administrator, the Resident Commissioner (ex officio), and 19 members, of whom six are nominated by the Company with approval of Secretary of State, and 13 are elected by the registered voters. A Supplemental Charter was issued on March 13, 1943, giving effect to the arrangement to which the Directors of the Company had agreed to render possible the estab-lishment of Responsible Government in Southern Rhodesia, should the Legislative Council desire it, and should H.M. Government concur at some date other than that the Charter permits.

The laws in force in the Cape Colony up to June ro, rags, were adopted for Southern Rhodesia, so far as they are applicable. Susquent legislation has been by proclamation of the High Commissioner and by ordinances passed by the Legislative Council. Municipal

passed by the Legislative Coulcit. Multibly self-government has been established in Salisbury, Bulawayo, Gwelo, Umtali, and Gatooma. Industrial Progress.—Southern Rhodesia is rich in mineral deposits, and it abounds in traces of the ancient golg-workers. Though the climate is sub-tropical, the average altitude makes it well suited to the control of the country of suited for European occupation, and for the cullivation of European fruit-trees, cereals, and vegetables, in addition to tobacco and the indigenous products of the country. The local breeds of cattle are constantly restocked by

importation of pedigree stock.

The first regular crushing returns began in September, 1898, and the gold produced to December 31, 1919, was of the value of £45,227,791. The output for the year ended December 31, 1917, was valued at 53,495,391. Silver, copper, coal, diamonda, lead, chrome fron, asbestoa, and other minerals have also been produced in considerable quantities.

Administrative revenue, 1919-20 Administrative expenditure, 1919-20	£1,050,379

#### SWAZILAND.

#### (The Swaziland Protectorate.)

Swaziland (called by the natives Kwa Ngwane) lies between the Drakensberg and Lebombo Mountains in British South Africa. The Trans vasi Province forms a boundary on the south, west and north, the eastern boundary being Zululand (Province of Natal) and the Portuguese province of Mozambique (Delagoa Bay). By the Convention of 1894, Swaxiland was placed under the administration of, but not incorporated with, the South African Republic; the British Government now controls the Territory. The total area is 6,678 square miles, and the estimated total area is s, sys square miles, and the envinance population riz, yoo, of whom i, yoo are whites, the remainder being Ama-Swazi Hantus (or Swazis-Swaziland is divitible into three longitudinal regions: the mountainous regions of the west, with an approximate altitude exceeding 4, which are approximate altitude exceeding from the lower; and the Low Yeld, bounded on the east by the Lebombo Mountains, with an average slittude not exceeding r, ooc feet. Except in the Low Yeld the country is well watered and bealthy. Veld the country is well watered and healthy,

A Special Court having the full jurisdiction of a Supreme Court, and Courts of Assistant Commissioners having a restricted juris-diction, have been established Native chiefs continue to exercise jurisdiction according to native law and custom in civil disputes between natives, subject to a final appeal to the Resident Commissioner. The Paramount Chief. Resident Commissioner. The Paramount Chief, Sobhuza, son of the late Paramount Chief Bunu, is about az years of age, and the regency is in the hands of his grandmother, Labotsibeul, widow of Mbandeni.

The numerous mineral and land concessions and moropolies granted by Mbandeni, of which many of the latter carried exemption from Customs dues or invested private individuals with powers properly exercisable by the Crown, rendered satisfactory government difficult. A Commission was therefore appointed under Proclamation to inquire into these consessions and monopolies, and those conferring exclusive rights have been expropriated, compensation being made out of loans raised for the purpose. The Commission also determined the validity and extent of all concessions, and the agricultural and grazing rights of the natives have been fully safeguarded. A general survey of the country took place in comexica with the work of the Concessions Commission and the Special Commissioner.

The soil is generally fertile, particularly so in the Low and Middle Veld. The whole of the Territory forms excellent grazing for ceitile, and cattle-randoling on a targe scale has been con-menced by several companion. There were

about esc, co. thene of ratife in the Territory at the sul of Marah, rese.

In the winter, season, between sga oco and sec, oco sheep are propert to Swariand for grating from the high tenies lands of the Eastern Transval. The agricultural products are tobacco, make (the staple product), millet, pumpkins, ground justs, beans, and sweet potatoes, grown in insufficient quantities to meet local requirementa. Most of the substrained furific can be grown with success. tropical fruits can be grown with success.
Large areas o' land are suitable for growing action, coffee, and tea. The country possesses considerable mineral wealth, including gold, tin, coal, and copper. During the year ended March 31, 1900, 440 tons of cassiterite tin, valued at £66,676, were exported. A few gold mines were being worked on a small scale, but these have had to close temporarily owing to the war.

Mbabane, the headquarters of the Administration, is situated on the hills at an altitude of coo feet. At each of the district headquarters-Hlatikulu, Hatikulu, Stegi, and Pigg's Peak—there is a small number of Europeans in the vicinity of the station, likewise at Bremersdorp, the old headquarters of the Territory. There are eleven schools for Europeans at various centres; and the Government has established a school for natives at Zombode, the kraal of the Regent, at which, until recently, the young Paramount Chief (Sobhuza) attended. There is also a school for coloured children. Grants are also made to the various native missions for educational

purposes
There is a tri-weekly communication by motorcar between Mhabane and Carolina (8s miles) and between Mbabane and Bremersdorp miles). Esewhere the communication is by cart or rumers. There are 14 post offices, and a telegraph office at Mhabane, Pigg's Peak, Bremersdorp, and Esulwent.

#### STRAITS SETTLEMENTS.

The whole of the Malay Peninsula, from the southern boundary of Siam to the Strait of Singapore, is within the British sphere, the administrative groups being the Nvaits Sattlements (Singapore, Penang, Malacca, Lahuan, Cocos Blands, and Christmas Island), the Federated Malay Nates (Perak, Sciangor, Negri Sembilau, and Pahang), the Feudatory Malay Nates (Kelantan, Trangganu, Kedah, Perits or Palit, and Brunei), and the Protected State of Johore.

The Settlements forming what is known as the Colony of the Straits Settlements consist of the island of Singapore (with its dependencies), Penang (including Province Wellesley and the Dindings), Melacoa, the Cocos or Keeling Islands, Christmas Island, and Labuau. These Settle-ments have an entire area of about 1,600 square

ments have an entire are or about 1,000 square miles, wide a population (1927) of 24,069.

The Government consists of a Governor, assisted by an Executive Council of 7 members, and a Legislative Council of 20 official and 2 puefficial members, appointed by the Crown. Two of the suspinels, members are seminated by the thambers of Commerce A. Singapore and Penang respectively. The Resident Councillor of Penang

has a seat in both Councils. The law of the colony is the common and statute have of white, seating the common and statute have of superpose and the project to Swatiand for the place of the Eastern on the high statis-lands of the Eastern on the high statis-lands of the Eastern on the high statis-lands of the Eastern on the land of the Eastern on the land of the Eastern on the land of the Eastern on the Eastern of the Eastern on the Eastern of the Eastern on the Eastern on the Eastern on the Eastern on the Eastern on the Eastern on the Eastern on the Eastern on the Eastern on the Eastern on the Eastern on the Eastern on the Eastern on the Eastern of the Eastern on the Eastern on the Eastern of the Eastern on the Eastern on the Eastern on the Eastern on the Eastern on the Eastern of the Eastern on the Easte Justice and four pulsae judges, and constitutes also a court of appeal, from which there is yet another appeal in certain cases, viz., to the Privy Council. The jurisdiction of the Supreme Court includes that of a Colonial Court of Admiralty. There are also in each Settlement district courts with limited civil and criminal jurisdiction, and the usual police magistrates' and coroners' courts.

The climate of the colony is almost uniform throughout the year, and foliage is perennial. The rainfall in 1914 amounted in Singapore to 85 84 inches, in Penang to 89 54 inches, and in

Malacca to 84'z7 inches.

The railway from Singapore to Bankok was opened for passenger traffic in July, 1918.

The exports comprise—gutta pervia, gambier, pepper, india-rubber, horus, lides, canes, partubber, shells, augo, tapioca, spices, dye-staffs (cutch), cupra, rattans, coffee, gums, tin, preserved pineapples, &c.

The chief imports are rice, augar, cotton piece goods, opium, petroleum, and coal.

Amenarous is an island situated off the southern extremity of the Malay Peninsula, from which it is asparated by a narrow strait shout three-quarters of a mile in width; its length is shout syntiles, and its breadth 14 miles; if comprises, with the adjoining lateta, an area of my square miles. It was first cocupled in rive, and formally ceded to the British Government by the Sultan of Johore in 1814. The seat of government for all the settlements is the town of Singapore, situated on the south side of the island in lat. 1° 16° K, and long, 103° 33° E, with 203,331 inhabitants in 1912. The climate is fairly healthy for Europeans, except for the absence of any marked change of temperature throughout the year. The railway from Singapore to Bangkok was to be open for passenger traffic on July 1, 1918.

The number of merchant vessels entered and cleared in 1919, exclusive of native craft, was 17,248, with a tonnage of 14,085,775. The total for the whole colony was 15,376, with a tonnage of 28,085,775. The total native craft entered and cleared at all four ports, Singapore, Penang, Malacca, Labuan, during the same year was 63,770 (tonnage, 2,565,091). The harbour, in the extent of its shipping, is one of the greatest ports in the world, being a port of call for vessels trading between Europe or India and the Far East, the North of Australia, and the Netherlands Indies, and is strongly defended. The Tanjong Pagar docks and wharves were taken over by Government in 1909 at 200 (opened in 1972) is the largest east of Suez, being 879 feet long, see feet wide, and 24 feet deep; its cost was \$3,500,000.

Singapore is a free port; no duties are levied upon anything except opium, tobacco, spirits, wines, beer, and petroleum consumed in the colony. The trade returns aggregate for zeigleuding inter-settlement trade, amounted to \$2,446,966,248 (including the value of builton and specie for the last half of the year only), the value of exported tin being \$23,446,990.

Labuan is an island of the Malayan Archipelago, situated about 6 miles off the north-west coast of Borneo, in §2 & N. Lit. and 135° 25° E. long., and forms part of the Settlement of Singapere. Its area is about 38 square nilles; and its population is 6,346. It was ceded to Great Britain by the Sultan of Brunel in 1346, being at that time uninhabited. The island has a fine harbour. The experts consist of coal, cloth, rice, sago, earthen ware, brassware, &c. Victoria Harbour, in the south-east, is the principal inlet, and affords good anchorage. There is a cable station of the Eastern Extrassion Telegraph Company on the island. Imports (1919), \$8,10,46; exports, \$5,639,314.

The Cocos-Keeting Islands are a group of about so small islands about 700 miles southwest of Sumatra, and form part of the Settlement of Singapore The population is about 700, and the island exports about 800 tons of copra. There is a station of the Eastern Extension

Telegraph Company on Direction Island.

CHRISTMAS ISLAND, in the Indian Ocean, about see miles south-west of Jave, and yee miles east of the Coos-Keeling Islands, has an area of about 35 square miles and a population of about 2, 30c. A District Office-two stations and the island, which contains enormous phosphatic deposits werked

by the Christmas Island Phosphate Company, The amount exported in 1919 was Errope tense (d)

PERAMOS the northernosis of the Settlemental It includes Penang or Prince of White's "Staind (population, 1921, 1921, 201), on the eastern "steed of which is Georgetown, the port and capital," and the surje of mainland opposite, known is Province Wellesley (population 1921, 1938, 193), and the Dindings. Penang Island, about 13 miles ong and 9 broad, is situated off the west coast of the Malay Peninsula, in 12t. 2 38 N., long, 100 the Malay Peninsula, in 12t. 2 38 N., long, 100 the Malay Peninsula, in 12t. 2 38 N., long, 100 the Malay Peninsula, in 12t. 2 38 N., long, 100 the Malay Peninsula, in 12t. 2 38 N., long, 100 the Malay Peninsula, in 12t. 2 38 N., long, 100 the Malay Peninsula, in 12t. 2 38 N., long, 100 the Malay Peninsula, in 12t. 2 38 N., long, 100 the Malay Peninsula, in 12t. 2 38 N., long, 100 the Malay Peninsula, 100 the most property of the trade of the northern and more property of the trade of the northern and more property of the trade of the northern and more property of the trade of the northern and more property of the trade of the northern and more property of the trade of the northern and more property of the trade of the northern and more property of the trade of the northern and more property of the trade of the northern and more property of the trade of the northern and the Malay Peninsula.

Province Wellesley is a strip of coast about 45 miles in length with an area of \$35 square miles, ceded by the Raja of Eédah in 1598, with some laud S. of the Krian River acquired more recently. The province is in a high state of cultivation as compared with the neighbouring territory, containing rice, spices, tapicca, and rubber plantations.

The Dindings Territory (area 183 square miles, population in 1917, 7,650) has present little developed; but it contains what is considered the best natural port on the western side of the peninsula. The headquarters are at Lumut, where a District Officer is stationed, and steamers call regularly at Pangkor. The territory comprises a group of islands (of which Pangkor to the largest); and a strip of the mainland on the west coast of the peninsula, cut out of the State of Pérak, and measuring about so miles long by about so miles in width.

MALACOA, the largest of the Settlements, situated on the western coast of the peninsular between Singapore and Penang, and about me niles are supported in the Singapore, comprises an area of about you again to the Risk, having been taken possession of by the Portuguese in 152, and held by them till 1649, when the Dutch drove them out. In 1705 it was captured by the British, and retained till 1818, when it was restored to the Dutch; it finally became a British possession. In pursuance of the treaty with Holland, March 17, 1824, being exchanged for the British settlements in Sumatra. The population in 1811 and 1811 and 1811.

1919.) Singapore, distant 8,700 miles ; transit, 22 days. Penang, 20 days ; and Malacca, 23 days.

#### TANGANYIKA TERRITORY.

TANGANTIKA TERRITORY, formerly "German Rast Africa," was attacked by British and South African forces and conquered in 1928, the German forces surrendering near Abercorn in North-east Rhodesis on Nov. 19, 2928. Civil Administration was established party passes with the conquest of the Servicery, and the whole Colony passed under the effective control of the present Administration as the beginning of ages. The country is now divided between the

British and Belgians, the Belgian sphere of compation including the provinces of Reands and Trividit, Bedgering on Lake Tanganyika, with inseducations at Eight.

Responsive Towards to Eight.
Responsive Towards to Eight.
Responsive Towards to Eight over the network strip of sound territory were acquired by Germany in This for a payment of Acce, see marks. The coat-line extends from the month of the Umba to the mouth of the Rovum River.

The native population consists mostly of tribes of mixed Bantu race, and was enumerated for the whole area (Jan. 1, 1943) at 7,58,58,68.

fer the whole area (Jan. 1, 1913) at 7,659,858, the coloured population (other than native) being z<sub>0</sub>.5gs. According to German law every native born after z<sub>0</sub>og is free, but a mild serfdom was continued under German rule. The total white population was 5,225 in 1913. The native white population was 3,356 in 1913. The n population in the British area is about 3,500

Education is not compulsory. In 1913 there were see Government schools, including four for handicrafts, with 18 European and 189 native teachers and 6,277 pupils. Five Protestant and three Roman Catholic missionary societies had

schools with res, see pupils.

Near the coast are forests of mangrove, cocopalm, baobah, tamarind, do., and in the higher regions the acacia, cotton-tree, sycamore, banian and other trees, the area of Government forests being 652,667 acres. There are a number of being 652,067 acres. There are a number of plantations of coco-palms, coffee (on the higher isings, caoutchouc, sugar, cotton, cardamum and cinchous, while fibre plants (especially sisal) are successfully cultivated. In 1912 there were 43,627 cattle, 41,647 sheep and goats in the possession of Europeans, and 3,850,450 cattle and 6,326,350 sheep and goats in the possession of natives. Minerals known to exist within the Protectorate are coal, iron, lead, copper, mica, and salt. Agates, topaz, moonstones, tourmalin, and quartz crystals are found, and garnets in large quantities.

The revenue of German East Africa for the year 1914 was put at £825,500, and the expenditure £1,188,500, and the Tanganyika Territory estimates for igeo-az are: Revenue (Ordinary), £67x,6so; extraordinary (grant-in-ald), £330,000, total, £x,00x,6so; expenditure £x,xxx,609. The imports in 1918-1919 were valued at £x,018,000, and in 1919 so at £1,158,000; the exports were valued at £700,000 in 1918-19, and at £1,426,000 in 1919-20. The chief exports in 1919 so were: Slasi (16,744 tons, £436,000), cotton (1,500,851 lh., £50,000), hides (78,890 cwt., £22,000), skins (4,897 cwt., £20,000), copra (106,673 cwt., £257,000), confee (78,330 cwt., £187,000), ghee Lisago, ool, coffee (18.32 cwt., £187.000), ghee (17.051 00t., £40.000), wax (5.481 cwt., £48.000), ground-nuts (25.485 cwt., £8.000), grain (23.464 cwt., £51.000), aim sim (33.076 cwt., £53.000) rubber (2,241 cwt., £50.000), and ivory (257 cwt., £53.000) the chief imports in 1919-30 were colton piece goods (£524.000), rice (£53.000) other food stuffs (£524.000), kerusene (£53.000), cigarettes (£53.000), tolacco (£37.000), spirits, wine and boort (£50.000). The tated is chiefly with Zanubar, British East Africa and India.

The chief samorte are Dar-19-8-Salanu. Bara-

Zannbar, British East Africa and India.
The chief seaports are Darses-Salaam, Baganoyo, Saadani, Fangani, Kilwa, Lindi, Mikindani and Tanga, but few of these are accessible to ocean-going visuals, though gradual improvements are being introduced. Wide well-kept roads (on some of which rise-Bouss and stores are provided) run all through the optomy. There are two railway lips in the Protectorals—the

Usembara railway from Tanga to New Meet (see miles), commenced in uses and so employed in fich, ness, and the Central railway (she miles from Dar-es-Salaam to Kigoma, completed in Feb., 1914. There are also Government constitu-and lake atomicin. Dar-es-Salaam is in tergraphic communication with the coast towns Zanziber, Mombass, and many inland centres. There are do post offices and telegraph stations. Three Battallons of the King's African Effectage

stationed in Tanganyika Territory.
In 1919-20, 39 steamers (exclusive of coastal boats) of 193,440 tons and 1939 vessels (dhows) of 46,137 tons entered the various portafrom places beyond the territory.

## TOGOLAND.

#### (Joint Franco-British Administration.)

The former German colony of Togoland was conquered by Franco-British forces during the war of 1914-18, and its administration has been entrusted to France and Great Britain jointly by the Supreme Council of the Allied Powers.

Togoland is situated on the Gulf of Guine between the (British) Gold Coast Colony and (French) Dahomey, and is bounded on the south by the Atlantic and on the north by (French) Luper Senegal-Niger, and lies between a sg W.— a° E. long, and 6°-ro N. lat at its extreme limits, the coast line being only at militain extent (z° 24'-x° 38' E. long.). The coast is fringed with lagoons, but for some 50 miles inland are undulating plaius, which end in a plateau, about z.o feet in mean level, with Mount Agu (3,135 feet) and Mount Avaklu (3,39 feet) in the southwest. The country is watered by the Oti, which effects a confluence with the Volta at the western boundary of Togolaud. The area is 33.69 English equare miles, with a population of about The Christian element is small. r,oco,coo. The Christian element is small. Coffee, cooca, cotton, maize, hola and other tropical products are abundantly cultivated; palm oil, palm kernela rubber, coston, maize, ground nuta, vagetable, butter, libre, indign, kola nuta, abouy, and other forast products, and experted (exports, page, file-gast). The impactance of the control of the co ardinare and spirits. The revenue accions the spenditure, and the colony is in a very flourist-agreement. Alsolation miles of railway are ng dentificon. Assum you muse or remany my jets, these visualing from the expital to Anothe is to Elizabethe and Ataleptine. It sais the whole partitory was divided into a widel Sphere and a French Sphere. The British Sphere consists of an area of about

e, now eq. miles with an estimated population of No portion of the coast is included in the British area. The sphere is administered by the Government of the Gold Coast.

#### TRINIDAD and TORAGO.

TRINIDAD is the most southerly of the West India Islands. It is close to the north coast of the continent of S. America, the nearest point of Venezuela being 7 miles distant. It lies between zo 3'-zo so' N. lat d60 sg'-62 s6' W. long., and is about 60 miles in length by 54 in breadth, with an arra of r,86s square miles (359,469 acres cultivated), and a population at the Census of egrated 33, san (including Tobago). The estimated population on Dec. 31, 1916, was 381,309. The island was discovered by Columbus in 1498, was same was enservered by Columbus in 1492, was colosised in 1585 by the Spaniards, and capitulated to the British under Abercromby in 1597. The chief town and port of entry, Port of Spain (pop 574974), is one of the finest towns in the West Indies, with sewerage, electric lighting Indies, with sewerage, electric lighting, tram and telephone services. Other towns of importance are San Fernando (pop. 9,893), about 30 miles south of the capital; Princestown (pop. 4,497), and Arima (pop. 4,000). A remarkable phenomenon is the asphalt lake near the village of La Brea, sue acres in extent, containing an apparently inerhaustible supply; in 1918, 55,799 tous (188.88) were exported. The soil is rich and productive, the most important products being agar, cocca, mineral oil, molasses, rum, copra limes, and cocomute, and various kinds of timber and fruits. The chief exports (1918) were sugar 35, red tons, value £812,068; rum 145,035 galions, value £29,260; molasses 807,168 galions, value £169,363; billers 25,960 galions, yaine £25,560; cocoa 58,638,552 lb. value £25,572; and copra 5,327,932 lb., value £25,722; and copra 5,327,932 lb., value £245,722; and is found in Manzanilla, and is indicated in other parts of the island. The petroleum interaction is made a mode accordance to the control of owner parts of the sisand. In performing matry has made considerable advance, horing operations being carried on by is different companies. There are ma miles of railway open, electric lighting and tramway service, and waterworks and sewage operations have been established. The island is crossed by the telegraph wire of the West India and Panama Comany, by Government telegraph and private talephone wires. There is also wireless tele-graphic communication between Trinidad and Tobage and between Trinidad and Demaran. age and between Trinidad and Demerara. The Government is vested in a Governor, an Executive Council, and a Legislative Council, all of whom are nominated by the Crown.

OIL INDUSTRY.-The development of the oilfields is progressing satisfactorily. The animiter of Companies operating at the close The of sgut was twelve, and other substantial

concerns are preparing to consumence operations.

During 1918, 72,872,368 imperial gallons of crusion oil were extracted, and of this 43,587,500 imbrious the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the manufactured in

#### TRISTAN DA CUMBA

is the chief of a group of islands of volcanic put, 72,572,365 imperial gallons of over entracted, and of this 23,527,000 re expected. Petrol, horseone, and till continue to 10 manufactured in this appropriate integral gallons of prior appropriate integral gallons of inhabitants are said to be very long fived. The

megh is in the north-ite of gerieds of dis-a to leave the island principal activements in a make of genieds of dis-trees the inhabitants assume to leave the laland for the laps of food stops to which they are attracted by office of tent.

Inaccisement littant is a lefty mass of reek with sides a nailes in length; the taland is the resort of penguish and ass-fout.

The Nightingalla littants are three in

'A'm. wide, and rises in two peaks, see and rises in two p little more than huge rocks. Numbers of seals and sea-elephants visit these islands.

GOUGH ISLAND (or Diego Alvarez), in 40° 20′ S. and 9° 44′ W., lies about age miles S.S. E. of Tristan da Cunha. The island is about 8 miles long and 4 miles broad, with a total area of 40 square miles, and has been a Bettish possession since \$25. The island is the resort of penguins and has valuable guano deposits. There is no permanent population.

#### TURKS AND CAICOS ISLANDS.

These West India islands geographically form a sort of annexe of the Bahama group, from which Government they were separated in z848. In 1873 they were annexed to Jamaica, from the north-west of which they are distant about 400 miles. They have an area of about 170 square miles. The population in 1911 was 5,615, of which the principal island, Grand Turk, contains 1,581. Sait is the principal industry of the islands, and Sisal hemp and sponges are exported.

A Commissioner administers the government of the Dependency, assisted by a Legislative Board. This Board has control of local finance, and passes local ordinances, subject to the assent of the Governor of Jamaica, who is also the medium of communication between the Commissioner and the Colonial Office. The Legislature of Jamaica has the power to pass laws applying to the Turks and Caicos Islands, and the jurisdiction of the Supreme Court of Jamaica extends to the Islands in matters of divorce and matrimonial causes, and is also a Court of Appeal.

## UGANDA.

### (The Uganda Protectorate.)

The territories now comprised within this Protectorate came under British influence in 1890, and a portion of them was for a time administered by the Imperial British East African Company. In 1894 a British Protectorate was declared over the kingdom of I'ganda and some declared over the kingdom of Uganda and some of the adjoining territories. The present limits are approximately as follows:—On the north, the Uganda-Sudan possiblery; on the cast, a line drawn down the hiddle of Lake Rudolf, and along the ways boundary of the Colony of End and the castern shores of Lake Victoria on the south by "Imagingitia Entitory (late German East Africa); and estable west, by the

eastern boundary of the Bolgian Songh. All these boundaries lie part of the Motoris Miss the whole of Lake mailbury, market. Lake Victoria to Nimule, where the I Spdan commences. Total area, revigue miles, including 16, 277 square miles of anti-Victoria have been entirely depopulated, and the inhabitants, numbering about so, see, settled on the mainland in fly-free districts.

With the exception of the Rudolf Province and the districts of Karamoja and Lobor, the whole Protectorate is now under direct administration; but the native kings or chiefs, whose rights are in some cases regulated by treaties, are encouraged to conduct the government of their own subjects. The province of Buganda is recognised as a native kingdom under a Köbska (H.H. Daudi Chwa, grandson of the celebrated Mutesa). He is assisted in the government by three native ministers and a Lukiko, or native assembly. In Buganda (and in Bunyoro, Andole and Toro, also ruled over by native "Kinga"), purely native matters are dealt with by the various Lukikos, but in serious cases there is an appeal to higher courts. For Europeans and non-natives justice is administered by His Majesty's Courts. The principal British representative is the Governor, who makes Ordinances for the administration of justice, the raising of revenue, and other purposes. There are local and special courts of justice, and a High Court with civil and criminal jurisdiction. In 1919 there were 2,60x criminal cases tried, 23 of which were cases of serious crime. There is an armed constabulary force, under a British Commissioner of Police and British officers. There is also a volunteer reserve of Europeans.

The total population of Uganda (year ended March 3r, 1920) is given as a,965,350, composed as follows: Natives, 2,957,075; Asiatics, 4,525; Europeans, 947 (including 305 females). Among the natives approximately 785,000 belong to the intelligent, civilised Baganda, a race converted to Christ anity by British and French missionaries. Educational work is undertaken by the various Missionary Societies, who receive grants amounting to £2,225 towards scholarships, etc., for students and teachers. About 270,000 natives speak Bantu languages; there are a few Congo pygmies living near the Semliki river; the rest of the natives belong to the Masai, Nilotic, and

Sudanese groups.

In 1918-19, total exports, £1,24,24,7; 1919-20, total exports, £1,828,537; the import figures are now merged in those of Kenya. The export are now merged in those or neigh. The export trade, which is increasing, is mainly in cotton, £1,209.663 in 1919-20; coffee, £151,714; chillies, £10,821; oil-seeds, £27,865; rubber, £29,472. The trade is chiefly with Great Britain, the United States and India. States, and India.

#### WINDWARD ISLANDS.

The Government of the Windward Islands is made up of the three colonies of Grenaila (the seat of government), St. Vincent, and St. Lucia, with their dependencies, the Grenadines being divided between Grenada and St. Vincent. The total area is 508 square miles, with an estimated population (1980) of 180,18s. There is one Governor for the three islands; but there is no General Legislative Council as in the Leeward Islands, and no common tariff or treasury. Each island retains its own institutions, and in the Governor's absence is governed by an Administrator subordinate to him.

Governor and Commander-in-Chief, Sir G. B. Haddon-Smith, K.C.M.G.....£3,000 Private Secretary & A.D.C.,
Auditor, M. J. Flanagan.....£440 to 550 Staff Officer (vacant) .....

#### GRENADA

#### (AND THE GRENADINES).

Grenada is situated between the parallels of rs° 30'-xx° 58' N. lat. and 6x° 20'-6x° 35' W. long., and is about an miles in length and as miles in breadth; it is about 96 miles north of Trinidad, 68 miles S.S.W. of St. Vincent, and ree miles 8 W. of Barbados. Area, about 85, 120 acres; population (including some of the Gronadines), population (including some or one transmission population (including some or one of the country is mountainous and very picturesque, and the climate is healthy. Grenada was discovered by culturalization in vacal, and named Conception. It Columbus in 1498, and named Conception. It was originally colonised by the French, and was definitely ceded to Great Britain by the Treaty

of Versailles in 1782.
The soil is very fertile, and cocca, spices, rubber, cotton, coffee, and fruit are grown. The forests are rich in timbers. The imports chiefly comprise dry goods, bread-stuffs, hardware, &c. The Legislative Council consists of 14 members, seven of whom are officials.

St. George's, on the south-west coast, is the chief town, and rossesses a good harbour.

#### ZANZIBAR.

#### (The Zanzibar Protectorate.)

The Zanzibar dominions became independent in 1856 under the rule of Seyyid Majid, a son of Seyyid Said, Sultan of Muscat and Zanzibar. They formerly extended along the mainland as far south as Tunghi Bay and north as Warsheikh; but since the cession of the coast-line from Ruvuma to Wanga, including the island of Mafia, to Germany in 1290, and of the Benadir coast to Italy in 1904, they are now confined to the islands of Zanzibar and Pemba, a ten-mile coast-line from Wanga to Kipini, the islands of Lamu, Manda, Patta, and Siwa, together with the port of Kismayu, with a radius of ro miles. As far as the mouth of the Juba, the Zanzibar dominions on the mainland are under the administration of H.M. Government through the Governor and Commander-in-Chief in the Rast Africa Protectorate (q.v.). Zanzibar has been a British Protectorate since November, 1890 On July 1, 1913, the Protectorate was transferred from the Foreign to the Colonial Office.

By a decree of Sultan Hamoud (1897) the legal status of alavery ceased to be recognised in the islands of Zanzibar and Pemba.

As the centre of the Arab power, Zanzibar, from the beginning of the nineteenth century until quite recently, dominated the trade of East Africa. The island contributes comparatively little to the actual commerce of the world beyond a very considerable export of cloves, beyond a very considerable capons of corresponding worth on an average £300,000 per annum, but it serves as a "gigantic go-down" or storehouse for the whole East African coast, where both imports and exports are received and distributed.

Of late years the importance of Zanzibar as a port of transhipment and distributing centre and invest of transhipment and distributing centre.

has largely decreased, owing to the development of the mainland, to the opening up of the seast ports to direct steamship service with Europe, and to the transfer to Aden of the seat of wade with the Benudir coast. Recent figures, how-ever, tend to indicate that the island, in spite of losing the main transhipment trade; will continue, from the very fact of its geographical position, to retain control of the local traffeof that portion of the trade which goes to small towns up and down the adjacent mainland coast,

The principal imports are piece-goods, ivory,

300

loopes groceries, rice, and toni; the exposts are leary, cloves, copra, hides, gran-sopal; and many miles articles.

The large quantities of goods which pass through Zanzibar in mail and other steamers, and those which are transhipped to and from the coasting vessels in the harbour without being landed, are not included in the statistics from which the above figures are taken, which do not, therefore, give anadequate idea of the importance of the port of Zanzibar as the centre of trade in E. Africa. There is direct communication with the United Kingdom by the Union-Castle and cargo service by the British India Steam Naviga-tion Company. There are through steamers to and from Europe of the Messageries Maritimes. Maritima Italiana and Portuguese Government Line, and a bi-weekly service to and from Bombay.

The city of Zanzibar, on the island of the same name, is the largest in East Africa, and possesses a magnificent harbour, which presents great facilities for shipping and trade generally. The population of Zanzibar and Pemba (Census of 1910) was 198,914, the area of the former 640 square miles, and of the latter 380 square miles.

The number of ocean-going steamers which entered the port in 1919 was - British 74, French 12, Norwegian 5, others 14, the total tonnage being 440.737; and 4,714 dhows (82,334 tons) entered the port in 1919.

#### IMMIGRATION.

Statistics concerning the arrival of aliens are available for nearly a century, but the Government exhibits little interest in those who leave its shores. From 1790-1917 33,108,353 alien passengers arrived in the U.S. The following figures (from the Statistical Abstract) show the number of arrivals at certain periods from 1280-1918:—

YEAR.	IMMIGRANTS.	YEAR.	IMMIGRANTS.

#### BIRTHS AND DEATHS

There are no complete statistics of Births or Deaths. The former are practically ignored, while the latter are reported only in the "Registration Area," which covers little more than half the United States. The following table shows the Deaths recorded in the Registration Area for the decade 1927-1926:—

	YEAR.	DEATES (Reg. Area).	YEAR.	Deates (Rog. Area.)

#### PHYSIOGRAPHY.

The Republic occupies the southern portion of the North American Continent, between the Atlantic and Pacific Oceans, in latitude 250-490 North and longitude 670-1240 30' West, its northern boundary being Canada and the southern boundary Mexico.

Its coast-line on both oceans has an estimated length of about 15,610 miles, besides 3,620 miles on the great lakes and 5,744 on the Gulf of Mexico. The principal river is the mighty Mississippi-Missouri, traversing the whole country from north to south, and having a course of 4,500 miles to its mouth in the Gulf of Mexico, with many large affluents, the chief of which are the Yellowstone, Nebraska, Arkansas, Ohio, and Red Rivers. The rivers flowing into the Atlantic and Pacific Oceans are comparatively small; among the former may be noticed the Hudson, Delaware, Susquehanna, Potomac, and Savannah; of the latter, the Columbia, Sacramento, and Colorado. The Mobile and Colorado of Texas fall into the Gulf of Mexico, also the Rio Grande, a large river partly forming the boundary with Mexico. The areas of the water-basins have been estimated as follows :- Rivers flowing to the Pacific, 644,040 square miles; to the Atlantic, 488,877; and to the Gulf of Mexico, 1,683,325 square miles, of which 1,257,547 are drained by the Mississippi-Missouri. The chain of the Rocky Mountains separates the western portion of the territory from the remainder, all communication being carried on over certain elevated passes, several of which are now traversed by railroads; west of these, bordering the Pacific coast, the Cascade Mountains and Sierra Nevada form the outer edge of a high table-land, consisting in great part of stony and sandy desert, and in which occurs the Great Salt Lake, extending to the Rocky Mountains. Eastward the country is a vast, gently undulating plain, with a general slope southwards towards the marshy flats of the Gulf of Mexico, extending to the Atlantic, interrupted only by the Alleghany Mountains, of inferior elevation, in the Eastern States. Nearly the whole of this plain, from the Rocky Mountains to some distance beyond the Mississippi, consists of immense treeless savannahs and prairies of luxuriant grass. In the Eastern States (which form the more settled and most thickly inhabited portion of the territory) large forests of valuable timber, as beech, birch, maple, oak, pine, spruce, elm, ash, walnut; and in the south, live oak, water-oak, magnolia, palmetto, tulip-tree, cypress, &c., still exist, the remnants of the wooded region which formerly extended over all the Atlantic slope, but into which great inroads have been made by the advance of civilisation. The Mississippi valley is eminently fertile. The mineral kingdom produces in great abundance iron copper, lead, zinc, and aluminium; the non-metallic minerals including immense quantities of coal, anthracite, petroleum, stone, cement, phosphite rock, and salt. Precious metals include gold and silver, raised mainly in Colorado, California, and Alaska (gold), and Colorado, Montana, Utah, and Idaho (silver); while precious stones are worked in great variety,

#### HISTORY.

including the turquoise, sapphire, tourmaline, and garnet.

EARLY COLONISATION.—A natural factor, the great expanse of ocean which divides the American continent from Asia, has saved America from Asiatic domination, and it required many centuries of progress before the European adventurer dared to attempt the passage of the narrower Atlantic. The aboriginal inhabitants were comparatively few in number, and being generally backward in development, except in Mexico, have left few permanent traces

Although Columbus discovered America in the afficenth century (Oct. 12, 1402), American bistory may be said to commence with the colonising expeditions, from American bistory may be said to commence with the countries, varying and Europe in the sixbeenth and seventeenth enturies. But definite European set themedia was attempted and it the last quarter of the sixteenth century, when England, Holland, Swedam France, and Spain made determined efforts to bring into account the putchtial wealth of the newly discovered continent. Of these nationalities the English secured a pathonomic influence, through their natural aptitude for colonisation, which continues to distinguish that race (and iff a greater degree the Scotch) amongst the nations of Europe. In the seventeenth century a chartered company founded Jamesloven (1607), and many Royalist settlements were established in the district which had been named Virginia, after Queen Elizabeth, in the previous century. But step by step with the Church and Royalist foundations in the South a similar series of Puritan and Separatist centres was established in the North. The small band of "Pligrin Fathers" in their 180-ton Mayflower, from Southampton, England, to Plymouth, Massachusetts (1620), was soon followed by a stream of well-to-do merchants from Boston, Lincolnshire, and other east coast English towns, and New England became rapidly prosperous. Between these two settlements the Dutch had established themselves in New Netherlands (1621), and the Swedes in New Sweden (1638). Other English foundations were Maryland (1632), Carolina (1663), New York (1664), New Jersey (1665), and Pennsylvania (1681). From that date Continental enterprise may be said to have ceased for half a century, and Georgia (1732) was the last of the English settlements.

Eighteenth Century.—A continuous struggle was waged between the English and French settlements in America, but until the War of 1754-1763 little part was taken by Great Britain in the actual campaigns. The issue of this war decided the fate of America. It secured the possession of the Pacific coast for the inhabitants of the Atlantic slope, and roused the interests of the British Government in the possibilities of its American colonies. The Home Government endeavoured to recover from the colonies part of the cost of the war by which their existence had been secured, but "taxation without representation" was bitterly resented. In December, 1773, some English ships laden with tea arrived in the harbour of Hoston, where a non-importation agreement was strictly enforced. A band of colonists, disguised as Indians, boarded the vessels and threw their centents into the sea. This Boston Tea Party of December 16, 1773, remains as an outstanding incident in the quarrel between America and Great Britain. In spite of the counsels of Chatham the King persisted in repressive measures, generally with inadequate forces and at inopportune moments. The colonists resisted in arms, and bloodshed ensued at the first engagement at Lexington, April 19, 1775, and continued until the Capitulation of Yorktown, October 19, 1781, when Lord Cornwallie surrendered with the whole of his forces to General Washington. When peace was concluded. Sept. 3, 1783, between America and Great Britain, no vestige of territory over which the dispute had raged remained under British rule.

The Declaration of Independence.—On July 4, 1776, the delegates of the various American colonies adopted the Declaration of Independence.\* "We, the representatives of the United States of America, in Congress assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, solemnly publish and declare that these United Colonies are, and of right ought to be, Free and Independent States." This Declaration was at length acknowledged by Great Britain, and the United States of America from this beginning has become one of the greatest Powers of the world. The Peclaration of Independence was followed by the framing of a Constitution, which was ratified in 1787 to 1790 by the 13 Original States (Delaware, Pennsylvania, New Jersey, Georgia, Connecticut, Massachusetts, Maryland, South Carolina, New Hampshire, Virginia, New York, North Carolina, and Rhode Island). This Constitution established a legislature of two houses, and vested the executive power in an elective President, and on April 30, 1780, George Washington

entered office as the first of a line of Presidents of the United States of America.

NINETKENTH CENTURY.—The maritime war of Britain and France led to the outbreak of hostilities between the former and the United States, owing mainly to the rival interpretation of the law of allegiance in connexion with impressment of British subjects from American ships to serve in the British Navy. On June 18, 1812, the United States declared war against Britain, in which the latter was generally successful on land and the United States almost invariably victorious on the sea. A land engagement at Chateauguay on October 26, 1813, gained lasting glory for the troops of Canada, and earlier in the same year—June 1, 1813—a duel at sea between the Chestpeake and the Shannon did much to restore the prestige of the British Navy. Peace was concluded by the Treaty of Ghent on December 24, 1814, after a purposeless war, which Canada alone has reason to remember with satisfaction.

<sup>\*</sup> On April 30, 1879, the Balcigh (N.C.) Register published the following document, said to have been adopted by the Committee of Mecklenburg County, North Carolina, on May 22, 1775, the day after the receipt of the news of the lattle of Lexington. "In the third session of the Second Continental Congress, Richard Henry Lee proposed, and John Adams, of Massachusetts, seconded, a resolutific declaring the United Colonies free and independent States; and Thomas Jefferson, John Adams, Roger Sherman, and Robert Livingston were spicisted a committee to draw up a Beckeration of Independence. This famous document, composed absort entirely by Jefferson, was adopted unanimously on July 4, 2775."

The Gold Rush .- In 1846 a dispute arose between the United States and Mexico in conhexion with the boundaries of Texas, recently (1845) admitted as a State of the Union, and after hostilities of several months the war ended in the Treaty of Guadalupe Hidalgo (1847). Under this treaty Mexico surrendered the disputed portions of Texas and New Mexico, part of Arizons, and California. In 1848 a great rush of goldscekers entered the newly acquired

territory, which remains the principal gold-producing State of the Union,
The Civil War.—Among the industrial classes of America in 1860 nearly 4,000,000 were
negro slaves, descendants of those planted in the Colonies by Britain. The question of their
emancipation led to a bitter dispute between the Northern and Southern States of America. the latter secoding from the Union in 1861. Two years earlier John Brown, an advocate of manicipation, had embittered the relations between the North and South by a raid upon the "Government arsenal of Harper's Ferry, which he captured and held until forced to sug"render; and although he was hanged by the State of Virginia his object was eventually
achieved by President Lincoln's Emancipation Proclamation of January 1, 1863. The
Secession of the Southern States was followed by hostilities, which included many fitched
battles, fought with astounding tenacity and prolific slaughter on both sides. Hostilities
ceased soon after the surrender of General Lee at Appointance on April 9, 1865, and the
bitterness engendered by the war was buried in a lasting peace. By a careless observance
of the Foreign Enlistment Act, Britain permitted the departure from Liverpool of the
Alabama, which committed depredations upon United States shipping, and was also guilty Alabama, which committed depredations upon United States shipping, and was also guilty of other acts of negligence, for which, under the Treaty of Washington, May 8, 1871, Britain was called upon to pay \$2,350,000 damages to the United States. In the four years' war the Confederate (Southern) States lost over 200,000 men by death and disease, while the victorious Federal (Northern) States lost close on 350,000 from the same causes.

War with Spain .- The continuous misgovernment of the neighbouring island of Cuba brought America into conflict with Spain in 1898. A succession of revolts, which the Spanish forces were unable to suppress, left Cuba the prey to anarchy, and induced the United States to despatch to Havana the warship Maine. By accident or design that vessel was destroyed by an explosion (Feb. 15), and the United States declared war against Spain on April 25, The outcome of the hostilities was the freedom of Cuba and the acquisition by the United States of the Spanish possessions in the Philippine Islands, in addition to Guam

(Pacific) and Porto Rico in the West Indies.

Twentieth Century.—On June 28, 1902, Congress appropriated the sum of \$40,000,000 for the purchase of all outstanding rights in the work inaugurated on the Panama Canal, and on April 28, 1924, a further sum was granted for the purchase of a strip of territory on each side of the proposed waterway from the Republic of Panama. Operations were immediately undertaken, and the Canal was completed in 1913, and was opened to traffic with

no inaugural ceremony on August 1, 1914.

Anglo-American Arbitration.—A Treaty of Arbitration between the United Kingdom and the United States was signed at Washington, August 3, 1911. The Treaty contained seven Articles (see 1912 Edition of Whitaker's Almanack). An Anglo-American Peace Commission Treaty was signed by Mr. Bryan and the British Ambassador on Sept. 15, 1914.

War with the Central European Powers .- On April 6, 1917, the United States, after fruitless endeavours to obtain guarantees from Germany that the rights of neutrals on land and sea would be observed, entered the war on the side of France, Great Britain and the Allied and Associated Powers. The first shot by U.S. troops (Oct. 27, 1917) was followed by a full participation in the campaigns of the Allies, and the Armies of the United States contributed very largely to the defeat of the Central Powers. At the date of the Armistice (Nov. 11, 1918) 3,670,888 troops had been placed under arms, and 77,459 were numbered amongst the killed or died of disease, accident or other causes. U.S. troops also figured amongst the armies sent to the assistance of Russia against the Bolshevik regime, but these were withdrawn, in accordance with the plans of the Allies, in 1919.

#### GOVERNMENT.

The United States of America is a Federal Republic consisting of 48 States and r Federal District (of which 13 are Original States, 7 were admitted without previous organisation as Territories, and 28 were admitted after such organisation), and of 2 organised Territories.

THE CONSTITUTION.—By the Constitution of Sept. 17, 1787 (to which ten Amendments were added on Dec. 15, 1701, and eleventh to fifteenth Jan. 8, 1708, Sept. 25, 1864, Dec. 18, 1865, July 28, 1868, and March 30, 1870), the government of the United States is sustained to three separate authorities—the Executive, the Legislative, and the Judicial state of the

Date

#### THE EXECUTIVE.

The Executive power is vested in a President, who is elected every four years, and is eligible for resoluction. The mode of electing the President is as follows:—Each State appoints, in such assure as the Legislature thereof directs (they are now elected by appular vote on the first Theoday after the first Monday in November of the year preceding the year in which the Presidential term expires), a number of electors, equal to the whole number of Senators and Representative, or anyone holding office under Government, shall be appointed an elector. The electors for each state meet at their respective State (apitals on the second Monday of the January following, and there vote for a President by lellot. The ballots are then sent to Washington, and opened on the second Wednesday of February by the President of Senate in presence of Congress, and the candidate who has received a majority of the whole number of electoral votes east is declared President for the ensuing term. If no one has a majority, then from the three highest on the list the House of Representatives elects a President, the votes being taken by States, the representation from each State having one vote. There is also a Vice-President, who, on the death of the President, becomes conficio President for the remainder of the term. In case of the removal or death of both President and Vice-President, a statute provides for the succession of the Secretary of the Treasury. Secretary of War, Attorney-General, Postmater-General, Secretary of Navy, and Secretary of the Interior, so that the State can never be without a Head or Ruley.

The President must be 35 years of age and a native citizen of the United States. He receives a salary of \$75,000, with a travelling allowance of \$25,000. Executive duties:—

(1) He is Commander-in-Chief of the Army and of the Navy (and of the Militias when they are in Federal service), and he commissions all officers therein.

(2) With the consent of the Senate, he appoints the Cabinet officers and all the chief

(and many minor) officials.

(3) He exercises a general supervision over the whole Federal Administration and sees that the Federal Laws are duly carried out. Should disorder arise in any State which the authorities thereof are unable to suppress, the aid of the President may be invoked.

(4) He conducts the Foreign Policy of the Republic, and, with the approval of the Senate,

negotiates Treaties with Foreign Powers. The Declaration of War rests with Congress.

(5) He makes recommendations of a general nature to Congress, and when laws are passed by Congress he may return them to Congress with a veto. But if a measure so vetoed is again passed by both Houses of Congress by a two-thirds majority in each House, it becomes law, notwithstanding the objections of the President.

#### THE PRESIDENT.

President of the United States, Woodrow Wilson, of New Jersey (born at Staunton, Va., 1902. 28, 1856; educated at Princeton Univ. 1875-1879; President of Princeton Univ. 1902-1910; Giovernor of New Jersey 1911-1013, elected Nov. 5, 1912, and came into office March 4, 1913, until March 4, 1917; re-elected for a further term 1917-1921. Democrat.

1. Vice President of the United States (and ex-offices President of the Neutre). Thomas Riley Marchall, of Indiana form 1854, admitted to the Bar 1875, Gov. 61 Indiana form 1854, admitted to the Bar 1875, Gov. 61 Indiana 1909-1013).

#### THE CARINET.

(In order of succession to the Presidency.)

- 2. Secretary of State, Rainbridge Colby, of New York (born 1860), appointed March 22, 1920.
  3. Secretary of the Treasury, David Franklin Houston, of Missouri (born 1860), appointed February 2, 1920.
- 4. Secretary of War. Newton D. Baker, of Ohio (born 1871), appointed March 7, 1916.
- 5. Attorney-tieneral, A. Mitchell Palmer, of Pennsylvania (born 1871), appointed Feb. 27,1919.
  6. Protocoller-General, Albert Sidney Burleson, of Texas (born 1863), appointed March 5, 1913.
- 7. Secretary of the Nary, Josephus Daniels, of North Carolina (born 1862), appointed March 5, 1913.
- 8. Secretary of the Interior, John Barton Payne, of Illinois (born 1855), oppointed March 15, 1920.

Secretary of Agriculture, Edwin Thomas Meredith, of Iowa (born 1876), January 31, 1920.
Secretary of Commerce, Joshua Willis Alexander, of Missouri (born 1852), Dec. 11, 1919.
Secretary of Labour, William Haucho Wilson, of Pennsylvania (born 1860), March 5, 1913.

<sup>9</sup> President-Elect, 1902-1918, Senator Warren Gamalial Harding, Republican, of Phile, horn Nov. a, 1882. Flor-Parident-Mitch, 1922-1928, Governor Calvin Coolidge, Republican, of Masseshizatts.

## UNITED STATES GEOGRAPHIC BOARD, Washington, D.C.

By Executive order of August 20, 1926, the official title of the United States Board on Geographic Names was changed to United States Geographic Board and its duties enlarged. The Board passes on all unsettled questions concerning geographic names which arise in the departments, as well as determines, changes, and fixes place names within the United States and its insular possessions, and all names suggested by any officer of the Government shall be referred to the board before publication. The decisions of the board are to be accepted by all the departments of the Government as standard authority. Advisory powers were granted the hoard concerning the preparation of maps compiled, or to he compiled, in the various offices and bureaus of the Government, with a special view to the avoidance of unnecessary duplications of work; and for the unification and improvement of the scales of maps, of the symbols and conventions used upon them, and of the methods of repre-senting relief. All such projects as are of im-portance shall be submitted to this board for advice before being undertaken.

Chairman, Dr. C. Hart Merriam. Secretary, Charles S. Sloane.

UNITED STATES RECLAMATION SERVICE. Director, Arthur P. Davis, Interior Building, 18th and F Streets, N.W., Washington, D.C. B'estern Office, Tramway Buildings, Denver, \$8,000,000. Colorado.

The Reclamation Service, which employs see people at headquarters and upwards of 5,000 in the West, and controls an expenditure of about \$8,000,000 annually, was organised as a bureau of the Interior Department, under the Reciamation Act of June 17, 1902. It is engaged in the investigation, construction and operation of irrigation works in the arid and semi-arid States of the West Thirty projects have been authorised for construction or operation for irrigation of lands in Arizona, California, Colorado, Idaho, Kansa, Montana, Nebraska, Nevada, New Mexico, North Bakota, Okiahoma, dregon, Sonth Dakota, Texas, Utah, Washington and Wyoming. These projects aggregate 3,200,000 acres, and the major works aid in serving an additional x,000,000 acres under private canals that gauerally get stored water from the government reservoirs. The fauds for this work have come chiefly from the nels of public lands, and the mency expended is returned to the fund by many expenses is returned to the sind by annual instalments without interest, in accordance with the Recknantion Enterests for of METRIC 23, 2904 .

The Service has built on the as projects over races miles of canals; ditches and drafts (in-cliding reaces) canal structures), involving the execution of rejement contents years of materials. In connexion with this work there have been onstructed see storage and diversion dams with an aggregate volume of 32,700,000 cubic yards, lacingding the Arrorrow Jon, the highest in the morid (949 feet), the Elephant Butte Iram on the Lio Grande (forming the largest artificial legigation reservoir in the United States), and the longest roller crest dam in the world located on the Grand River in Colorado. The Service has built of tunuels, 983 miles of road, 82 miles of ratiroad, 3, 142 miles of telephone line, a dozen power plants and 632 miles of transmission lines; and is also mining coal, and has manufactured s.676,000 barrels of cement and sand coment. The net construction cost to June 20, 1919, WAS \$123,853,000.

Over 150,000 persons are living on the 40,000 farms irrigated by the Hervice. Of the 3,000,000 acres above referred to, water is now available for x,800,000 acres, and of this area x,x00,000 seres were harvested in 1919, producing crops worth over \$35,000,000, or an average of over \$30 per acre. The additional lands using stored See per acre. The additional lands using stored water yielded crops worth \$50,000,000 more. The project showing the largest unit returns in 1919 was the Changan in the State of Washington.

with an average of \$367 per acre.
The largest irrigable area is that of the Boise project in Idaho, 29,353 acres, of which the met cost of construction to June 20, 1919, was \$11,973,875. The next is the North Piatte in Ne braska-Wyoming, 251,725 acres; cost \$20,540,005 to June 20, 2919. Information in squard to farma available for settlement may be obtained by addressing Statistician, U.S. Reclamation Service, Washington, D.C.

Public land farm units on the several projects are opened for settlement from time to time as canals are extended to make irrigation water available. Under present law, soldiers of the World War have a preference right to enter these farms, and at recent openings such soldiers

have taken all units.

The Service issues the " Reclamation Record. 48-page illustrated monthly publication, containing articles of interest to irrigation farmers

and engineers. An annual report is also issued.

An appineering library of about 2,000 manuscript and printed volumes on the subject of irrigation is maintained in the Washington office of the Service. This library contains descriptions of the construction and operation of the projects, with numerous photographs and maps, cost data and results of original experi-mants investigations, and is available for consultation by those interested.

## GOVERNMENT PRINTING OFFICE, North Capitol Street, Washington, IAC.

The Government Printing Office was established The Government Frinting Office was established in 1884, and represents an expenditure of close on Sadese, see, the annual cost of operation and maintenance being Sadese, see. In addition to the printing of all Government publications, the office issues a Style Buck, which regulates the spelling and treatment of all words employed in such publications.

The total disbursement in pensions since the War of Independence is \$8,830,818,714, of which \$2.000,448,818 has been paid on account of the Civil War. The cost of maintenance and expenses of administration in 1900 amounted to \$1.000,000.

\$1,peg.oz4.
Blebursements in claims arising out of service
in the World War subsequent to Oct. 6, 2gsy,
are not included in the above totals, as such
claims are adjudicated in the Burean of the War
Blek Inturance, Treasury Department, which
has jurisdiction over such matter.

## **開発・基本マド 9月 を表定しむる**。

The three-year building programme initiated in the Act of August as, 1906, provided for the following construction:—

South and the second	egati	9987.	2015.	Totals
Bostleships	4	3	3	20
Intile Cruisers	7	ī	- 7	6
Secret (Trusteen)	7	_		
Scout Opulaers	4	3		40
Destroyers	#0	15	25	50
Floot Sulmarines	-		•	9
Coast Submarines	20	18	10	🏂
Twel Alaipe				3
Repair ship	-			8
Transport	-	-		1
Hospital ship	. 1			1
Destroyer Tenders		E	1	🙎
Submarine Tender		t		1
Ammunition ships		-	x	
Guabosta			1	8

With the exception of sa destroyers, six of the fleet submarines, and the transport, all of the above are under construction, and a large per-centage of the destroyers and submarines, to-gether with one gunboat and several of the

Auxiliaries, are already in service.

In addition to the vessels listed, so coast submarines were specifically authorised in March agry, and under emergency appropriations made at that time, supplemented by later Acts, six more submarines were purchased in knock-down condition, and orders were placed for agg 33 knot destroyers (six of which were later cancelled), xan Engle patrol vessels undertaken by the Ford Motor Co. (xa for the Italian Government, which were cancelled together with 40 for the Navy), 448 nub-chasers (see being for France and seven others never completed), as floot tugs (six cancelled), sa minesweepers (five cancelled), and as harbour and motor tugs.

There were also built sa large tankers on

Emergency Fleet contracts intended for naval service, together with some so auxiliary vessels acquired by purchase or seignre during the war. Of the Mr sub-chasers built for the Navy, all but arg have been sold, scheduled for sale, or

otherwise disposed of

All information as to characteristics, costs, &c., available for publication concerning naval vessels, may be found in the Ship Data Book,

for any comparisons desired.

No further new construction has been authorised since 1918, the only appropriations made being applied to the building programme already in progress, with the exception of funds provided for the conversion of the collier Jugater into an aircraft carrier, which has been renamed Landey, in memory of a pioneer in flying machine construction, the conversion of aying machine construction, the convertion of two marchant vessels into aircraft tenders, one of which, to be named the Wright, in memory of Wilbur Wright, the first successful aviator, is now in hand, and the conversion of the old battleship Koscearge into a powerful aga-ton crane altip.

#### EDUCATION.

#### State School Systems, 1917-1918.

In spay-of the total number of children in the United Status & to-10 years of age was ny,686,496, off whom as \$23,526 (se,559,466 buys-and as,pas,age office street, entitled in public elementary and

Sz 19.082,044.

## Compulsory Attendance Laws, 1917-18.

Every State in the Union has a compulsory school attendance law. In general, children are obliged to attend school from 7 to 14 years of age, and from 14 to 16 ment, attend school or secure employment certificates. The required attendance each year varies from forty days in one State to the full term in twenty-eight States, Nearly all States have officers charged with enforcing the compulsory attendance law, known in the majority of States as the trushe or attendance officer.

## Colleges, Universities and Technological Schools, 1917-18

Of the 534 colleges, universities, and technological schools, zzz are public institutions and 443 are under private control or management. The public institutions enrolled sec, zez undergraduate and graduate students (6a, 16a mon and 44.esg women). The private achonic carolled 147.74 undergraduate and graduate attudents (60.45 men and 67.56 women). (If the 554 institutions 24 were for men, see for women and 330 were co-educational.

The total number of instructors in public and private universities, colleges, and technological achools was gions (ap,300 men and y,023 wennes). In genomic segmentary y seg students were envolved, in chemical equinocring 4,56, in often in contineuring 5,66, in technical engineering 5,66, in technical engineering 5,66, in technical engineering 5,66, and in mining engineering 2,56. The total number of baccalantuate degrees conferred in 2019-16 was stage (24,000 men and 2,550 women); altogether 3,400 grantuate degrees were conferred (2,300 men and 2,550 women). private universities, colleges, and technological

The number of volumes in the libraries of these institutions was a see see of II was estimated. institutions was spang, yet. It was estimated that the value of libraries, selentific apparatus, that the value of ilbraries, seigntine apparatus, machinery, and furniture was \$90,505,92; value of grounds, \$200,405,65; value of buildings, including domittories, \$200,405,95; and the value of dormitories, \$200,405,65; and the value of productive funds, \$200,405,85; buring the year the total benefactions received was Bao, 704,805.

## Normal Schools, 2917-18.

In 1917-18, 308 normal schools reported. These schools are chiefly concerned with the These schools are chieny concerned with the training of elementary teachers. Of this number, 17s are Ntate institutions; 34 city normal schools; as county normal schools; and 39 private normal schools. The total number of instructors in all these schools is 8,85s. Of this number, 4,949 are engaged in instructing pupils in normal courses. The total number of students enrolled is 138,274 (sr,867 men and 116,867 women). Of this total enrolment, 110,053 students are in normal training courses. The number of graduates from the normal training courses was a.z70 men and ss,33z women, making a total of 24.501. Practice or model schools are usually operated in connexion with these normal schools, or the public schools are used for this purpose. The total enrolment in these model schools was 83,60s. The total receipts for normal schools were \$25,728,203. The total number of volumes in the libraries was 2,272,627. The statistics show that the number of State normal schools has gradually increased, while the number of private normal schools has rapidly decreased. The city and county normal schools are new institutions. The total number of such schools throughout the United States is not represented in the report, insemuch as many of these schools have been organised very recently. The average cost per week per student in attendance for maintaining a State normal school is \$6 43 cents.

#### Summer Schools, 1918.

In 1918, 480 summer schools were maintained. Of this number 35 schools were conducted by colleges, universities, and normal schools. To universities and sop colleges are included in this total. The total number of instructors employed in these summer schools was re, 960 (7,470 men and 4,480 women). In addition to the instructors 1,760 lecturers were reported. The total number of students enrolled in these summer schools was 160,422 (23,445 men and 126,977 women). The average cost of conducting summer schools per student surolled in 1928 was

body. One; subget has no serolement of ever-6.000 students.

#### Profi cional Schools, 1917–18.

In 1917-18 the schools of theology smothel 9,394 students and reported 88 graduates; law schools enrolled 11,300 students and "reported 2,300 graduates; law schools of medicine enrolled 12,300 students and reported 2,400 graduates; schools of dentitery enrolled 2,314 students and reported 2,594 graduates; schools of pharmacy enrolled 4,633 students and reported 2,734 graduates; and schools of veterinary medicine graduates; and schools of veterinary medicine enrolled 2,250 students and reported 2,250 students and reported 2,250 students and reported 2,250 students and reported 2,250 students and reported 2,250 students and reported 2,250 students and reported 2,250 students and reported 2,250 students and reported 2,250 students and reported 2,250 students and reported 2,250 students and reported 2,250 students and reported 2,250 students and 2,250 students enrolled 1,250 students and reported 475 graduates.

## Nurse Training Schools, 1917-18.

The number of nurse training schools has increased very rapidly since 1893. At that time only 47 schools were in existence. In 1998 the number of such schools was 2,776. The number of pupils envoled in these schools in 1918 was or points enroted in these schools in 1932 was, \$5,351, and the number graduating \$3,752. These nurse training schools are of two types: x. Those schools which are more or less general in nature, or which are highly specialized, which treat physical rather than mental disorders. a. Schools in hospita's for incane patients. The general training schools number of schools connected with hospitals for the insane is 86. The figures relate only to hospitals which maintain nurse training departments. The capacity of the hospitals in which these schools are located is 303,103 beds, and the average fally number of patients is seg,899. In the general hospitals there are ordinarily from one to three patients to each nurse pupil in training. In the hospitals for the insane, the corresponding num-ber usually exceeds ten. The nurse training schools in general hospitals are usually small.

About half of them do not euroll more than twenty nurse pupils. Within the last seven years the age requirement for admission has been lowered about two years. In 1932 most schools required either a minimum of 20 or 25 years for admission. In 1932 a large majority of achools required a minimum of only 18 or 19 years. In general hospitals the greatest number of schools require ten hours of duty daily, 68s schools require the hours of duty daily, 68s schools having this requirement, 42s schools require nine hours of duty, and 23s schools eight hours of duty. In hospitals for the in-ane, the number of hours of duty required is insually ten or more. z8 schools require zs hours of duty, 8 require

18 schools require as hours of duty, 8 require 2, and 6 require 2, and 5 require 2.

The remuneration granted to pupils in general hospitals is usually less than two hundred dollars (\$200). In the first year 8, per cent of the schools pay under \$200, in the second year 85 per cent, of the schools pay under \$200, in the second year 85 per cent, of the course 34 per cent, pay under \$200. In schools in hospitals for the meaner the \$200. Sice. In schools in hospitals for the mashe the remuneration usually exceeds Sees. In the first year of the course, half the schools pay from \$3500 to \$4500; in the second year of the course, agper cent. of the schools pay from \$350 to \$4500, and 40 per cent. pay over \$400; in the third year of the course, over half the schools pay over \$400; in the third year of the course, over half the schools pay over \$400, and about 40 per cont. pay from \$200 to

Sees.

Almost so per cent. of all nume trisining schools:
In general hospitals offer a three-yeas course.

About so per cent. offer a two-yeas of tyre-fluidnum-half-year course. Within the less than years
gractically all nines training stateois have

lengthened their course to three years, and usually require attendance for a weeks during the year. In hespitals for the insane, about the year. In insepticis for the insame, about the per cent, of the schools ofter a three-peer course, and about 40 per cent, offer a two-year course, all about 40 per cent, offer a two-year course, about 50 per cent, require on year of high achool work for admission, 27 per cent, require two years of high achool work for admission, and 12 per cent, require a full high achool course, and 12 per cent, require only the completion of the elementary grades for admission within the past few years the tendence has Within the past few years the tendency has been to require either one or two years of high school work for admission. The statistics indicate a difficulty is securing nurse pupils within the last few years, on account of the lengthening of the course, and that it has been necessary to increase the remmeration, and to lower entrance

requirements.

In all sy universities and colleges offer nurse training courses. Rach of them offers the course to nurse pupils registered in a nurse training school of a hospital affiliated with the college or university. By this co-operation an excellent opportunity is afforded to the training school to ensure for their pupils a high type of instruction in technical and academic subjects.

#### Public High Schools, 1917-18.

In 1917 18, 13,931 public high schools re-orted. The total number of instructors in these secondary schools was \$4,822 (a8,782 men and \$6,042 women). The total number of and 55,042 women). The total number of secondary students enrolled in these schools was 1,718,619 (747,778 boys and 687,841 girls). The total number of coloured students included in the proceding figures is ar. 970 Altogether s,se6,ga3 students were enrolled in academic Altogethor conrses; a78,275 in commercial courses; 96,833, in technical or manual training courses; 26,675, in teacher training courses; 35,725, in agri-cultural courses; and zes,657, in home commits courses. In the first year of the course 656,933 students were enrolled, in the second year 44x,868, in the third year 300,208, and in the fourth year 330,260 students. Altogether s,ses schools reported military drill, in which a,mo schools reported mintary drift, in which see, 56,56 biys and a,mag girls were enrolled. The number of graduates reported was ana,357 (36,ms boys and a,37,46 girls). Of the 23,943 mintage girls. Of the 23,943 mintage girls.

accredited für admission to college. In these fully accredited high subsois there are 65,930 teachers and s.459,773 students (637,633 luys and 884,646 girls). There were 18,636 high schools that reported a four-year our-reulum. In these four-year high schools there are 95,633 teachers and 1.654,560 pupils our-view (724,656 luys and 339,386 girls). Altogether, 18,632 public high schools reported school libraries with an aggregate of 8,76.863 volumes.

These statistics on public high schools are in the section on State School Systems. By

was suc,pp. In species the number enrolled was spi.yes. The number of schools reporting in species r.ppl, and the number reporting in species as speciment. The total number of instructors In you was a page. The total number of instructors in these private high schools in seef was 14, as (g,411 nom and 8,768 women). In this group of exhools more than any other, there is a teadency for the schools to be either for boys or girls in the schools to be either for boys or girls. exclusively, rather than co-aducational. Of the a.ags schools reporting in ages, 390 were for boys only, 738 were for girls only, and ags were co-educational. The number of boys echools has not increased materially since spee, while the number of schools for girls has increased almost so per cent. There has been a decrease in the number of co-educational schools. Many of the schools for hoys as well as some of the co-educational schools offer military drill, Altogether, about one-fourth of the schools had military drill in ages, enrolling 3r.age students. Of this number a.629 were gitls. In age the number of boys taking this work was so, 304. Within the past two years the envoluent in military drill in these schools has been tripled. The number of coloured students enrolled in those schools in 1918 was e,zer. The total number of graduates from these institutions was s3.83s. The average size of the faculty was 6.9 per cent. The average number of students to a school was 72'z per cent. The average number of students to a teacher 11'3 Der cent.

The number of students enrolled in the first year of these private high schools was 36 6 per cent, of the total number; in the second year, ag' per cent; in the third year, 19's per cent.; and in the fourth year, 18's per cent.

Altegether, a,ore schools offered an academic course; Sys. commercial; sas, technical or manual training sas, teacher-training, sgs. agricultural, szs, home economics; and zzs, a trade training course.

580 of these private schools were non-sectarian, and z,478 were denominational (949 Roman Catholic).

Of the total number of students enrolled, 45's per cent. were boys and 54's per cent were girls.

The number of Negro girls enrolled in these schools was about twice as many as the number of Negro boys, there being 6,oax coloured girls, and 3,086 coloured boys.

## Private Commercial Schools, 1917-18.

In 1928 reports were received from See private commercial and business schools. These schools are of two types: first, those which are nonsectarian, and which are run on a commercial bests: second, those which are maintained by bests: second, those which are maintained by certain denominations and by Young Men's Christian Associations. The private nondenominational schools reporting number 180, the denominational and Young Men's Christian Association schools number rro. The total number of instructors in these Spo schools is in the section on State School Systems. By a number of instructors in these 250 schools is dedecting these figures from the totals given in that section the statistics of elementary schools may be secured.

Private Migh Schools and Assesses, 1917–18.

The number of graphs is private high schools in these schools in ranges. Altogether 251 schools expect missing students earlied in day schools report, missing students earlied in day content in the schools. In the course of the private high schools in the statistics of the private high schools in the second students are encoded in the second schools maintaining such a statistics to the introduction in the second schools in the

(wire), 4,pag; (wireless); 5,esb; mnountancy, 4,485; secretarial, 2,3,57; and in the subsummable between 2,9,56. Two hundred and forty-eight schools have an enrolment less than not any mobools have an enrolment between 200 and 200. Our-half of the commercial schools enrol about 15 per cent. of the students.

The average number of students per instructor varies considerably in the different schools. The largest group of schools have from 16 to 25

studente per instructor.

The average length of the daily session likewise varies considerably in the different schools. Three hundred and fifty-five schools are in session a hours per day; as a schools are in session focurs per day.

The usual tuition fee per month in the day

Sue to Sig for any course. The tuition fee for the night course per month is generally \$5 or \$6. The usual tuition fee charged for the entire commercial or hookkeeping course, or for the entire stenographic course, varies from \$60 to
\$50. The time usually required to complete the
course is six months. The tuition fee for the combined commercial and stenographic courses usually varies from \$50 to \$140. The tuition fee usually charged for a course in telegraphy (wire) is \$60 to \$80.

The majority of these private commercial schools teach only one system of shorthand, 547 schools falling in this class. Two hundred and two schools teach two systems of shorthand. Forty-eight of the 76 schools having an en-rolment of 500 students or more teach the Gregg system of shorthand. Forty of these schools teach some Pitmanic system Altogether system of shorthand, and 44 per cent. offer some

Pitmanic system.

Industrial Schools for Delinquents, 2017-18. In 1918, 135 industrial schools for delinements eported to the Bureau of Education. Most of these schools are State institutions. Eleven are supported by countles and five by cities, while two are supported jointly by a city and a county. Thirty-one of them are private institutions. In these reformatory institutions 2,237 trans. In tress retornatory instructions 1,137 teachers are employed (653 women and 48s men). In addition to the teachers 3,585 assistants caring for inmates are employed.

carng for inmates are employed.

In these schools 62,76s immates were enrolled during the year (49,65s boys and 14, ros girls). In so far as reported, there were 51,765 white-children and 8,47s coloured children. Seventy-nine schools have an enrolment less than 30s:

the other schools vary in size from 300 to a 300.
The valuation of property per child in average attendance in industrial schools for delingrents in the United States is St.645. This varies from Sags in the State having the lowest average, to Sags in the State having the lowest average, to valuation of property. The amount spent snamally in the United States for keeping an instate in one of these institutions is \$40 for curiout expensel; shed \$30 for permanent im-provements. is in the State having the highest per capita ation of property. The amount spent

cols dur the Bank: 1927-16.

n ing-ne reports were 'selfived from uga dell'ste the deut. Of this quinker, so acheole Batte institutions, so acheole are maintained from to the city public union-uptum; and thiods are miller jetvale thussed. The total

number of testractors in the three types of schole is after (z.ex women and gis men testhers). The total number of pupils enrolled is z.g.g. This total includes zz.gré pupils enrolled in State institutions, a.g.s. pupils in city day school classes, and 644 pupils in private schools. The number of graduates from secondary schools in State institutions is a from secondary schools of city day school class for the deaf, g; from private institutions, g. The average expenditure per pupil for current expenses in State institutions is \$338 and in private institutions Sask.

#### Schools for the Blind, 1917-18.

In 1928, 62 schools for the hind reported a total encolment of 5.386 pupile (2.86) boys and 2.529 girls). The number of instructors in these schools is 728 (227 women and sor men). Four-teen States provide for the education of their deaf and blind in dual institutions, that is, both deaf and blind pupils are educated in the same schools. Altogether there are us such dual schools in the United States. Ten of the schools for the blind included above are operated as a part of the city public school system. Four schools are under private control. The others are State schools or serve as State justitutions. The average annual cost per student in schools for the blind is \$4s8.

#### Schools for Feeble-minded and Sub-Mormal Children, 1917-18.

Nearly all States provide schools for feeblemuded children : 43 schools of this type reported in 1918; 3s private schools also submitted a report. Altogether 13r cities have organised classes for the teaching of sub-normal and back-ward children. The children in these schools are not usually feeble-minded, but are retarded in their school work. The number of instructors in State institutions was 423, in private institu-tions 122, and in public day school classes of city schools 1,134. The total number of inniates in State institutions was 35.966 (18.363 boys and 27.655 girls); in private institutions, 982 (467 boys and 516 girls); in public day school classes of city schools, 18,233 (11,937 boys and 5,196 girlsk

In State institutions ar per cent. of the pupils take music, 26 per cent. home economics, 29 per . cent. manual training, 11 per cent. agriculture, and 13 per cent. tade training courses. In oity day school classes, so per cent. of the pupils take music, sy per cent. home economics, 86 per cent. manual training, so per cent. agriculture, and za per cent. trade training courses. In private actionis 43 per cent. take music, s4 per cent. home conomics, 34 per cent. manual training, 14 per cent agricultural courses, and 4 per cent. trade training ounrace.

## Dependencies of the M.S.A.

THE PHILIPPINE ISLANDS are attuated between 4" 40' as" no' N lat. and

236" 40' 136" 34' E. long, and are distant about 900 miles from the south-east coast of the contiment of Asia. Their total land area in 224,400 aquare miles, of which total 94,946 square miles are contained in the eight largest islands, the Liment of Asia. 3,230 other islands having a combined area of

gage square nites.

Topolation.—At the Counts of soon the oppolation was assortained to be 7,635,486, almost all of Malayan stock, of whom meanly 7,000,000 were ('hristiaus (Roman ('atholics), about 275,000 were Muliammadans; about 725,000 are painting Of the foreign born residents about threequarters are Chinese, and of the white population over one-half are from the U.S.A. (8,000 in pog). The population (Dec 32, 1928) was 1,320,640, of whom 9,492,592 were Christians. (Journment.—The islands were discovered in 1903).

(Roserment, —The istance were discovered in gas by the Portuguese mavigator Ragellan, who was sixth by the natives of Maotan. In 1846, which were named "Filipinas," after the sun of the King of Spain, and in 1874 the city of Manila, was founded by the commission Legans, who exhibited the inhabitance of almost all the islands, subdued the inhabitante of almost all the falands, their conversion from basharism and pagazism; Torons,—Capital, Manila, in the isla-being undertaken by the Augustianan friance in Laguagi's train. In syda the capital of the spanish next languar towns are Cold-dygas), of

colony was occupied by a British force, but in 1764 the newly-acquired territory was restored to Spain. In the nineteenth century there were frequent disturbances in the islands, and at the outbreak of the Spanish-American War of regs a rebellion was at its height under Aguinaldo, a native leader, whose assistance was secured by Admiral Dewey, the commander of the American Pacific fleet, after the aunihilation of the Spanish vessels in Manila Bay on May z, z898. Vanila was captured by the American troops under General Wesley Morritt on Aug. 23, 2508, and the Islands were ceded to the United States by the Treaty of Paris of Dec, so, see

lu soso the Philippine Scouts consisted of and officers and 8, 250 enlisted men; there were also in the Islands on April 2, 2900, 538 officers and 13,233 collects of the U.S. The Philippine constability consists of 374 officers and 6,322 All the enlisted men in the oulisted men. socute and constabulary (and almost all the officers) are natives of the Islands.

Trade.—The principal exports are homp, coco-nut oil, sugar, and tobaseo; the imports being outdon manufactures, and iron and steel manu-factures. The total trade in age; was valued at

Manila, in the island of

#### GUAM.

Guam, the largest of the Ladrone or Marianne Islands in the North Pacific Ocean, lies in 12° a6 R. lat. and 144° 25' E. long., at a distance of about 1,305 miles east of Manila, the capital of the Philippine Islands, and forms a naval station between that dependency and the livited States. The area of the island is estimated at ms square miles, with a popuestimated at agg square mines, with a population on July z, 1929, of 24,635, of whom 23,633 are classed as native, 470 of the naval station, and 542 other than native. The natives are of Chamorro stock, mingled with Filipino and Spanish blood. The language is a Malay dislect containing many Spanish words, but English is fast becoming the language of the island.

CAPITAL, Agaña Port of entry, Apra. Governor, Capt. I. C. Wettengel, U.S.N.

#### PUERTO RICO.

Puerto Rico (Rich Harhour) is an island of the Greater Autilles group in the West Indies, and lies between 17 20-28 30 N. lat. and 62 30-67 12 W. long., with a total area of 3.505 square miles and a population of 1,297,772 at the commo of 290. Almost all the inhabitants are Roman Catholics. The island is about 100 are Roman Catholics. The island is about recomiles from west to east, and 40 miles from north to south at the western end, narrowing towards the eastern extremity. The capital is z,see miles distant from New York, and observing districts, and tobacco and coffee on the alopes of the hills; fruits, cotton, maize, sweet potatoes, rice, and yams are also grown. The trade is principally with the U.S. About 340 miles of railroad were in constation is zero, and there of railroad were in operation in 1919, and there are good harbours at San Juan and Ponce. The are good narrours at san Juan and Poince. The capital,San Juan, had po,per inhabitants in 1980, other towns being Pouce (41,561), Mayaguer (19,669), Arcelbo (20,029), Bayamou (10,412), and Caguas (24,154). The legislative functions are vested in a legislature which consists of a elective houses; the Senate, composed of so members (a from each of the y senatorial districts and s From each of the y solutions unstable sime 3 senators at large), and the House of Representatives, composed of 30 members (a from each of the 35 representative districts and 4 elected at large). The term of the Legislature is 4 years.

Governor, Arthur Yager ......\$ze,eee

## TUTUILA.

Under an agreement between Great Britain, Germany, and the U.S., of Nov. 14, 1899 the first-named Power abandoned all claims to the slands of the Samoan Archipelago, which were divided by the remaining parties to the agree-ment, the islands east of 171° W. long, being reserved to the U.S. The territory thus acquired consists of the inland of Tutulia and Annua, fru, consists of the inland of Tutulia and Annua, fru, Olosenga, Tan, and Rose Islands, with a total area of about gi square unless and a population estimated at pape in uses.

The totals, the largest of the U.S. group, has an area of about, so equare unless and a population

area of about so square miles and of 5,age, and contains a magnifi

do the fronty of Pirecilla, was the

(g. reg), and Rollo (co. Roll); there are several others with populations fruin at east of government. The remaining Risadi have an area of government (Routes). Francis Burton about is square miles and a population of about is square miles and a population of about is square miles and a population of about is square miles and a population of about is square miles and about is square miles and about is square miles and about is square miles and about some several population of about areas of course of the miles and some square miles and some square miles and some square miles and several miles and se

## WAKE AND JOHNSTON ISLANDS.

The flag of the U.S. was hoisted on Wake Island in 1899, and three other islands in the Pacific have been annexed (Johnston, Palmyra, and Medway).

## ALEUTIAN ISLANDS.

The Acution Islands, or Catherine Archi polago (also known as the Santa Barbara group), lie westward of the district of Alaska, and consist of four groups of islands (Fox, Andreanof, Rat, and Near Islands) between gao-gg N. lat. Rat, and Near Islands) between  $g_0^{**}=g_2^{**}N$ . lat. and  $g_2^{**}E_s=g_2^{**}W$ . long. They have a population estimated at  $s_i\infty o$ . The principal settlement is at likelike, on Unalaska Island. The group forms a part of the district of Alaska, and was transferred to the U.S. by Russia in 1867.

## VIRGIN ISLANDS.

The three islands, St. Thomas, St. John, and St. Croix, in the Virgin Island group, West Indies, formerly the possessions of Denmark, were purchased by the United States from Denmark for the sum of \$85,000,000, and pruclaimed, January ag, 1927. The total area of the islands is 132 27 84 miles, with a population in 1922 of \$7,055. St. Thomas (18,000 acros) has a population of 10,1921, mostly negroes; St. Cross, or Santa Cruz (1922 acros) has a population of 10,1921, mostly negroes; St. Cross, or Santa Cruz (53,923 acres), has a population of z4,90z, the capital being Christianstiid (or Haasin); St. John (egg acres) has a population of ets, the capital being Craxbay. Bt. Croix exports sugar, rum, and cotton. In St. Thomas there are \$ public and to percental schools, 1,705 pupils and 57 teachers; in St. Croix, 7 public and 27 teachers; in St. John, 5 public schools, 1,206 pupils and 72 teachers; in St. John, 5 public schools, 182 pupils and 9 teachers.

The revenue is derived from customs, income tax, ground and building tax, trade tax, &c. The estimated revenue for year ending June 30, 1900. Francs Sp.,005. The administration is under the Navy Department. There is a regular fortnightly service from New York to St. Thomas, which possesses a powerful wireless installation.
('APITAL, Charlotte Amalie (St. Thomas) con-

tains one of the finest harbours in the West Indies, accommodating vessels of large draught, and has a large coaling and oil refueling station. Governor, Rear-Adm. Joseph W. Oman, U.S.N.

Secretary, Lieut. C. C. Timmons, U.S N.

#### THE PANAMA CANAL

The first suggestion for a canal across the Isthmus of Pansma was made by a Spanish iscamus or ransma was made by a spatisan engineer in 1339, and surveys were actively engaged upon by various private companies between the years rateg and rage. In 1876 a concession for the construction of a canal was granted to a French promotion corporation, which conducted surveys during a period of two which conducted surveys during a period of two years, and reported to an international congusts hold at Paris in May, sby, overwhich localizated de Lessops presided. This congress advised the construction of a const at sec-level, and its site the work was undertaken by-the Universal lateroceanic Penassa Canal Company, of which de Lessops was neutral head. "After two years of perpanetory work, the first ensavation was made on January so, see. The amount of work to be accomplished proved to be greater than was estimated, and the condition under which it was carried on more embarrassing. Sickness, intererence of local officials, and mismanage-ment by the administration in Paris, resulted in the failure of the company, and a receiver was appointed in 189. Under direction of the French courts a new company was formed to carry on the work, and, after a nearing of surveys carry on the work, and, after a period of surveys, excavation was remmed in 1894. This was continued until May 4, 1994, when the United States Government took possession of the effects of the French company in Panama.

The interest of the United States in a canal

across the Isthmus dates from seas, and surveys under the suspices of that Government, or of companies organised in the United States, have been made at every available point between the Isthmus of Tehuantepec and the Atrato River. Actual cometruction, by an American company, of a causi across Nicaragua was begun in sage, and shandoned in 1822, when the company failed for lack of funds. The failure of this company influenced the United States Government to take an active interest, and a commission was an arrive an arrive appointed in zegs to make further studies and investigations. As a result of these investigations, the Congress of the United States authorised the President in ages to purchase the effects of the French company in Panama for serects of the French company in ranning states as \$40,000.000. Veanwhile, a treaty was negotiated with the Government of Colombia for the cession, upon payment of \$70,000,000.000, of the constructed. The failure of the Colombian dovernment to ratify this treaty led to the second of Panama on November 3, 1903. The new Government was immediately recognised by the United States, and a treaty was signed on February 46, 2904, in which rights of sovereignty over a strip of land ten miles in width, extending across the Isthmus, were coded to the United States. The canal is built through the centre of this territory.

Two years were spent by the United States Government in sanitation, the assembling of plant, and organisation and housing of a labour force; after which operations on a large scale

were begun on all parts of the canal.

Including the purchase of rights, payments to Panama, and construction and operation of the canal and its adjuncts, the total appropriations by Congress to June 30, 2980, were \$438,600.856.60 Tolls and other revenues, from its opening until July 36, rese, amounted to \$34,486,575 85.
Ituring the past two years they have averaged approximately \$7,650,000 a year, or about

Spy, gas a month.

The canal is fifty statute miles long (47% and the channel is from gas to 2,000 feet wide at bottom. The least width is in Culebra Cut, and the greatest in Gatum Lake, where the channel can be made transport that the continue can be made of trees and a small amount of dredging. The water depth when this surface is at 8g feet above sus-level varies from 8g feet in some parts of Gatum Lake to 4s feet in the Atlantic entrance. The depth through Culebra Cut is

ag feet.

There are three essential parts: a lake formed by demming the Chapter River, and two channels leading from the Atlantic and Pacific Cotans to the lake it necessally.

at 2g feet above sea-level, and the channels connecting it with the sea are at efficient. Ships are littled from the sea-level channels to the lake, or lowered from the lake to sea-level in locks. These locks have a "saable length" or roes feet, width of rae feet; lesst depth of water over the silks when lake is at normal level, at 15 feet. These dimensions, limit the size of ships using the canal. The dam which forms the late is situated at Gentra above. the lake is situated at Gatun, about seven miles inland from the Atlantic. It is built of earth, with an impermeable core of fine sand and clay, and is 1½ miles long, half a mile wide at bottom, and no feet at the top, which is no feet above sea level. The lake is known as Gatun Lake, and is sig square miles in area. At its southern end is Culebra Cut, the channel through the continental divide. This is the most extensive excavation ever made. The French canal builders dug about 12,000,000 cubic yards out of this section of the canal, and the Americans have completed an excavation that amounts to over 100,000,000 yards. The total excavation for the whole canal is about \$62,000,000 cubic yards, about 130,000,000 yards of which have been excavated in the dry and the balance by dredges The amount of concrete used in the locks is

4,500,000 cubic yards.
The administrative organisation for the canal is known as "The Panama Canal," with the Governor of the Panama Canal (Big Gen. Chester Harding, U.S.A., retired) at its head. The Governor reports to the President, who has delegated the Secretary of War to have super-vision over the canal for him. The Governor of the Panama Canal is President of the Panama

In connexion with the construction and operation of the canal, extensive terminal and supply facilities have been constructed at both the Atlantic and Pacific entrances. These include marine and general repair shops, foundries, dry docks, five 1,000 foot steel and concrete plers, and a number of wharres, slaughter-houses, and cold storage plants, ice plants, loundries, hospitals, coaling plants, fuel oil tanks and delivery plants waterworks, commissary stores, storehouses of spare materials and ships chandlery stores, and other accessories of great modern ports. An extensive transfer of cargo goes on at the Atlantic terminus of the canal, between ships plying the Atlantic and the Caribbean and ships which pass through the canal to or from Pacific ports. The 1,000-foot dry dock, with adjacent repair shops, at Balhoa is an important assistance to shipping throughout the American tropics as well as a base for repairs for vessels of the Navy

Health conditions and excellent, while the scenery is varied and attractive, with ruins of old Spanish towns and fortifications. Gatan Lake is studded with islands and surrounded by mountains. Shoeting and tarpon fishing are ex-cellent. The U.S. Government operates hotels

at Colon and Aucon.

The number of commercial vessels passing through the canal in both directions in the through the canal in both directions in the final year conding Fine pa, spec, was a pid, with a carrie tennage of a pa, spe tens, of a a possed, a The total of channercial dilips passing through the canal in the first six years of its operation, from August 15, 1944, to August 25, apes, was 25,250 ff 25,25,250 but tons, Pantines Canal measurement, carrying as 373, she tons of carrie.

THE following Articles have been revised under the direction of the fillions Governments or of the British Representatives at Foreign Courts, to whom the Editor desires to express his warmest thanks. The Editor is also greatly indebted to the Embassies and Legations. m London for various corrections and additions.

#### ARYSSINIA - RTHIOPIA.

press, Waizern Zauditu (daughter of late Emperor Menelek), born 1876; elected Sept. syth, 1916. Heir. Ras Tuffari Makonnen.

The area of Abvasinia and its dependencies is estimated at 250,000 square miles, with a total population of 7,000,000, of whom about one-half are Abysenians and the remainder Gallas, negro tribes on the west and south frontiers. and Danakils and Somalis on the east. The political neighbours are the Sudan, the Italian colony of Massowah (Britrea), the French colony of Dibuti, and the British Somaliland, Kenya Colony and the Uganda Protectorate. Abyssinia is volcanic and mountainous. It

contains some mineral wealth; iron and coal are not uncommon, and gold is washed in various streams, while salt, saltpetre, and sul-phur are also procurable. The lower country and deep valley gorges are very hot; the higher plateaus are well watered, with a genial climate. In the hotter regions, sugar-cane, cotton, coffee, rubber, &c., flourish; in the middle zone maize, wheat, barley, wild oranges and other fruit trees, tobacco, potatoes, &c., are cultivated; and above 6,000 feet are excellent pastures with some cofn cultivation. There are two seasons in the year, a dry winter and a rainy summer from June to September. The chief river is the Blue Nile, issuing from the Tsana lake, the Athara and many other tributaries of the Nile also have their rise in the Abyssinian highlands. Horses, mules, donkeys, oxen, goats, and sheep, and camels in the lowlands, form a large portion of the wealth of the people.

the wealth of the people.

The Abyssinians are Christian (a branch of the Coptic Church), and their kings claim descent from Menelek, the son of Solomon by the Queen of Sheba. There is no popular literature, and little education. The potential arm) numbers at least 200,000, armed with rifles. The principal pursuits are agriculture, cattle breeding and hunting. The chief exports are coffee, civet, war, hides, rubber, ivory, and gold. The total trade is valued at about An economic for imports and exports, and is facesaing. The import duty on all goods at Gambels is so per cent. ad sulorem, and at Diro-Dawa and Harrar 8 per cent. ad culorem, in the interior the duty is variable, and 3 per cent. addition is imposed on goods brought to the capital. A railway (157 miles) has been built under French auspices from Jibuti to the capital, rid Dire Dawa. The posts and telegraphs are under French management. The principal towns under French management. The principal towns besides Adis Abaha, are Adwa, the capital of Tigré, Gondar, Debra-Markos, Saiyu, Atsum, Antalo, Ankober, Gond, Demboeha, Ijinte, Jimma, and Hanrar, There are ancient architectural remains at Absum, Gondar, and Ankober; modern architecture is very poor, CAPERAL, Adis Ababa (population fluctuates, but in ordinarily about passes). Harrar, in Bastern Abyminia, has a population of about 48,000.

FLAG: Green, yellow, red.

\*AMBORRA.

A similature Republic in the Eyrendes, with an area of 179 sq. unites, and a population of 3,500; it is mader the joint susmainty of France and Spain. There is a Council of Twenty-four, elected by sertain of the inhabitants, a judge, and two lay vinary appointed by France and the Spanish Bishop of Urgel.

#### ARARIA.

Arabia is a peninsula in the south-west of the between Asia and Africa, and lies between 30° 30′ -60° E. long, and 22° 42° -24° 90′ N. lat. The morth-westen limit is generally taken from Akaha, at the head of the Guif of Akaba, to a point in the Syrian Desert about 250 miles north-west, and thence northwards to a point shout 30 miles of Damascus. The remaining land boundaries are in the form of a horse-shoe, encompassing the Syrian Desert, and descending in a south-easterly direction to the head of the Persian Guif, and thus excluding the whole of Mesopotania and the Euphrates Valley. The other boundaries of Arabia are the Red Sea and Guif of Adeu, the Arabian Sea, and the Persian Guif and Guif of Oman. Generally speaking, the peninsula consists and the broad south-eastern promontory, which encloses the Persian Guif, contains a coastal range with Jeid Akhdar, 10,000 feet above the level of the sea, in the Sultanate of Oman.

The total area is estimated at 1,000,000 sq. miles (of which nearly one-half is occupied by the Syrian, Natud, and Dahna deserbe), and the total population is believed to be about 5,000 coo.

#### THE KINGDOM OF HEJAZ.

King of the Hejaz, El Hussein ibn Ali.

On June 5, 1925, the Grand Sherif of Mecca (hereditary Keeper of the Holy Places) three of the Turkish allegiance and declared the independence of the former vilayet of Heiaz. In concert with the British Imperial forces under General Allenity, the armies of the King of the Heiaz (under the leadership of the Emir Feisal) penetrated northward, through the districts E. of the Jordan, to Damascus, and the territories of the new kingdom extend from Asir (see below) in S. to Palestine and Syria in N. and from the Red Sea, the Gulf of Akaha, and Palestine in the W. to the ill-defined boundaries of Central Arabia.

Parallel with the Red Rea coast runs the Tehama range (Jobol Shar, or Mount Ref., 2000 feet, and Johel Radhwa, 6,000 feet). On the coast are the small ports of Muwela Danagha el With, Yambu (the chief port). Babigu and Jidda (the pitgrims' port), which contains the reputed "tomb of Eve," the mother of mankind; and inland are many settlements through which runs the Hejaz Railway. The Onste of Kariber, east of the railway, contains a considerable population, descendants of former segre slaves, with a Jowish coatre at Kasr of Yahudi. The importance of Hejaz depends upon the pitgrimages to the holy cities of Hedina and Moose. Brefine (At Fedina, "The City"), has sailed by ruli from Banascou, and the presents topulation of latent espees, and its velocitated or the burial

please of Mahomet, who died in the city-in Jime'y, whe I've Rabin, A.R. rif. The Moray of the Prophet (see feet in length and over his is breadth) contains the secred form of Mahomet. Mecos, the birthplease of the Revopte, the gratics cant of the scaport of Jiddajand about see miles cant of Medina, and has a fixed population estimated at 60,000. The city contains 'the great measure surrounding the Keebs, or sacreshrine of the Muhammadan religion, in which is the black stone "given by Usbriel to Abraham," placed in the south-sast wall of the Kasha at such a height that it may be kissed by the devout ultrim.

devout pligrim.

The Hoisz Radiesry runs from Medina in S. through the Syrian Desert to Damascus and Belrut, and is connected with the projected Radiway at Aleppo. The total area under the rule of the King of the Hejar is about rus, 500 sig miles, with a population of from 350,800 to 400,800, including many nomad tribes. The capital of Hejar is Mecca, which is connected with the seaport of Jidda by 60 miles of rallway; population about 66,000 Pligrims from the west disembark at Jidda, how which hiddes, mother-of-pearl, coffee, and carpets are exported.

## THE EMIRATE OF NEJD AND HASA.

Kmir, Abd-cl-Aziz es Saud, K C.I E.

This former vilayet was in the 18th century an independent Empire of the Wahabites, and has reasserted its autonomy under a representative of the former dynasty. It is known as "the true home of the Arak," and extends across the cases of Central Arabia, from the eastern boundary of Hejax to the Persian Gulf. During military operations in 1913, the Emir of Nejd captured Hufuf (the capital of El Hass), and extended his rule over the former Turkish province of El Hass. The capital, Riyadh, is a station on the Pitgrims' trans-Arabian caravan route from El Hass to Mecca, and contains a large mosque, the "Westminster Abbey" of the Wahabi Moslems. The principal trading centre is Ansiza in the central province of Qasim (Nedj). The principal port on the Persian Gulf is El Katif, on Bahrein Bay (El Hasa).

#### THE PRINCIPALITY OF KOWEIT

Ruler, Sheikh Salim ibn Mubarak, C.S.I.

Koweit has been semi-independent for many years, and is in treaty relation with British India. It extends along the shore of the Pervian (init from Mesopotamia to Nejd (El Hasm). The important barbour and gulf port of Koweit, the capital (pop. ag.ess), is an entrepot for goods for the interior, and for the export of horses, pearls, dates, wold, she it was designated as the terminum of the Berlin-Constantinople-Bachdat radiums as originally projected in 1982. Pointest alignest; Major J. C. More, p.8.0.

#### THE BULTANATE OF OMAN

Sultan, Seyyid Tuimur bin Faisal, born 4886,

Oman (area Be,eso eq. miles, estimated popga,eso) is a Muhammadan State in S.E. Arabia with a const-line of about 2, see miles along the Persian Smil, the Sulf of Omain, and the Arabian fee from H. Enterto Eastelv. The orientry, much of which is sett and desert, estimate in John Atheliar an elevation of sales fort. The poplation-is chiefly Arab, but hadedn also a conciderable foreign alessent-Hiddana, Pensian, Balushis and Swahiji negues. The Sultan is in trenty relations with, and subsidized by, the Government of India, who have a political agent at his capital. In agap, at the end of the reign of the last Sultan, the tribes of the Interior rose in reballion, and, having elected their own Inan or Spiritual Euler, have since administered the whole of Omain proper, the afforts of the Sultan to establish his control having been, up to date, unsuccessful. This reballion has, with the war, interfered with the prospective of the country. The Sultan is pledged not to code territory to any Power but the British Government. Mucathas Power but the British Government. Muscat has a considerable trade, amounting in 1916-17 to £465,466, and in re17-18 to £383,015, a decrease owing to interior disturbances due to the war. Dates are the chief export, and rice, wheat, cuffee, cutton and silk goods the chief imports. The capital, Muscat, has an estimated population of 24,000 British Consul and Political Agent, R. E. L. Wingate ..... per mensem Rs. 2,250

## THE EMIRATE OF JEBEL SHAMMAR.

Emir, Abdullah ibn Mitab er Rashid.

Jebel Shammar is a Bedouin community of Central Arabia, extending across the cases from Hejaz on the west to Koweit on the east, with Neid as a southern neighbour. Its boundaries are indeterminate, and the total population in allegiance to the Emir is believed to be about soc, oo The capital is Hall, between the two Shammar ranges (Jebel Aja and Jebel Salma) with a population of about 12,000.

#### THE EMIRATE OF ASIR

Bmir, Muhammad Hamid ed-Din.

The Emirate of Asir includes the Red Sca littoral between Hejaz and Yemen, and extends inland to the Dahna Desert. The maritime lowland is a fertile district of wadis, and contains large grain and pastoral areas. The capital is large grain and pastoral areas. Ebuah, a small inland town.

#### THE IMAMATE OF YEMEN

Imam, Yahya Muhammad Hamid ed-Din.

The Imamate of Yemen occupies the S W. corner of the Arabian peninsula, between the Emirate of Asir and the British dependency of Aden, with an estimated area of 74,000 sq miles and a normation of 600,000 to 700,000. It was and a population of 600,000 to 700,000. It was formerly divided into the vilayets of Sama's Tais, Asir and Hodelda, and it extends inland to the Dahna Desert and to the tribal territories of Hadramut. On the plateau between the coast of Harramit. Where present destrict known as and the Dahna Desert (a district known as RI Jebs!) are the most fertile parts of Arabia, where wheat, barley, millet and coffee are extensively grown. The sea port of Moche has become associated with the coffee export trade, but in this trade (and in all others) it is of

extensive plateau inhabited by the Hadarim, an ancient people of Arabian stock (Hadaram was the son of Johtan, Genesic x., sy). There are many settlements on the coast and in the interior, but the latter are being steedily enveloped by the sand of the northern desert. There are so, so, red shrines near Kasun (Kahr Hud) and Shibhin (Kabr Sāilh). The casters districts, known as Mahra and Jian and Shibhin (Kabr Sāilh). and Shidam (Albr Naim). The eastern districts, known as Mahra and Gara, are very sparsely populated. The estimated area of Hadramut is 8a,coo sq miles, and its Minhammadan population, of independent Arab tribes, is estimated at 190,coo. Agriculture and cattle raising are the principal industries, together with the cultivation of dates, indigo and tobacco. The capital is Shibām, in a broad valley parallel with the coast. The chief port is Mokalla.

#### ARGENTINE REPUBLIC.

Minister of the Interior, Dr. Ramon Gomez Foreign Afairs, Dr. H. Pueyrredon, Fruance, Domingo Salaberry. Justice and Public Instruc., Jose Salinas. Agriculture, Alfredo Demarchi. War and Marine, Dr. Julio Moreno. Public Works, P. Torello.

and Secretary, Don Eduardo Racedo. Military Attacké, Lt.-Col. Don Inis J. Garcia. Attacké, Don Carlos Dominguez.

*Naral Attacht*, Capt. Don Enrique Moreno. Consul-Gen., Dr. Sergio Garcia Uriburu, 222 Oxford Street, W. z.

Asst. Cousul, Don Arturo Parker.

There are also Consulates at Liverpool, South-ampton, Cardif, Manchester, Newcastle-on-Tyne, Newport, and Glasgow.

Argentina is a wedge-shaped country, occupy-ing the greater portion of the southern part of the South American Continent, and extending from Holivia to Cape Horn, a total distance of nearly 2,300 miles; its greatest breadth is about 230 miles. It is bounded on the north by Bolivia, on the north-east by Paraguay, Brazil, and Uruguay, on the south-east and south by the Atlantic, and on the west by Chile, from which Republic it is apparated by the Cordillera de los Andes. On the west the mountainous formally a south the south and the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the south the so Cordilleras, with their plateaus, extend from the northern to the southern boundaries; on but in this trade (and in all others) it is of secondary importance to Hoderida. The trade of Yemen probably exceeds that of the remainder of Arabia. The capital is the walled city of Sana's (pop. se,ees), and about 70 miles to the Sana's (pop. se,ees), and about 70 miles to the Sana's (pop. se,ees), and shout 70 miles to the Sana's (pop. se,ees), and shout 70 miles to the Sana's (pop. se,ees), and shout 70 miles to the Sana's (pop. se,ees), and shout 70 miles to the Sana's (pop. se,ees), and shout 70 miles to the Sana's (pop. se,ees), and shout 70 miles to the Sana's (pop. se,ees), and shout 71 miles of the Capital is Dhamar, an ancient seat of icarning, and the headquarters of the Zaidi sect of the Milesammadans.

THE HADRAMUT TRIBES.

The constal region of Southern Arabia, between Yamen and Aden on the west and Oman on the cast, and extending inland (northwards) to the Dahna Decest, contains a constal strip of some pan miles. Principles with the rocast (st. a diptance of go miles from the Arabias See). In an including the Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana's Sana its course; the Pitermann Berussio, and fished del Berte no also navigities for some distance from their confusees with the Parani. In the Prevince of Buence Aires the fished del Sud form continent for some see miles into Semhusembon Bay (Atlantic). In the south the Colorado and Rie Hegro rise in the extreme west and flow across the pampas into the Atlantic, many similar streams in Patagonia (notably the Chabut and Santa ("uz) travering the country from the Andes to the Atlantic.

The Republic is composed of 24 provinces and 25 territories, comprising in all about 2,325,000 square miles, wild a population of 8,46,250 in 252. Immigration is encouraged, and comes principally from Spain and Italy, but legislation, introduced is 252, requires intending immigrants to produce certificates of good character and ability to work. The climate is mouerate and healthy. Spanish is the language of the country.

Government The estuary of La Plata was discovered in 1818 by Juan Diaz de Rolis, but it was not until 1824 that Pedro de Mendoza founded Buenos Aires. In 1882 Spanish rule was overthrown, and in 2828 the independence of Argentina was complete, atthough not acknowledged by Spain until 1822. In 1852, after more than thirty years of disturbances and civil wars, the country settled down, and is now a well-governed and progressive Republic. The constitution dates from 1823 (revised 1289) and is modelled on that of the U.S of America, but each province enjoys practically complete autonomy. The executive is in the hands of the President, who selects his Cabinet. The National Congress consists of a Science of Space per annum.

Production—Of the total area about one-third

Production—It the total area about one-third is suitable for agriculture and cattle raising, and vast tracts are held by the Federal Government for sale or lease to colonists. The principal productions are wheat, maize, oats, linesed, augar, wine, wool, hides, cattle, sheep, and horses. There were in space as [856,95] cattle, sheep 43,285,865, horses 8,283,885, 355,659 mules, 4,383,880 goats and 4,960,355 pigs, the total value heling placed at £73,880,880. The export of frozen heef and multon is an important industry. The exports are made up entirely of pastoral and agricultural products, with the exception of quebracho, copper, manganese, and wolfram. In 1880, there were 4,380 registered wine presses, handling about 686,880 tons of grapes, the output in 1891 being over 4,080,080 hectolitres (25,880,880 gallons). The export of wine to neighbouring fouth American States is increasing annually, and the importation of wine has almost cased.

A total of shoot Concessors British capital in

Defence.—The Stery consists of a superpressional buttlessips, a river mounton, a armoured cruisers, a cruisers (old), 4 torpedo guaboats, y destroyers, and a first class and a second class torpedo boats, efficiently thout gase men. There is a naval post at Bahia Blanca. The National Militia has a peace footing of about 30,000, with reserves of 30,000; on a war footing the Army would comprise g divisions of a0,000 exit.

Education.—Primary Education is secular, fee and nominally compulsory from the ages of 6 to 14, but only some 45 per cent of attendances are secured. Secondary Education is controlled by the Federal Government in lyceums and normal schools, with an average attendance of 6,000. There are also Special Government Schools — x naval, x military, x mining, and x agricultural. There are National Universities at Cerdoba and Bueno Aires, and Previncial Universities at La Plata, Santa Fé, and Paraná.

#### ARMENIA.

Armenia occupies the uplands between the Iranian plateau and Asia Minor, and is bounded kranian plateau and Asia Minor, and is bounded by the Black Sea and the Republic of Georgia on the N., by Kurdistan on the S., by the Republic of Azerhaljan on the E., and by Turkish Asia Minor on the W., and until the outbreak of the War of agag-zē it was shared between Turkey (3,560 kg. infles), Russia (6,535 ag. uniles), and Persia (6,535 ag. miles). The country possesses great historical interest at the reputed seat of the oldest civilized people in the world. The inhabitanta have always nossessed definite racial obstracteristics, but in the world. The intantiants have always possessed definite racial obstracteristics, but have seldom been politically independent, the country having been held successively by the Modes, Persians, Greeks, Romans, Arabs, and Turcoman-Tartaes until 1514-1538, when the greater part became a province of the Ottoman Empire. The Eastern part remained under Persian rule, but in size Russia obtained the larger share of non-Turkish Armenia. The river Euphrates, Tigris, Aras, Eur, and Tehorokh take their rise within its boundaries, and at the meeting of the former Turkish, Persian, and Russian boundaries is Mount Ararat (17,150 feet), the traditional resting place of Noah's Ark. In the uplands the climate is severe, Ark. In the uplands the climate is severe, but in the salleys and plains the soil is fertile, producing all kinds of cereals, cotton, rice, seasure, hemp, flax, and tobacco. Sericulture citikworm breeding, sheep-breeding, and fruit growing are capable of great development. Armenis has great mineral resources hardly as yet developed. Naphtha, sulphur, hitumen, and nitre abound, while the mountains yield salt (mineral and in solution), gold, aliver, copper, lead, iron and valuable marbles; there are also numerous hot and cold mineral springs (similar in assure to those of Vichy). The Armenian Church is the oldest established Christian centres in the colors continued Christian charch, Christiantly having been recomined as the State religion in me, and from the shall century there is a national language and ligarature. On account of their religion the Armobiata harm sufficed a general persentiation by define, problems by in the "Depth of Minte. Battle," Demonstr., State-Chart. um, where =

equation with a view to enterestation. "In suggest these were visiteant deportations with immorree of the Chainline population of Chainline the Armonian, while the Armonian Christians of Ascrbaight and of Emedian Armonia, where involves invitarly treated by Turkish and Kurdish bordes. In sugal, during the Russian Revention, an independent "Republic of Trans-Caucasia" was formed by the union of Georgia, Armonia, and Ascrbaigan, and on the dissolution of the union (June 7, 2928) the Supreme Council of the Allied Powers recognised the independence of the "Republic of Armonia (area, 20, 297 ag, miles, population 2,000,200). Under the Truty of Peace with the Allies (May 2x, 2920). Turkey recognised the independence of Armonia, with its capital at Erivan. The United States dovernment was requested by the Allies to accept a manufactor organized with a view to externel requested by the Allies to accept a mandate for Armenia, but the Foreign Relations Committee of the Senate has declined the mandate.

# AUSTRIA

(Oesterreich).

President, of the Endoration. (Nov. .a., agas), Dr. Michael Mayr. Lice-Chancefor, Edward Heinl.

Education, Walter Breisky.
Finance, Dr. Ferdinand Grimm.
Justice, Dr. Rudolph Raldanf. Agriculture and Forestry, Alois Hausis. Swai Weifars, Dr. Joseph Reach. Commerce and Public Works, Eduard Heinl. Food Control, Dr. Alfred Grünberger. Railmann, Dr. Karl Pesta.

Minister in London, Baron George Franckenstein, 18 Belgrave Square, S.W. 1. First Secretary, Adolph Kunz. Press Attache, Dr. Maxmilian Bach.

Prior to the War the Austrian Empire, joined to the Kingdom of Hungary by the identity of sovereigns, was the largest Empire, next to Russia, on the continent of Europe, situated Russia, on the continuous of any open of action between 42°- 51° N. int. and 9° 30°-85° ao' E. long. It embraced an area of see, 456 action and a population (1924) of nearly 83,000,000, and included Upper and Lower Austria; Sohemia; Bukovina ; Carinthia, Carniola, Dalmatia, Görz and Gradiska ; Istria, Moravia, Naizburg, Silesia, Styria, Trieste, Tyrol and Vovariburg; with Bosnia and Herzegovina as administered territories.

On June 26, 1914, the assamination of the Austrian Archduke Francis at Berajevo (Bosnia) was presumed to be the outcome of a plot fostered by Serbia, and after negotiations ultimatum was presented by the Empire to the Serbian Government (July 32), and non-com-pliance with its unreasonable terms led to the European War of 1924-18. Before the armistice Distance was of 1934-16. Before the armistice of Nov 22, 2938, Hungary had seconded from the Empire (and had established republion institutions) and a Republic of German Austria was declared Nov. 22, 2938, the throne being able cated by the Emperor Ravi (Nov. 28, 2938). Under the Trunty of Rt. Germans (dept. 28, 293) the philiton insighbours of the Austrian-Republic are the Republics of Germany said. Careloo-Slovakia on the Rt., the Kingdows of Raing. The Territory of Flume, and the Yang-Shaw Hing.

menty on the E. in and

The eres of the Republic is 30, 396 square miles, with a population (uses) of 5;059,000.

Takin the new Constitution (Rov., 2000), austria become a Sepublican Federation of eight Previnces:—Liower Austria and Vienna, Upper Austria, Carinthie, Styria, Salisburg, Tyrol, Verariburg and Bargouland (West Hungary); the Bunderrat and Nationairat were constituted; a government formed, and a President elected.
The elections resulted in a majority for the
Christian Socializer (Selpi, Mayr, Maiaja and
Weiskirchner) over the Social Democrats (Regner, Adler and Bauer), the Pan-Germans coming next in order. There is a considerable body of opinion in favour of the inclusion of Austria in optulon in savour or the transfer side, for a close alliance with Hungary.

Complete religious liberty is one of the fundamental laws of the new Republic. In 1915 the prevailing religion of the German-speaking

people was Roman Catholic

Finance.--Before the War Austria had a total indebtedness of about 14,400,000,000 crowns (£600,000,000), towards the annual cost of which (489,000,000 crowns) Hungary made a contribution of \$1,000,000 crowns (a4=£1 sterling). The indebtedness was increased by War credits (up to June 30, 1918) to £2,850,000,000, requiring an annual service of 4,335,000,000 crowns. The annual service of 4,335,000,000 orowns. The pre-war revenue was about 3,600,000,000 crowns (£150,000,000). The Budget of 1519 so provided for receipts of 2,548,860 fix crowns, and for expenditure at 6,546,085,167 crowns, showing a deficit of 3,998,644,553 crowns A Financial Commission has been appointed to make recommendations concerning the indebtedness of the Republic. In Oct., 1919, the Secretary for Finance, announcing the budget deficit of 4,000,000,000 crowns, stated that Austria would not evade her obligations under the Treaty of St Germain. In Oct., 1920, the Austrian budget showed a deficit of over 13,000,000,000 crowns, the rate of exchange at that time (at as to the £ before the War) being about 1,200 tothe £. The Austrian section of the Reparation Commission is employed on an exhaustive examination of the resources of the country and has considered far-reaching proposals for financial reconstruction.

Industries. -- The principal industry is agriculture, the chief products being wheat, harley, oats, rye, maise, and potatoes. Forestry and attack raising are important. The forests are principally conferous trees. The live-stock includes horses, cattle, sheep, pigs and goats. The vine is extensively cultivated. Among the minerals produced are common and brown coal, iron, had, and, silver and copper. The principal manufactures are woollens, cottons, glass, steel,

wood-work and brewing.

Communications.—In Sept., 2929, there were about a so miles of railway (exclusive of narrow gauge lines). The mercantile marine was comsiderable in 1914, but the new Republic is now land-looked.

Commerce.—The Commerce of the "Common Customs Territory" of the Dual Monarchy of Austria and Hungary amounted in 1913 to Autria and hungary amounted in 2923 to 24-sees, see for Exports, of which totals £5, sees, see (imports from) and £7, sees, see (Exports to) represented the exchange with the United Kingdom Austria has free railway seess to the scapert of Fluxes in the neutral sum (see Yago-Sinvis), but no ports of her own.

Defence.-During the War of wice-18 shout g.co.,co., all ranks, were passed into the common Army of Austria-Hungary. The total daematics exceeded a.g.o.,co., of whoth over yea,cos were returned as killed. Under the Tresty of St. Germain the military, naval and air forces were demobilised and reduced to minimum requirements and all warships were surrendered to the Allies, those under construction being broken up. Service in the Republican Army is by voluntary enlistment for twelve years

Towns.—Vienna, the capital, is situated on the River Danube; in zero it contained an estimated population of a cooper. Other large townsjare Gratz (277,000), Linz (93,000), and

Inusbruck (60,000). CAPITAL. Vienna

A Kingdom of Central Europe, with a total area (1980) of 22,396 square miles and a popula-tion (Census of 2989) of 7,577,607. Belgium is bounded on the N. by the Kingdom of the Netherlands, on the S. by France, on the E. by Germany and Luxemburg, and on the W. by the The kingdom formed part of the "Low Countries" (Netherlands) from zers until (ct. 14, 1820, when a National Congress pro-claimed its Independence, and on June 4, 1821. Prince Leopold of Coburg was chosen bereditary king. The separation from the Netherlands and the neutrality and inviolability of Belgium were guaranteed by a Conference of the European Powers, and by the Treaty of London (April 20, 1839), the famous "Scrap of Paper," signed by Austria, France, Great Britain, Prussia, The Netherlands, and Russia. On Aug. 2, 2924, the Germans invaded Belgium and ultimately over-came the resistance of the fortresses and overran almost the whole country. In revenge for the heroism of its defenders the Germans sacked and destroyed many cities, burning Louvain (with its library), Termonde, and other places, aud established a reign of terror. They levied a war contribution on Relgium of close on £100,000,000, apart from enormous fines on localities, firms, and private persons. On Friday, Nov. 25, 3928, at the great turn of the tide, Antwerp was re-occupied by the victorious Belgian army, and Brussels and the remainder of Belgian soil a few days later. About 'so,eeo persons were added in zero by the cession of Moresnet and part of Valmedy by Germany, and the district of Eupen, with the remainder of the district of Mainiedy, were ceded by Germany and annexed

by Belgium (Sept. so, 1980) after a plebiscite, thus adding a further so,000 to the inhabitants. French and Flemish are the joint official languages, but while French is the language of the upper classes. Flemish is spoken by the majority, preponderating in Flanders, Limburg, and Brahant, including Antwerp. Nearly all the inhabitants are, at least nominally, Roman Catholics

Beignum has a frontier of \$32 miles, and a seahoard of 4s miles. The Meuse and its tributary the Sambre divide it into two distinct regions. that in the west being generally level and fortile, whilst the table-land of the Ardennes, in the cast, has for the most part a poor soil. The "poiders" near the coast, which are protected by dikes against floods, cover an area of 193 sq. mailes. The highest hill, Baraque Michel, rises to a height of 2,39 feet, but the mean elevation of the whole country does not expect gaf feet.

The principal rivers are the Schelds (Beenst) and the Mass (Massa).

and the Mass (Messes). Brussels has a mes temperature of get T. (ensumer & ", winter ge"). GOVERNERY.—The constitution jointly vos the legislative power in the King, the Sensa and the Chamber of Representatives. The mes

latter for four years. Universal male sufferge, with plural voting up to three votes by property and educational smalliteations, was introduced by the Electoral Law of sign, proportional representations being secured by an Aot at ages, in April, ages, the Beigian Parliament decided as an emergency measure to hold ages elections on a "one than use vote "basis for Seaste and Chamber. (Unmarried widows of soldiers the killed before Jan. , uses of falling widows the killed before Jan. z, 1919, or failing widows, the mothers; widows or mothers of civilians shot by enemy; women impriso patriotic acts, also voted.) women imprisoned by enemy for

This Parliament, anomalous, and unconsti-tutionally elected, was required to make constitutional the machinery by which it was elected; i.e., to revise article 47 of the Consti-tution. This has not yet been done (Oct. 1980), but it is unlikely that the outworn method of plural voting will ever again be resorted to.

Deputies receive 4,000 france a year and a free pass over the railways. There are in addition representative Provincial and Communal Councils, elected on a somewhat more liberal

franchise. Production.—Agriculture and intestry are the portant industries, the chief crops being oats, rye, wheat potatoes harley and murar-beet. Under Amer IV. of the Treaty of Vermilles Germany undertook to deliver to Belgium certain live stock to replace the animals seized or destroyed during the War of ross-ross. Belgium is essentially a manufacturing country, and it is largely dependent upon foreign supplies for its food. The mineral kingdom yields coal, iron, sinc, lead, The minerat kingdon's jenia coal, irvin, zinc, jead, and copper. The leading industries are colliceries, quarries, and metallurric (Mous, Charleroi, Liège, Namur, Hainaut, and Brahaut), glass, textiles (Verviers), lace (Brussels, Mechilu, Bruges, &c.), flour and starch milla, sugar, distilleries, breweries, &c.

DEFENCE.-In 1914 the Army on a peace footing consisted of about go,ooo, all ranks. In the War of 1914-1918 over 500,000 passed into the armies, which were reorganised on French territory during the defensive period of the cam-paigns. An organised force of sec.coc or-operated with the Allies during the decisive offensive of the autumn of rgrs. Those returned as dead or missing, during the War, numbered 108,38s.
Belgium has no Navy.

EDUCATION .- Schools are maintained by communal taxation, with provincial and State grants, while many are under ecclesiastical control, koman Catholic largely predominating. There are 134 State high schools, including 44 for girls, and numerous private institutions. Special schools abound. The Universities of Gheut and schools abound. Liège are maintained by the State; those of Brussels and Louvain are free institutions. Louvain University is to be rebuilt.

france), tongumentum articles equipment, foodstuffs and heverages (gel, ze, gan).
Communications.—In zons there were 4,729 kilometees of railway (including branch lines and gas kilometres of private lines reneed by the state); by Jan. s. sas. almost the whole length destroyed during the War had been spasined or relaid. In sque there were 44,568 kilometres of telegraph wire and a.sgs offices; in sg19, s4,397 kilometres had been restored and the s,seg offices re-opened. In sgso, the post office had resumed full operations. The mavigable rivers and canals have a length of a, 276 kilometros (1922), and there are 9,787 kilometres of roads. Most of the maritime trade of Reigium is carried on in foreign bottoms, the mercantile marine only consisting (1912) of 105 vessels (z8z,637 tons), in addition to which there were 453 fishing boats. In zgzs, 9,s68 foreign vessels outered at Belgian ports (tonnage 24.497, 202). The principal port and commercial entreport is Antwerp, on the River Scheldt. Other portugues, Misuport, Blankenburg and Zeebrugge (blocked by the British Fleet Agrit 103, - spell of and minus re-opened for traffic). The vexed question opened for of the Scheldt, of which the right bank is in Netherlands territory and the left in Beigium, appears likely to be settled by negotiation between the respective Governments. navigation is to be free to both countries, from the mouth to Autwerp, and the Netherlands war vessels are to be removed from the river.

The Capital, BRUSSELS, had a population in sors of 175.809 (with suburbs, 756,637 inhabitants) Other towns with over 200,000 inhabitants are Aniwerp, the oblef port (318.884 with suburis, 418,917); Ghent (167.477), which has large cotton and flax spinning mills, and is the second port of importance after Autwerp, while its flower shows are famous ; and Liège (170,634) the centre

of the fron industry.

## THE BELGIAN CONGO.

The Independent State of the Congo became a Beigian Colony by a law of Oct. 28, 296

The total area amounts to 909,654 sq. miles, with a native population estimated at 5,000,000 to 7,000,000. The total European population (Jan. 2918) was 6,487, of whom (in 1912) 379 were British, 48 Americans, 278 Italians, 393 Portuguese, 177 Sweden, 150 Germans, and 3,397

Belgians.

The Congo River is navigable for large ve from its mouth at Banana to Matadi (og miles), where the European steamers discharge and recharge their cargo; but between that place and Leopoidville, on Stanley Pool, there occur rapids and falls which have been avoided by a railroad asemiles in length. A narrow-gauge line runs from Lukula to Boma, the cocos planting district of Mayumbe. Above Leopoldville the river and its numerous affinents are navigable by steamer for about 5,000 miles, the falls on the Upper River being avoided by a metre-gauge line from Stanleyville to Ponthierville (see kilometres), and another from Kindu to Kongolo (385 kilometres). Another line from Kabalo to Albert-ville on Lake Tanganyika (270 kilometres) was completed in 2016, connecting the West Coast of Africa with Beigian East Africa and the East Coast. The Katanga Railway reached Bukama in May, 1918, thus linking up the Rhodesian Railway system with the steamers plying on the Upper Congo River, connecting with both the East and the West Coast. Within eight years, 450 miles of railway have been constructed, see of which have been laid during the war. It is now possible to travel by train direct from Cape Town to the river Congo, a distance of a,650 miles. Work has been started on the Stanleyville-Lake Albert Railway, which will run between the Congo River and th Nile, providing the last link to direct river and rail communication between the Cape and Cairo. I we new lines will run from the copper mining district of Katanga towards the West Coast, one of them reaching Lobito Bay (Portuguese Angola), the other linking the Katanga Railway with the Matadi Leopoldville Railway. A telegraph line is laid from Banana to Counilhatville (Bog kilometres). There is telegraphic communication with Europe. Fourteen wireless stations con-nect the West Coast with the principal Government statious throughout the Colony. Powerful wireless stations were being erected at the outbreak of the war at Brussels and Bonna, to connect heighum with the Lower Congo. The West Coast District has a rather sounty rainfall (se inches), but on the Majumbe Hills and in the whole interior the rainfall averages between ( whole interfor the rainfall averages between 6s and 8s inches, and the country is very fertile and productive. Sleeping slokness, once very prevalent and destructive, is now decreasing. Extensive forests over the central districts; oil palme are plentiful everywhere, and supply an ever-increasing trade in palm-oil and palm-kernels. Wild rubber and wild codes are common; coffee, ecoop. Park and Count rubber and outon are successfully plasted. Mines are very extensive. The copper district of Kanara has encorreced deposite of counter our, and langa has enormous deposits of copper ore, a passes tons of copper in spel.

extends from Bukama towards Lake Tanganyika. The gold-bearing districts of North-castern Cougo are being prospected by the Government, and contain both alluvial and reef gold. Dis-mond-bearing gravels are worked in the south. mond-bearing gravets are worked in the south. The total imports during the year sage were valued at 25,504,75a france: the exports are mostly paim-kernels and paim-dil, 1-ory, rubber, gum-copal, cooca, copper, gold and diamonds. Capital, Boma (pop. goe whites, a.coe natives). Principal towns, Elisabethville (Katanga) (pop. 2,000 whites, 6,000 natives); Stanleyville (see whites, 6,000 natives); Coquilhatville, Kinshasa (Stanley Popl.) and Leopoldville. (Stanley Pool), and Leopoldville.

Exports to U.K. (1918) ..... ... 1,502,655

By the Anglo-Belgian Agreement of July, 1919, the districts of Ruanda and Urundi, portious of the former territory of German East Africa (see "Tanganyika Territory"), which adjoin the Belgian Congo on the E., were assigned by Great Britain to Belgium. Ruanda and Urund: formed the N.W. corner of German East Africa from S. lat. to the S borders of (British) Uganda and have an area of about 15,000 square inites, with an estimated population of 3,000,000. They lie E of Lake Tanganyika and S.W. of the Victoria Nyanza, and include the most fertile and productive portions of the former German posnession. They are traversed by a railway from Ajiji (8.), to the Uganda boundary (N.).

#### BOXHARA.

Einer of Bokhara, B.H. Said Mir Alim Khan, b. 1880, micreeded 1911.

Bokhara is a Central Asian State with an estimated area of 85,000 square miles, and a population of 1,250,000, the majority being Muhammadan Uzbegs. The capital (Bokhara) is a station on the Russian Trans-Caspian Railway, and has a population of about 75,000 The principal products are rice, wheat, fruit, hemp, cotton, and siik. Exports (mainly to Russia) are agricultural products and silk and russia) are agricultural products and slik and cotton manufactures; imports are principally manufactured goods and sugar. Until the Rus-sian revolution of 1927 the Emir was under the suzerainty of the Twar. In Aug., 1920, a revolu-tion, organised by Bolshevik (Red) emissaries, world the against seized the capital, and the Emir took refuge in Afghanistan.

thing in Landon, these accurage measurements at Severiery, and Severiery, sellor Mamerto Urricagoitia. Officer of Legatives, as Molland Park, W. 22. Consul-denezal (noting), Sehor Mamerto Urricagoitia, 40 Cophhell Avenue, E.C. 2. Tho-Respublic of Bolivia extends between lat. 5° and ag S. and long. 37° 30° and 73° W., and its area is about \$57,495 square mine, with a reasusailatian in Jan. sare estimated at 2,500,000. population in Jan. 1927 estimated at a,800,000. The Bépublic was formerly comprised in the Spanish Vice-Royalty of Alte-Peru, and derives its present name from its liberator, Simon

Bolivar, (born 1783, died 1830).

Mining and agriculture are the principal industries, the mineral productions being very valuable. The ancient silver mines of Potosi are now worked only for tin, but gold, partly dug and partly washed, is obtained on the Eastern Cordillers of the Andes; the tin output is, after that of the Straits Settlements, the largest in the world, while copper, antimony, wolfram, bismuth, salt, and sulphur are also found. Its agricultural produce consists chiefly of rice, tarley, oats, maize, cotton, coca, indigo, india-rubber, cacao, potatoes, cinchons bark, medicinal herbs, &c. Bubber and cinchona bark are exported in addition to the copper, wolfram, blamuth, sliver, antimony, hides, and wool, the chief imports being iron, cotton and woollen goods, hardware, and silks. There are about 1,126 miles of trunk lines of railway in operation, and 250 miles under construction; and 4,000 miles of telegraph wire. There are wireless services between Elberalta, La Pas, Coblja, Capitandi (Chaco). There is direct railway communication to the sea at Antofagasta (s days), Arica (s day), and diolendo(s); days), and showith a gap of as miles to Buenos Airos (s days), and from Rio Mulato Potosi: branch lines run from Ormo to to Potosi; branch lines run from Oruro to Cochabamba. Construction on the railway be-tween La Quiaca and Tupiza, in Bolivia, which, when completed, will allow through railway communication with Buenos Aires, is in the communication with Business Aires, is in the lands of a French firm. The gap between Tupaza and La Quiaca is crossed by an automobile service, taking one day. Communication with Peru is effected by rail to Guaqui and thence by steamer across Lake Titicaca to the railroad at Puno. Proposed railway from Guaqui to Puno temporarily abandoned. The principal line is the Autofagasta and Holivia ratiroad (729 miles), and a line from La Paz to the province of Yungas may eventually connect with the steamers on the rivers Besi, Mamoré, and other tributaries. Its construction has recently been begun by means of a loan made in New York. A line from Potosi to Suers, the legal capital, is under construction. The Republic capital, is under construction. The Republic intends to appeal to the Langue of Nations for an outlet to the Pacific, of which she was deprived in the "Pacific War" of 1879-1884 (see Chile). The Peace Army amounts to about 5,eec, all ranks, the War Effective being about

Committee, in Liverpool, Dario Freire Brazil, the most extensive State of South America, discovered in 1900 by Pedro Alvares Cahral, Portuguese navigator, is bounded on the porth by the Atlantic Ocean, Guiana, and Venemetric of the west by Kenador, Feru, Bolivia, Faraguay, and Argentina, on the senth yiriguay; and on the senth by the Atlantic Grean; and extends between tat. 4° as' N and 23° 48' N, and long, 26° 48' and 27° 28' N, being 2,600 miles from north to mouth, and a,goo from a second to the senth and a goo from the senth and a goo from the senth and a goo from the senth and a goo from the senth and a goo from the senth and a goo from the senth and a goo from the senth and a goo from the senth and a goo from the senth and a good from the senth and a good from the senth and a good from the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the senth and the s west to east; with a coast-line on the Atlantic west to east; wish a grass-size on the Affantic figure index, the Republic comprises an area of a.est. Special continued at ac. appears while, with a population satisfact at ac. appears of Amazonee and Fariand the panies Blates of Matto Grass (which inquisites considered some three case hatter Target)

lare mainly wide, low-lying, for ectors and

The eastern and southern States are travely successive mountain ranges interspersed with etile valleys. In the extreme south, towards the interior, the land rises by gentle gradations to the height of a see to 5,000 feet above use level. The principal ranges are Serva to Marin 800 Paulo; the Serva do Mantiqueira (Italialassu, e.coe), and the Serra do Espinhaco (Itaco-lumi, 6,000 feet), in the south-east of Minas Geraen; the Serra do Paranan, between Goyaz and Minas Geraes, the Serra dos Aymores, which divide Espirito Santo from Minas Geraes; and the Serra da Gurqueia, Branca and Araripe, which envelop Piauhv.

Brazil is unequalled for the number and extent of its rivers. The Amazon, the largest river in the world, has tributaries which are themselves great rivers, and flows from the Peruvian Andes to the Atlantic, with a total length of some 4,000 miles. Its northern tributaries are the Rio Branco, Rio Negro, and Japura; its southern tributaries are the Jurus, Purus, Madeira and Tapajos, while the Xingu meets it within see miles of its outflow into the Atlantic. The Tocantins and Araguaya flow northwards from the Plateau of Matto Grosso and the mountains of Goyaz to the Gulf of Para. The Paraahyba flows from the encircling mountains of Planhy into the Atlantic. The São Francisco rises in the South of Minas Geraes and traverses Bahia on its way to the Eastern coast, between Alagoas and Sergipe. The Pavagnay, rising in the south-west of Matto Grosso, forms a boundary with Bolivia on its way through Paragusy to its confluence with the Parand, which rises in the mountains of that name and divides Brazil from

GOVERNMENT .- Brazil was colonised by Portugal in the early part of the sixteenth century and in 1822 became an independent empire under Dom Pedro, son of the refugee King Joho VI of Portugal. On Nov. 25, 2559, Dom Pedro II, second of the line, was dethroned and a republic was proclaimed. The constitution rests on the fundamental law of Feb at, 1891, which established a federal republic under the name of Estados l'aidos do Brazil. The President and \ke-President are elected for 4 years by the direct votes of all male Brazilians over as years who can read and write; they are ineligible for the succeeding term. They are aided, as an executive, by a Council of Ministers, who are responsible to the President and not to the legislature. Congress consists of a Senate of 63 members and of a Chamber of Deputies of size members, members of both houses are paid. The language of the country is Portuguese, foreign languages being read and spoken in the following order —French, Raliau, English, German and spanish.

PRODUCTION -The minerals are very considerable and valuable, comprising gold, silver, iron, diamonds, topases, and other precious stones. The immense iron deposits have been scarcely touched. Manganese is exported, and there are important deposits of monosite sand. Low-grade coal deposits are in the south. Its agricultural produce is abundant and its forests are immense. produce is abindant and us foress are numeros-cattle-raising is an important industry, the number being computed at g. os. os. The chief products of the country are coffee and rubber: the rubber comes from the more northern provinces, especially the valleyed the Amason, and is shipped from Park and Mandan at European and is shipped mina- Sio Panio. Tobaccon 2.000

especially in Bahia. Cotton is being largely cultivated. Bugar-tane is grown in large and increasing quantities in the northern provinces, Pernambuso being the centre of the sugar-producing zone. The exports include also mest, hides, maize, beans, and Yerie-mest (tea). The imports consist principally of every inecription of manufactured articles, but there were (1913) 1,541 industrial establishments, including 262 cotton-mills, giving employment to ac acan hands, and reprocepting an invested capital ecially in Bahia. Cotton is being largely 45.000 hands, and representing an invested capital of \$50.000.000. Foreign capital to the amount of £300,000.000 has been invested in Brazilian un dertakings in the ten years 1908-1917. The total value of manufactured articles imported in the first six months of 1919 was £19,638,000; the enormous protective duties were again increased in 1807, 1893, 1896, 1906, and 1916. In 1918 the exported merchandise was classified (1) animals and their products, £7,576,000; (a) minerals and their products, £7,560,000; (3) vegetables and their products, £34,308,000. In 1916 the total value of the exports exceeded that of the imports by £7,507,000, in 1917 by £12,770.000, in 1918 by £6,728,000; and from Jan June 1929, by £30,463,000. In 1929 (Jan June) the exported merchandise was classified: (1) animals and their products, £8,844,000; (a) minerals and their products, £943,000; (3) vegetables and their products, £52,359,000. In 1919 (Jan. June) the imports were From

The Kingdom of Bulgaria is bounded on the north by Rumania, on the west by Yugo-Slavia and Greece, on the east by the Black Sea and the Greek province of Thrace, and on the south by Greece, the Egean Sea and Thrace.

A Principality of Bulgaria was created by the Treaty of Berlin (July 13, 1878), and in 1885 Eastern Roumella was added to the newly created principality. In 1908 the country was declared to be an independent kingdom, the area at that date being 27,200 square miles, with a population of 4,237,500. In 1912-13 a successful war of the Balken League against Turkey increased the size of the kingdom, but in August, 1913, a short campaign against the remaining members of the Loague reduced the acquired area, and led to the surrender of about 2,000 square miles to Rumania. On Oct. 22, 2925, Bulgaria entered the War on the side of the Central Powers by declaring war on Serbia. She thus became involved in the defeats of 1918, and thus became involved in the defeats of spis, and on Nept. 29, 1918, made an unconditional surrender to the Allied Powers. On Nov. 29, 1929, she signoid the Treaty of Newlitz, which coded the R. Dobrud to Rumania and E. and W. Thrace to Greece. The present area of Bulgaria is atsted at 125,000 ag. kilometras (= 71,425 ag. miles), with an estimated population of 4,975,000. The provailing religion of the Bulgarians is the Orthodox Greek Church. In 1926, the Gregorian was substituted for the Greek Calendar. (TO ERNEMERT.—The executive power is vested

(in) BENMERT. - The executive power is vested in the Tsar, and is exercised by a Council of Ministers, appointed by him. The legislature is a single chamber National Assembly or Sobrange of any representatives, elected for a maximum term of four years by adult manhood suffrage. Motropolitan members receive ag lens, and others as less, a day and describing impasses.

PRODUCTION.—Agriculture, is the peineigal industry of the people and employs over last the population, the principal crops being wheat, rye, barley; oats, tobacco and frank. The live stock includes sheep, goats, cattle, pigs, horses, cases and muies. Coal of good quality is mined at Pernik and Trevna, and stone, iron, gold, silver, lead, mangance and copper are worked, but the mineral development is in its infancy. The object manufactures are weedlens controls The chief manufactures are woollens, cottons and eigarettes. The exports consist principally of cereals (especially wheat), live stock, e or coreans (especially wheels, have stock, essentially of roses, woollens, akins, cheese, eggs, timber, cocoons, and tobacco; the principal imports being textiles, metal goods and machinery, colonial wares, leather, building materials, petroleum and other oils, paper, salt fah, rice, and coal.

DEFENCE.—Before the War of 1924-1928 service in the Army was universal and compulsory,

and on a peace footing it numbered about \$6.00 all ranks. During the War (Oct. rors-Sept. 1918) about 550,000 passed into the ranks of the Army, and of those over aso, soo became casual-ties. By the Treaty of Neully the Bulgarian

Army is limited to so, one all ranks.

EDUCATION is free and compulsory and the proportion of attendances is good; the number of illiterates in Bulgaria is very smail. There are few technical schools. Sofia has a University. COMMUNICATIONS.—There were a sag miles of

railway open in says and about as miles of construction; 4,eee miles of telegraph line and 1,sas of telephone line. In 1914 there were assay pust offices and 438 telegraph offices. The principal Black Sea ports are Varna and Bourgas; and Rustchuk, Sistor and Vidin on the Danube. In 1913, 11,755 vessels (3,12s,481 tons) entered and 11,710 vessels (3,108,505 tons) cleared at Bulgarian ports.

**\***1917. \$zoz& Rudget revenue ........ £27,520,000 £19,250,000 Rudget expenditure ... 27,520,000 19,180,000 Budget expenditure ... Public debt (Jan. x, 1918) †x13,840,000 Total Imports(1913&1914) 6,850,000 9,670,000 6,180,000 Total Exports (1913&1914) 3,730,000

The Capital, Sofia, at the foot of the Vicesia Rauge, on the River laker, about age miles from the Black Sea port of Varna, and mag miles from Lom-Palanka, on the Danube. Sofia is the most modern city in the Balkan Peninsula, and an important station on the Vienna-Constantinople railway, station on the Vienna-Constantinopie Failway, with an estimated population (1990) of soo,600; other towns are Philippopolis (47,981), Varna (41,491), Rustchuk (36,383), Silvno (33,144), Pievna (33,383), Shumla (38,383), Staro Zagora (38,000), Jambol Tartar Payardjik (18,000), Wildin (26,000), Jambol (16,000), Vratza (15,000), and Burgas (15,000).

A State of South America, of Spanish origin, lying between the Andes and the shores of the Ning netween the Anners and the shores of the South Pacific, extending coastwise from the Rio Sama to Cape Horn south, between lat. zy' zo' and \$6' 3g' R., and long. \$60' 30' and 75' 48' W. Extreme length of coast-line about z,485 miles. Its ex-treme length is about z,800 miles, with an average breadth, borth of 4z', of soo miles. The great chain of the Andes runs along its eastern limit, this process of the contraction of the contraction of the Andes runs along its eastern limit, with a general elevation of 5,000 to 15,000 feet alms e the level of the sea ; but numerous summits attain the height of 18,000 feet-the highest are the Guallatiri, 19,88e feet; the Bays, 19,993 feet; Cocorputi, sa, res feet; El Muerto, sa, say feet; and others nearly as lofty. The chain, however, lowers considerably towards its southern extremity There are no rivers of great size, and none of them are of much service as navigable highways. In the north the country is arid. Chile is divided into s3 provinces and a territory, the aggregate area of which is estimated at

a89.792 square miles.

The population was estimated in reso at 4.165.858. Included in the population are four distinct racial divisions; (a) the Spanish settlers and their descendants; (b) the indigenous Araucanian Indiana, Fuegians, and Changos; (c) mixed Spanish-Indians; and (d) European immigrants, who were represented in zere by 20,000 Spaniards, 25,000 Italians, 22,000 Germans, 20,000

British and firsh, and zo.coe French.
In 1928, the births numbered 193,593; marriages, 25,524; and deaths, 206,569. The principal towns, with their estimated populations (1928), are:— Santiago (415,641), Valparaiso (212,659), Voncep-cion (72,765), Talca (42,562), Iquique (46,941), Chillan (34,269), and Antofagasta (64,564). GOVERNEET.— Chile was discovered by

GOVERNMENT. — Unite was discovered by Spanish adventurers in the right century, and remained under Spanish rule until zine, when a revolutionary war, culminating in the Battle of Maynu (April 3, 2523) achieved the independence of the nation. The present constitution hears the date of May 25, 252. The President is chosen by address vote. The Stational Congress consists of a Season of the numbers and a Stationard of a Senate of 27 members and a Chamber of Deputies of members, elected by direct vote every three years. There is universal adult mate sufface. See these who can read and write-From abye-able Chile was at war with Fern and to £2.500,000

Bolivia, and Peru is now renewing her applica-tion for the return of the provinces of Tains and Arica which were taken from her by Chile-in the "Pacific War." Bolivia also demands an outlet to the Pacific. Chile-has shown a con-ciliatory attigude in these matters. PRODUCTION, &C.—Agriculture and mining are

the principal occupations. Wheat, make, barley, oats, beans, peas, leutils, wines, tobacco, flax, hemp, Chile pepper, and potatoes are grown ex-tensively; the vine and all European fruit-trees flourish. The live stock includes about \$,500,000 cattle, 5,500,000 sheep, 500,000 horses, 200,000 goats, and 25,000 pigs. The mineral wealth is considerable, the country being extremely rich in epiper-ore, and iron-ore. The rainless north yields more especially nitrate of sods, iodine, horate of sods, gold and silver, a large number of mines yielding both being in actual work in Tarapaca, Guanaco, and Cachinal in Atacama, and Caracoles in Antofagasta; the centre, copper and silver; and the south, iron and coal (1,500,000 tons of coal were mined in 1918). The nitrate production was valued at 500,376,560 peops (of 186.) in 1918, and the copper exports were valued at 122,765,586 peops. There are smelting-works for copper and silver, tanneries, and the couple of the same time of the same time. corn and saw mills, starch, soap, biscuit, rope, glassware, paints, mineral waters, boot and shoe, hosiery, hat, cloth, cheese, furniture, candle, and paper factories, incweries and distileries; and the domestic industry furnishes cloth, entries; and the domestic modely transfer opti-embroideries, baskets, and pottery. The many ports favour commerce, and six lines of steamers connect the country with Pansma and the Ma-gellan Strait direct with Europe, a passage to liverpool occupying from 30 days. The staple articles of export are nitrate of sola, iodine, &c., copper bars and ores, silver ores, corn, flour, hides, wool, and beans. The imports include silks, woollens and other textiles, food, and machinery.

COMMUNICATIONS. - There were (1919) 8,322 kilometres of railway open and 576 kilometres under construction, 55,330 kilometres of telegraph, 927 post-offices, and 71,519 kilometres of telephone, some worked by English companies, with 7 public wireless stations. The commercial marine numbers (1918) 93 steamers (46,587 tons) and 35 sailing vessels (23,385 tons). In 1918, 2,389 vessels (4,682,597 tons) entered Chilcan ports

from abroad.

DEFENCE.—All able-bodied male citizens from soth to 45th year must serve in the militia. The peace effective of the active army is 15.77%. The navy consists of 1 hattleships, 1 ironclad, 6 cruisers, 10 destroyers, 1 torpedo-boat, 2 torpedo boat chasers, and 6 submarines, with 2 com-

boat chasers, and a submarines, with a com-plement of 6,000, all ranks.

EDUCATION is free but not compulsory, and 40 per cent. of the population are still illiterate. There is a Mtate University at San-tiago. The National Library contains 168,600 a volumes. The language of the country is Spanish and the State religion is Boman Catholic.

#### AREA AND POPULATION.

Territory.	Square miles.	Population.
China Proper	1,901,000	408,000,000
Manchuria	360,000	22,000,000
Mongolia	1,076,000	3,000,000
Tihet	75:,000	3,000,000
Eastern Turkestan	600,000	8,000,000

Total 4,287,000 481 000,000

China proper (or the Eighteen Provinces) contains an area of over 1,500,000 square miles. It length from north to south is 1,560 miles, and its breadth 1,500 miles, and its population, according to the latest Chinese estimates, exceeds 400,000,000.

china became a Republic on Feb. 23, 2912, with a President and Vice-President and an Executive Ministry, and a Legislature of a Henate (Tean Yi Yuan) of set members and a House of Representatives (Chang I's Yuan) of set members and a House of Representatives (Chang I's Yuan) of set members. The government of the set may income is entrusted to civil and military generatives, and under them each province is subdivided into circuits auperintended by Tueyins or intendiate, and again into districts. All the territorial officials are appointed by the central Government, and the provincial governors, though free to act independently in many matters of local detail and finance, are responsible to the central Government at Peking in all important questions, and especially so in foreign affairs. The Treaty of Kachkas, 2022, between China, Russia, and Outer Mongolis recognises the Hutukhts Khan as Ruler of Outer Mongolis, while China, as the Suscial Power, appoints Residents at Urga and three other towns. The civil government of the three Manchurian provinces and of Turkestan is now similar to that of the province of China proper.

FOREIGN RELATIONS with the Chinese Empire have existed for many centuries. In the syth century the Venetian merchant-adventurer Marco Polo resided in Cambaluc (the present Peking), and was employed by the Mongol Emperor Kublai Khan as advisor. In the 17th century Jesuit missionaries had attained considerable infinence, but their power aroused jealousy, and they were expelled. The Dutch and Portuguese traders had for conturies maintained commercial dealings with the port of Canton, but towards the end of the rith century they were largely displaced by the British Basinaia Company, and when the Company's monopoly was withdraws, in sign, she position of British merchants in Canton became a national question, and contributed towards the first Chinese War of sign. A treaty was signed at Nunking, as the runth of these operations, coding Hong Kong to Great Eristin end open-

ing five porte to foreign trade wind residence; but the principle of extra-territoriality was ma tained, and foreigners remained amenable only to the laws of their own countries. The con-tinued countsiveness of the Chinese Government led by a long chain of events to the war of 1850. when British and French troops esptured Peking and burnt the Summer Palace. From this date the development of foreign trade began to be most important. In 1894 China fought a disas-trous war with Japan, resulting in the loss of Formosa and the establishment of Cores as an independent state. An abortive attempt was made, in 1898, by the Emperor to introduce administrative reforms, but his reactionary ministers persuaded the Dowager Empress (his numblers persuaded the roins of government.
Under her rule a plot was hatched to rid the
country of foreigners; and in the summer of 1900 the Legations in Peking and the foreign settlements in Tientsin were flercely attacked and bombarded for many weeks. The situation was relieved at its most critical moment by the arrival of an allied army despatched by nearly all the Treaty Powers, and Tientsin and Peking were captured. The Imperial Court field, and remained in voluntary exile until carly in 1908. Meanwhile, a Peace Protocol was signed between the Envoys of the Treaty Powers and the Chinese Plenipotentiaries, Prince Ching and the late Li Hung Chang. This pro-vides for an indemnity of \$305,000,000, to be paid within the next the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control within the next 39 years. Subsequent negotiations rounted in 3 new commercial treaties—
(1) between the U.K. and China (5 Sept., 1908); (a) U.S and China (8 Oct., 1903); and (3) Japan and China (9 Oct., 1903). Under the two last and China (9 Oct., 1993). Under the two last Mukden, Tatungkow, Chang-sha, and Antung in Manchuria, were made Treaty ports.

On the conclusion of the war between Russia and Japan in 1905, a Treaty and Additional Agreement relating to Manchuria were entered into between Japan and China. By the former the Chinese Government consented to all the transfers and assignments made by Russia to Japan in Manchuria; and by the latter the following cities and towns in Manchuria were opened as places of international residence and trade:—Feng-huang-ch'eng, Liao-yang, Hsin-mintun, Tung-chiang-tzu (on the Liao River), and Fa-ku-men in Fengtien Province; Ch'ang-ch'un, Kirin, Harbin, Ninguta, Hunch'un, and Sansing in the Kirin Province; and Tsateihar, Hallar, Albun and Manchuli in the Hellungchlang

Province.

Province.

In October, rgrs, a revolution broke out in Hankow, which resulted finally in February, rgrs, in the abdication of the Manchu Dynasty in favour of a Republican form of Government. In rgrs, a second revolution, engineered by the Postshern Farty, was successfully put down by President Yuan Shih-had. Since that date the Cestral Government has been gradually one solidating its position, and bringing about a centralisation of power in Peking. In May, 7935, a new treaty with Japan was concluded by which additional privileges are granted to Japanese in Mancluria and Mongolin. Towards the end of rgrs President Yuan Shih-had engineesed a compagn to revert to a Monarchical force of government, and, as the vessit of chotion held all over the country, was invited to assend the throne in Russey. \*The Southern President Accessed in Manchales and Additional President Accessed in Manchales and Additional President Accessed in Manchales and Additional President Accessed in Manchales and Additional President Accessed in Manchales and Additional President Accessed in Manchales and Additional President Accessed in Manchales and Additional President Accessed in Manchales and Additional President Accessed in Manchales and Additional President Accessed in Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales and Manchales an

the death of Yuan Shih-kai in May, age. The Vice-President, Li Yuan-hung, succeeded to the Presidency, and all traces of the Yuan Shih-kai riging were rapidly abolished. The first Repub-riging were rapidly abolished. The first Republican Parliament reassembled, and the government reverted to the Republican form adopted after the overthrow of the Manchu Dynasty in ages. Both Houses of Parliament are elected by a system of limited franchise, and the government of the country is vested in them. The President, who is elected by Parliament, is assisted by a Premier and a Cabinet of Ministers, whose appointments have to be approved by Parliament, and to whom they are responsible for their actions. An abortive attempt to restore the Monarchy was suppressed in June, segy. In reso a revolt in South Unina comminated in the declaration of an independent Republic of South China (with its capital at Chung King) including the former provinces of Yunnan, Kwei Chow, Sze Chuen and Honan, but this Republic has not yet been recognised, and internal and external discussions appear to threaten its existence.

The estimated foreign population of China during the year 2914 was as follows: British, 8,924; Japanese, 84,948; Russian, 56,319; American, 4,365; Portuguese, 3,187; German, 3,073; French, 1,864; other nationalities, 2,297, the total being 164,807. Out of a total of 3,422 foreign firms in China, 534 were British, 1,237 Russian, 925 Japanese, 273 German, 136 American and 113 French.

DEFENCE.—The army is undergoing reorganisation. The total strength of all forces in August 1913, just after the Rebellion of that year, was estimated at 500,000, but no authenticated statistics are obtainable. An Air Force is being organised, with the assistance of a British officer (Group-Capt. F. V. Holt, C.M.G., D.S.O.). The Navy consists of a protected cruisers built in 1911 (s,750 tons), 4 older protected cruisers in spar (2,730 tollar), a torpedo gunboats (850 tons), az gunboats (750 550 tons), 4 destroyers (400 tons), and 8 small torpedo boats (250 tons).

EDUCATION.—Many changes in administration and development are under discussion, including a proposal to establish universal compulsory primary education. There is a University in Peking and a number of colleges all over China under foreign management. In 1911, there were 545 foreigners employed in educational work.

COMMERCE.—The net trade of the open ports for the years 1914-1919 is stated as follows, in taels (in 1914, 7.5=£1, in Oct. 1920, 4.1 = £1):—

Year.	Imports.	Exports,	Total.
1914 1915 1916 1917 1918	569,241,382 484,475,719 526,406,995 549,518,774 554,893,082	256,226,629 418,861,164 481,797,366 462,931,630 485,883,031	925,468,011 873,336,883 998,204,361 1,013,450 404 1,040,776,113 1,277,000,000

The import of Indian opium is now prohibited. The foreign trade of China was shared by the

COMMUNICATIONS, - Railways, - About 6,500 miles were open in Jan. 1915, inclusive of the Manchurian lines, while s,500 miles more are projected or under construction.

Shapping. - The China Merchants Steam Navigation Co, have a fleet of 31 ships of an aggregate tennage of 60,000. Besides this, there are a large number of small vessels engaged in the coasting trade and on the Yangtse. In roza the total tonnage of vessels entered and cleared at the treaty ports was 95,325,275, an increase of a,973,445 on that of the previous year. Of these 40 per cent, were British, 22 per cent. Chinese, g per cent. German, so per cent Japanese, a per cent. French, and a per cent. Russian. In June, 2018, a vessel of 14,730 tons, constructed at the Kiangman Book and Engineering Works as Shanghal, was launched and supplied to the order of the United States Shipping Board
Telegraphs are being rapidly constructed by

the Central Government, and Peking is in com-munication overland with Europe and Tibet, the line being extended to Lhasa. In 1913 there were 27,000 miles of land lines and 51,000 miles of aerial wires.

CUSTOMS AND POSTS.—The Chinese Maritime Customs is the controlling service; this body consists of nearly z,eeo Europeans, a large pro-portion of them British subjects, all under the control of the Inspector General. By an Imperial Decree of May, 2006, the Maritime Customs Dept. was transferred from the Foreign Board to the Board of Revenue, and two Chinese Administrators-General were appointed. But the change has not materially affected the powers littlerto exercised by the Inspector-General. In addition to the collection of dues at the Troaty Ports, this service manages the lighting and navigation thereof, and keeps a small fleet of cruisers to enforce its regulations. The Chinese Post Office, formerly a branch of the Customs, was transferred in 1911 to the Ministry of Communications, and a Postmaster-General (foreign) was appointed. Already letters can be sent all over the 18 provinces at a uniform rate of 3 cents for an grammes. The muniford Chinese post offices is 8,324; 338,981,400 postal packets and 5,383,260 parcels were handled to 1924.

COLOMBIA, Republic of.

President (1918-1922), Dr. Marco Fidel Suarez, assumed office Aug. 7, 1918. Finance, Pomponio Guzman. Treasury, Jusé M. Pasos. War, Jorge Roa.

Instruction, Dr. M. A. Mendez. Agriculture, J. del Corral. Interior, L. C. Marquez. Works, E. Jaramillo.

Envoy Extraordinary and Minister Plenipo-tentiary in England, Dr. Ignacio Gutlerrez Ponce, 42 Holland Boad, Kensington, W. 14.

Secretary, Alionae Delgado. Consul-General, Joaquin Orrantia, 7 Sicilian Avenue, Southampton Row, W.C. z. Consul in Licerpool, Genaro Payan.

The Republic of Colombia lies in the extreme north-west of South America, having a coast-line on both the Atlantic and Pacific Oceans into on from the Atlantic sent racine recent it is situated between s' 40 fs. to me's N. Int. and 65' to yp' W. long., with an estimated sees of 465,665 equare miles, and a population esti-mated at g. 475,000,000 more than one-half are whites -mil helf-castes. The country is intersected by three great ranges of the Andes,

known as the Western Central, and Eastern Enowal as the western, Dentral, and Eastern Cordilleras; the accord contains the highest peaks, but the latter is the more important, as it consists of a series of vast table-kinds, cool and healthy. This temperate region is the most demand, peopled portion of the Rapublic.

The Colombian coast was visited in 1900 by Viviltands Colombian coast was visited in 1900 by Viviltands Colombian and it is seen as Supplied.

Christopher Columbus, and in 1236 a Spanish expedition under Queseda established a government of certain costal communities under the name of New Granada, which continued under Spanish rule until the revolt of the Spanish-Spanish rule until the revols of the openish-american colonies of zer-zez, In zez simon Bolicar (born 1783, died zezo), established the Republic of Colombia, consisting of the terri-tories now known as Colombia, Panama, Vene-zuela and Ecuador. In zez-zez venizuela and Ecuador withdrew from the association of provinces, and in z83z the remaining territories were formed into the Republic of New Granada. From 1853-1861 many of the Colombian Provinces declared their independence and the pineteenth century contained frequent revolutions and internal wars. In 1903 Panama second from internal wars. In 1903 Panama secoded from Colombia, and is now a separate Republic.

The Colombian forests are extensive; among the trees are malacrany, cedar, fustic, and other dye-woods and medicinal plants. The mineral productions are emeralds, gold, silver, platinum, copper, iron, lead, and coal; petroleum is available in large quantities but is unworked. The principal agricultural products are coffee, cotton, plantains, and bananas, and in some parts to-bacco, wheat and other cereals. Manufactures, for home consumption, consist of woollen and cotton stuffs. The chief exports are coffee, precious metals, hides, india-rubber, and bananas.

All religions are tolerated.

The standing army consists of about 6,000 men; the navy has been nearly abolished. Railroads are in their infancy, about 750 miles being open in 1950, with 8,680 (2007) miles of telegraph. The rate of exchange is about \$5 gold = £z (approximately).

Spanish is the language of the country.

The island of Cuba (the largest of the "West India Lialanda) lies between 24 and 35° W. long., and 29° and 23° N. lat., with a total area of 44,178 sq. miles and a population of 3,150,128 (1920).

The island of Cuba was visited by Christopher Columbias during his first worses on let observe

Columbus, during his first voyage, on October 27, 1492, and was then believed to be part of the Western mainland of India. Early in the 18th century the island was conquered by the Spaniards, to be used later as a base of operations for the conquest of Mexico and Central America, and for almost four centuries Cuba remained under a Spanish Captain-General. The slave trade was abolished early in the zeth century, and the slaves were emancipated from 1880-1886. The government of Spain was marked by a generally corrupt administration, complicated by internal unrest fomented by external influences, and the various attempts at independence met with savere military repression. The separatist and automanous agitation culminated in the closing years of the 19th century in a flerce and bloodthirsty war, and although a conciliatory movement was evinced by the Madrid authorities in 1897, the struggle was continued by the party of separation in the island. In 1898 the govern-ment of the United States put into execution a threat of interference by the despatch of the battleship Mains to Havana harbour, and in February of that year the vesses was sunk by an explosion, the cause of which appears likely to remain an unsolved mystery. On April 20, 1858, the U.S. Government demanded the evacuation of Cubs by the Spanish forces, and it which Spanish American was sed to the elandonment of the helman, which was completely lift groups. From Jan. 2, 1899, to May un, 1982, Calminian

15 5 7 7 4

. 31 11

under t'S. inflitary rule, and reforms of the widest and most far-reaching character-were instituted. On May so, 1900, an autonomous government was inaugurated with an elected President, and a legislature of two houses. The island was, however, again the prey of revolution from July to Sept., 1906, when the U.S. Government resumed control. On Jan. 18, 1909, a republican government was again inaugurated.

Of the total area of a6,000,000 acres, only about 1,000,000 acres are cultivated, 50 per cent. of these being under sugar cane and so per cent. under tobacco, sweet potatoes and bauanas. Rice, coffee, cocos and maize are also grown and tropical fruits (oranges, coco-nuts, pine apples, &c.) flourish. The chief agricultural products of the island are tobacco and sugar (estimated crop in 1920, 3.650,000 tons; actual crop, 1918-19, 3,971,594 tons), the chief product of the forests is mahogany, while cedar is also used for boxing the tobacco crop. The live stock includes about 3,000,000 cattle and 600,000 horses, the vast savannahs of Central Cubs being particularly suitable for cattle ranges.

2,516 miles of railroad are open and about 6.000 miles of telegraph line.

Spanish is the language of the island.

Estimated. 1916-17. 1917-18 Revenue . \$46,679,942 \$64,460,000 Expenditure . . .. ... 44,153,801 62,730,774 68,184,000 Note. - Both U.S. and Cuban currency are legal tender. Cuban currency being of the same fineness and value as that of the U.S. There is no Cuban paper currency.

CAPITAL, Havana (pop. estimated 2014, 625,000); other towns are Santaago (45,000), Matanzas (26,000), Chenfuegos (20,000), Cardenas (44,000), and Camaguey (29,000). In 1915 there were 32,795 immigrants.

Specially Attached, Dr. Stransky,

Part of the Austro-Hungarian Monarchy declared its independence on Oct. 18, 2018, a the Czecho-Slovak Republic, and ten days later the Ndrodni Vybor (National Council) of Caecho-Slovakia took over the administration of the independent territories. The political neighbours of the Republic are the Austrian and Hungarian Republics on the S., the German and Polish Republics on the N., the German Republic on the W., and the Ukraine Republic on the E. Within these limits are the former Austrian Provinces of Bohemia and Moravia and part of the Province of Silesia; and Northern Hungary from the Danube (at Pressburg, on the Austrian frontier) to the Carpathians (at the headwaters of the Ung River in the eastern slope of Mt. Vereezka)—a total area of about 54,456 sq. miles, with a population estimated at 10,000,000 for the Czech Provinces of Bohemia, Moravia and Silesia, and at 3,000,000 for Slovakia—a total of 23,000,000,0f whom 20,500,000 are Czecho-Slovaks and 2,500,000 Germans. The new State was recognised by Austria in 2928 and by Hungary on March to, 1919. The National Assembly, consisting of a Senate and a Chamber Assenbly, consisting or a consistence and a Chairmer of Deputies, is elected by universal adult suffrage of both sexes. The executive power is axercised by a Council of Ministers, appointed by the President. In 1939 the Democrats, Agrarians and Slovaks were in the ascendancy, Socialists as, Clericals as and Progressives 6 being in the minority of the ase members. The Constitution guarantees religious and political freedom, and the Church will be separated from the State. About 75 per cent. of the people are Roman Catholics.

The principal industries are agriculture, brewing and manufactures in Bohemia, Moravia and Silesia, and mining and manufactures in Slovakia. Wheat, potatoes, sugar beet, and hope are among the principal crops. Forests are also a source of wealth in the Republic. Dyeing and calico printing, woollens, chemicals, and porcelain ware are among the chief indus-tries, while the glass production of Bohemia is celebrated. The principal exports are timber, sugar, glassware, iron and steel manufactures, and textiles.

Ozecho-Slovakia has no direct access to the sea. but has a right of access over the Elba, and Oder to Hamburg and Stettin, for which purpose the Government proposes to canalise the Upper Elbe to over to connect it with the Oderantika Danube. If this proposal is carried out, the

country will be traversed by a waterway afford-

ing a communication from the North See and Battic, with the Banubey to the Black See. "The capital is France on the Holdan, the former capital of Bohensia, with a population estimated espitation isohennia, with a population estimated his raps at spaceos; other large towas are Brünn (Brim) in Moravia (pop. 23,000); Pilson (Pilson), the brewing center in Bohemia (pop. 63,000); Pressburg (Bratislava), where the Danube forms the S. boundary of the Republic (pop. 64,000); and Kaschan (Kosice) in Eastern Slovakia (DOD. #0.000).

#### DAMZIG

Under Article see of the Treaty of Versailles, the City of Danxig with the surrounding terratory (constituting a total area of about glo sq. miles, with a population estimated at 200,000) was declared to be a Free City, under the guarantee of the Supreme Council of the Allied Nations. There is an elected legislature of se members. The city and port of Danzig, at the mouth of the Vistula, has a considerable trade, and if the grain industry of Russia and Poland should revive, a large quantity of wheat and rye would be apported. The tennage of ships entered in spanescooded s,soo,oos tous, and of those cleared Sygnes tons.

Hiritish Administrator, Sir Reginald Tower,

Kingdom of Northern Europe, and the smallest of the Northern States, consisting of the islands of Zeeland, Frinen, Lolland, &c., the peninsula of Jutland, and the outlying island of Bornholm in the Battic. Jenunark is situated between \$4° 34′ 57° 44′ N. lat. and \$5′ 5 12° 40′ E. long., with an area of 15.042 square miles, and a population in 1916 of 2 22.000, hearly one-half of whom live exclusively by agriculture, and the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the prope

one fourth by manufactures and trade.

In 1864 Denmark was attacked by Prussia and Austria and deprived of Schleswig-Holstein (Prussia taking the whole territory after a further war with Austria in 1866). At the conclusion of peace between the Central Powers and the Allies a rore, the question of Schleswig-Holstein was subjected to a plebiseite of the inhabitants, and North Schlesnig is now part of

Denmark.

The common products are wheat, rye, oats barloy, potatoes, cattle, horses, pigs, sheep, and butter. Its manufactures are, for the most part, for home consumption. Its principal imports are coals, manufactured goods (wooliens, siks, cottons), iron, hardware, wine, fruit, tea, maize, and tons, inon, hardware, wine, fruit, tea, maize, and tons, iron, hardware, wine, fruit, tea, maize, and colonial produce. In 1912, 1,070,000 hectates were under corn crope, 197,600 ha sugar and other beets, and 789,200 ha hay crop. In July, 1918, the live stock numbered 194,900 horses, a.123,600 cattle, 479,000 sheep, and 620,800 sheep. In Crops in 1918 included 4,120,400 qrs. of the crops in 1918 included 4,120,400 qrs. of mixed corn and 766,000 qrs. of wheat. Its mixed corn and 766,000 que of wheat. Its chief exports are agricultural produce, in-cluding wheat and barley, bacon, hama, flour, butter, eggs, hides, skins, com-meal and oll-cake, horses, and cattle. There is a sea-going mercantile marine of 300 steamers, with a tonness of 341,833. There are (1917) a 463 miles of railway and 8,437 miles of telegraph line.

DEFENCE.—The Army consists of about 54.000 trained men, the vote for 1918-29 amounting to Kr. 85,000,000 (including supplementary octimates of Kr. 85,000,000). The Navy consists of a const-definer including supplementary octimates with the const-definer. of 4 const-defenses sporter bes

building), so submarines (built or building). Vote, 1918-19, Kr. 32,000,000.

EDUCATION is free and compulsory, the scheels being maintained by local taxation. Special schools are numerous, horticulture and agriculture predominating. The University is at Copenhagen.

The Republic of Santo Domingo, formerly the Spanish portion of the island of that name, is the oldest settlement of European origin in America, having been founded in 1496 by Bartolomeo Columbus, who named it Hispaniols. The island was peopled by the Spaniards with imported was peopled by the Spaniards with imported African slaves, who soon exterminated the "Indian" tribes. In 1821 an independent republic was proclaimed and the Spaniards abandoned the country. The present republic of San Domingo broke away from Hatti fu 1844 and its independence is secured under a law of Nov. 6, 1844. The Dominican Republic comprises an area of about 18, ag square miles, with an actimated promistion of nearly 200, 200. prises an area of about relegs square miles, whereas estimated population of nearly rocess. Sugar and cocoa are the most important crops, and coffee, and tobacco are grown in fair quantities, the other products being mahogany, furniture woods, cotton, wax, honey, logwood, fustic, turtle-shell, hides, and dividivi. There are about ago miles of sublice authors and telegraphic (a visible authors). nices, and dividual. There are about 150 miles of public railroad, and telegraphic (a wireless stations) and telephonic communication has been established throughout the Republic, which is connected by cable with North and South America, New York, Curaçao, and Porto Rico. The Customs are administered temporarily by officials appointed by the United States Government, under a Treaty by which the U.S. collects ment, under a Treaty by which the U.S. conscise the Customs, assists the Government to main-tain peace, and acts as intermediary between the Kepublic and its foreign creditors. Since apoy not less than 35 per cent. of the Customs Collections has been deposited in a New York Bank to pay the interest and sinking fund charges of the Foreign Loan.

On so Nov., 1928, a military Government by U.S. officers was proclaimed. All the Government departments are being administered by these officers, while the entire control of finance and police is in their hands. A native obstableary under American officers is being framed.

former.

British trade is hampered by the immittelency of direct maritime communication and by the absence of direct service with the largest ports. Which service the southweath, also white of the R. H.S.F.Co. calling at the northern ports only.

An equatorial State of South America, extend-

ing from lat. r' 38' N to 6' 3' S., and between 60' ao' and 8r' W. long. (according to the Ecuadorian geography, but there are boundary disputes with Peru), comprising an area of a75,000 English at miles.

The former Kingdom of Quite was conquered

by the Incas of Peru in the latter part of the 15th century. Early in the 16th century Pizarro's conquests led to the inclusion of the present territory of Ecuador in the Spanish Vice-Royalty of Peru. The independence of the country was achieved in a revolutionary war which culminated in the battle of Mount

Pichincha (May sa, 28cs).
The Republic of Ecuador is divided into 25 provinces and one territory. It has a population of about accesses, mostly descendants of the Spaniards, aboriginal Indians, and Mestisces. The territory of the Republic extends across the Western Andes, the highest peaks of which are Chimburaso (so, yes ft.), Iliniza (17,425 ft.), Carahnalraso (16,525 ft.), Cotocachi (16,525 ft.), and Fohincha (16,020 ft.), in the Western Cordillera; and Cotopaxi (19,425 ft.), Antisana (18,525 ft.), Cayambe (18,156 ft.), Altar (17,152 ft.), Sansay (17,454 ft.), Tungurshua (16,525 ft.), and Bincholagua (16,525 ft.) in the Eastern Cordillera. Ecuador is watered by the Upper Ameson, and by the rivers Guayaquil, Miss, Santiago, Chomes, and Busceraldes on the provinces and one territory. It has a popu-

A country situated on the guits of Finland and Bothnia which was conquered by Ennis from Sweden, and americal in sing. Besutting from the new triping in Terration in the contribution in Terration Inc. Sweden, and americal in risks. Resulting from the revolution in Russia, Finland problamed its independence in 1928, and is now an independent Republic. The area is 182, 388 square miles, with a population of about 3, 345, see in 1920, of when about 3,000,000 are Finns, 180,000 Sweden, and

s.eso Laps, leading a nomadic life in the north. Nearly all the inhabitants are Lutherans. There is a university at Helsingfors, with a gas students, of whom gas are women. The leading corps are rye, barley, oats, potatoes. Saw mills and paper manufacture provide the chief industry, and the forests are a great source of wealth, immense quantities of timber being prepared for export; dairy produce is also exported. There are a.68 niles of railroat; and a merchant floor 5.ess vessels (mostly small), of which 693 are steamers. Railway connexion with Sweden was

completed in 1929.

The country was formerly governed by the Finnish Senate, of 100 members, with a Diet of 4 estates elected by the people, but under the Constitution of Jan. 1, 1997, there is a single Chamber elected by universal suffrage of both seves, women being likewise eligible for election to the Chamber. Finland was thus the first country to concede woman suffrage and repre-

country to concede woman surrage and repre-entation, and it is noteworthy that it was cained without agitation.

The revenue in uses was estimated at 1,723,790,000 Finnish marks, and the expenditure at 1,923,790,000 Finnish marks. The public debt amounted (Aug. 2920) to 1,890,000,000 Finnish marks, including sk1,000,000 for railways, marks, including ser, oco, oco in lattrey, y5,000,000 for war expenses, 330,000,000 for the Bank of Finland, 233,000,000 for industrial development, and 75,000,000 for adjusting the 1919 budget, The imports in 1919 were valued at 2,505,500,000 Finnish marks, and the exports at \$73,000,000 Finnish marks. The Finnish marks at \$73,000,000 Finnish marks. The Finnish mark is of the same nominal value as the franc, the exchange in 1920 being about 128 marks=£1 sterling.

The Aland Archipelage, a group of some small islands at the entrance to the Gulf of Bothnia was wrested from Sweden by Russia in 1809, and was incorporated in the government district of Finland. The total area of the archipelago is about 210 square miles, with a population of about 17,000, of whom about two-thirds inhabit Aland (the largest island). Swedish claims to the archipelago are not admitted by the Finnish Government.

CAPITAL, Helsingfors. Population, 130,000. FLAG: white with blue cross.

The most westerly State of Central Europe, extending from 42° 20′ to 52° 2′ N. lat, and from 7° 42′ E. to 4° 45′ N. long. hounded on the north by the English Channel and Strafts of Dover (Pes de Calain), which separate it from England. Its circumference is estimated at about 3,000 miles, and its area (in 1914) at 207,076 square miles, divided into 87 departments, including the island of Corsica, in the Mediterranean, off the west coast of Italy. The territory ceded by the Trenty of Frankford (May 10, 187) amounted to 5,600 square miles; that regained by the Treaty of Versailles (June 28, 1919) to 5,819 square miles, making the present area of France (exclusive of Algeria) 12,289 square miles, with an estimated beautiful for the first of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the convention of the conventi Aigeria) size sig aquare miles, with an estimated population (1919) of 41,500,000. The population at the equation of seri was 35,600,000, and fin 1913 there were 25,500 births, 255,700 marriages, sit there were 25,500 births, 255,700 marriages, and the registers. It would be a marriage that the to foreigners, of whom (1900) 1,005,900 where resident there, or 25 per coult. Of the legal population; this number included 27,100 births and the lates. The lates of the legal population; this number included 27,100 births and lates. or residing in the Departm

the Seine. no per cent. of the foreign population was born in France. About as, see Frenchmen user stated to be resident in England.
GOVERNMENT.—The memorphical system of

GOVERNEERS. —The snowarchical system of government was overthrown by the French Resolution (e-62-rpsg), and the First Republic endured until the Great Napoleon (born Aug. zg., rysg, died May zz, zsz) founded the First Empire in zse4. The monarchy was restored in zse4, and also after the "Hundred Days" of Napoleon (March so-June zg., zszs), until the Second Republic of zse4, which became the Second Empire on Nov.zz, zszs. On Sept. 4, zspc, the Empiror Napoleon III. (nephew of the Great Napoleon Nov.zz, zszs. On Sept. 4, zspc, the Empiror Napoleon of the Republic is the President, elected of y years by the National Assembly of the two houses of the Legislature, the Nenate of zoo members (elected by indirect vote for y years, one-third heing renewable every z years) and the Chamber of Deputies of zoo governments.

Propuction. - The chief agricultural products are wheat, barley, rye, maize, cats, potatoes, bestroot (for the manufacture of sugar), hops, &c. Fruit trees abound, and are very productive, the principal being the office, chestant, wahut, almond, apple pear, etten, fig. plum, &c. Forestry is an important industry, the principal forests being those of the Ardennes, Complegue, Fontainobleau, and Orleans, consisting chiefly of oak, birch, pine, beech, elm, chestnut, and of oas, Bron, pine, beven, aim, chestint, and the cont-tree in the south. The vine is cultivated to a very great extent (972,778.63a gallons of wine were produced in 1972), as the names Bordeaux, Burgundy, Champagne, &c., universally testify; cider-making is absumption of the production in 1973 amounted to 662,868,908 gallons. The live stock included about 12 002,000 cattle. live stock included about 25,000,000 cattle, 27,000,000 sheep, and 7,000,000 pigs at the out-break of the War of 1914-1918. Some reparation of the destruction of the War is to be made under Annex IV. of the Treaty of Versaules, whereby Germany undertakes to deliver to the French Government specified numbers of bulls and milch cows, stallions, fillies and marcs, sams and sheep, and goats. The mineral resources include, onal (1913, 40,394,277 metric tons), pig iron (4,339,134 metric tons), copper, lead, silver, antimony, and sait. Under Article 30 of the Treaty of I erwalles, the coalfields of the Saar Burin are ceded to France for 15 years, at the end of which time the inhabitants are to decide by a plableage whether they will remain French, return to Germany, or become a self-governing community. The coalfields abut on Lorraine, and have an area of any square miles, with a a population of 6ee, coo, and they include the towns of Saarbrick (6e, coo), Saarbuis (16, coo), and Mersig (2e, coo), ou the River Saar. It is estimated that the coalfields will yield so, coo, coo twas of high-grade coal, and in 1913 the various establishments in the coded area produced s. 395,000 tons of east fron and s.600,000 tons of steel. Under Annex V. of the Treaty, Germany also undertakes to deliver to France y,common metric torm of coal annually for no years, and to make good any deficiency due to War causes in the production of coal in the de-partments of Nord and Pas de Calsis. The most important manufactures are of metals, watches, jewellery, cabinet-week, enving petiery, gittes.

chemicals, dyeing, paper - making, woollena, carpets, lines, silk, and lace. Gless manufacture and pottery are also important, and the sardine flaheries and the culture of oysters are a source of wealth.

DEFERCE. The National Army of France consists of the Metropolitan Army, the Colonial Army, the Colonial Army, the Gendarmeric, and Republican Guard, and of the partly native armies of Algeria, Morocco, and Tunis. These forces had a total strength on a peace footing (in 1914) of 623-723 all ranks. In the War of 1914-1918 over 20 per cent of the French people were mobilised, and 9,717,000 all ranks passed into the Armies of Fiance (exclusive of troops from Algeria, Tunis, and Morocco). Of this total over 1,800,000 were returned as killed or missing. By law of 1919, the French Army will consist in future of 250,000 all ranks on a peace footing, and of 1,300,000 on a war footing, with a reserve (including Territorials) of 2,000,000 all ranks. The French Nary was manned in 1914 by 64,000 officers and other ranks, and consisted in 1919 of 7 Dreadnought and 13 Fre-Dreadnought sattle-ships, 19 armoured cruisers, 25 protected cruisers, 80 destroyers, 193 torpedo boats, and 100 to 120 submarines.

EDUCATION.—The educational system is highly developed. Central Administration comprises (a) Ministry of Public Instruction ; (b) Superior Educational Council, charged with the actual administration , (r) Consultative Committee (advisory); (d) Educational Bureaux and Inspecting Staffs whose heads report direct to the Minister. Local Administration comprises (a) Territorial Academies, with inspecting staits for all grades, and (b) Departmental Councils, presided over by the prefet, charged especially with primary educa-By the Law of July, 1904, all compregationist institutions are to be suppressed within to years, and many were at once closed, some re-opening under lay management (i.) Primary Secular, comp. and free Age 6-13. Schools include (a) infants; (b) lower primary; (c) higher do. Supplementary courses, and courses for adults. Lower and higher primary cortificates granted. Numerous private courses are aided from local funds. Schools are for boys, for girls, or mixed. (ii.) Secondary: State lycées, communal colleges, and many private establishments, 7-yrs, course, either (a) purely classical; (b) purely modern, (c) Latin and sciences; or (a) Latin and modern languages. Degree of Bachelor conferred on completion. For females, a similar organisation, course 5-6 yrs. Sevres school and the Sorbonne Association well-known. (iii.) Special Schools Association well-known. (iii.) Special Schools are very numerous, many public institutions being dependent on ministries other than that of Public Instruction. (iv) Universities (State universities alone grant degrees, but numerous private faculties and private institutions further higher education): Alx, Abjers, Angers, Bordeaux, Caen, Clermont, Dijon, Granoble, Lille, Lyon, Marseilles, Montauban, Montpeller, Mancy, Montauban, Montpeller, Mancy, Dalates Bannes and Toplones.

Marsellice, Montauban, Montpeller, Mancy, Martelles, Montauban, Montpeller, Mancy, Nautes, Paris, Politers Rennes, and Toulouse. Connunications.—The principal rivers of France are the Scine, Loire, Caronne, and Rhône. The system of railroads in France is very extensive; they are almost entirely concide, and become State property after the expiration of the concession. The length of lines of general interest, inclusive, of local lines, open for traffic on 32 December, 320 lines, open for traffic on 32 December, 320 lines, open for traffic on 32 December, 320 miles, the total receipts from passenger and goods traffic, 40.0, heing: 440,445,840.

The length of telegraph wires is sgr, see miles, and of telephone lines reg, rgo miles. At the rst and of telephone lines 107,150 miles. of January, sees, the mercantile marine, com-prising boats of a tons and upwards, amounted to 17,670, vessels of 1,518,518 net tons (of which 13,823 were sailing ships, representing 614,004 net tons). The sums voted by Parliament for construction and navigation Bounties to Shipping and to Deep Sea Fisheries in reas amounted to £1,530,000, and £1,106,732 for Postal and Cable Service Subventions.

Shipping -- The French mercantile marine consisted in xgx6 of x,ox6 steam vessels above xoo tons, with a total tonnage of 1,909,600 tons, and of 523 sailing vessels above 100 tons, total tonnage 376,129 tons. During the year 1923 the total number of French and foreign vessels entering French ports amounted to 27,409, representing a tonusage of 31,308,807 tons, of which 2,581,374 tons were French, while the total clearings amounted to 28,440 ships of a tonusage of 31,472,085 tons, of which 2,752,572 tons were French. The chief ports are Marsellies, Rouen, the total clear to the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state Bordeaux, Le Havre, Calais, Boulogne, Dunkirk, and Cherbourg A bill is to be introduced into the Chamber for the canalisation of the Rhone, which will make the river navigable for x, 200 ton vessels from the sea to Switzerland, and will also provide electric power and irrigation to the surrounding departments.

COMMERCE -- The principal imports are wool. cotton, coal, silk, oleaginous fruits and seeds, machinery, raw skins, cereals, timber, caout-choue, copper, petroleum oils, coffee, and wines The principal exports are cotton tissues, silk tissues, wool, woollen tissues, wines, smallwares, automobiles, &c., silks, raw skins, millinery and artificial flowers, dressed skins, tools and metal goods, machinery, pig iron, butter, table fruits. refined sugar, brandy and liqueurs, fish, and

than (1900). Alease-Luraine, formerty a part

of the Holy Roman Empire, was orded to France in side at the Peace of Westphalia, and was could to Germany by the Fresty of Freehort (May se, 1872), after the Franco-Prumian Wer. At the cluse of the War, rgaq-rgal, the Provinces were regained by France under the Treaty of Verwilles (June all, 1939). They embrace the fortile plain between the Ehine and the Vonges, and stretch beyond these mountains as far as Luxemburg. Wine, tobacco, hops, iron, and coal are among the leading productions, and the cotton industry is most flourishing. The area is 5,605 square miles; the population in Dec., rere, was z.874.0z4, of whom 965.6ag were males and 908.359 females; while z.428.333 were (atholics, 448.234 Protestants, and 90.483 Jews. Principal towns, Strassburg (pop. z98.82z), Mulhauseu, and Metz.

Algeria.—The three departments of Algeria-Algiers, Oran, and Constantine -- form an integral part of France, under a Governor-General, assisted by a Consultative Council These departments lie between 4° 36′ W. to 6° 16′ E longitude, 37° 6′ N. to an undetermined S. limit, about 30° N., covering an area estimated in 1906 at about 1,119,416 square miles, with a population (1911) of 5.563.888, of whom 752.043 were Europeans and 4.740.526 natives. The revenue in peans and 4.740.55 natives. The revenue in 1917 was estimated at £5,283,653, and the expenditure at £5,213,226. The bulk of the trade is with France, the exports to France amounting in 1917 to 81'3 per cent, and the imports from France to 678 per cent of the total; the exports to the ! K in 1917 were valued at £3,300,000, and the imports from the ! K at £3,20,000. The exports consist mainly of wine, wheat and other cereals, sheep and oxen, skins, fruits, zinc and iron ores, olive oil, phosphates (soc,oco metric tons in sugs), cork wood, esparto grass, manufactured tobacco, and vegetables. The principal imports from the U.K. were coal and patent fuel, machinery, cotton oil, cotton tissues, tin plates, clothing, and prepared skins. Iron, copper, quicksilver, zinc, and lead mines are being workett. In 1917 there were 1,172 miles of railroad open for traffic; and in 1917 the number of ships engaged in foreign trade entering and clearing Algerian ports was 4,075 of a net tonnage of 4,397,365 tons The principal town is Algiers, the capital (population, 1911, 172,397), a most important coaling station and much frequented as a health resort; other large towns are Oran, Constantine, Bone, and Tlemuce. Governor-General, M Abel.

In ASIA. - French India includes Pondicherry, on the Coromandel coast; Chandernagore, on the Hooghly; Karikal, in the Cauvery delta; Yanaon, in the Godavery delta; and Mahé, on the Malabar coast—the total area being see aquare miles with an estimated population of 277,700. Prench Indo-China comprises the possession of Cochin-China and the four protectorates of Cambodis, Annam, Tonkin, and Leos. In 1898 9 the port of Kwang-Chow-Wan. was also acquired on lease from China. The capital is Hanoi, in Tonkin, and the total area is 309,979 square miles, with a population (1922) estimated at 16,500,000.

In Asia Minon.—The French mandatory sphere of Syria, Cilicia and Lebanon has a total

sphere of Syria, Olicia and Lebanon has a total area of about 150,000 square miles, with an estimated population of 4,500,000 (see also pp. 800-1). a

In APRICA.—Alperia (see above) is an integral part of France. Mercoso, the largest of the Barbary States, situate in the N.W. of Africa, between \$g^{-}\$—\$g^{-}\$ N. lata and \$r^{-}\$—\$g^{-}\$ V. long., with a total area of about see,000 square miles, and an estimated population of about 6 millions. In ages a Franco-Spanish agreement fixed the boundaries between the French and Spanish zones, and the principal part of Marcoco now forms a French protectorate, while Yangier to be internationalised. Among the chief products of the country are wheet, barley, make, heater, mean, oil, especies, butter saids (week.) beaus, pens, oil, caparte, hemby eggs and skins; smong fruits, th

pomegranate, lemon, oliver erange, and date are common. Staps ribade best taken to improve agriculture, which had previously been much neglected. Morocco is said to be rich in mineral treasures: authnouy, iron, coal, copper, lead, tim—she last three in considerable quantities. Gold and silver also are found, and wool is plentiful. There are no rallways, except the narrow gauge strategic lines of the military service. All the principal towns are now connected by wire and wireless telegraph systems, and from Taugier there are sulmarine cables to Europe and Algeria. The submarine cables to Europe and Aigeria. The trade is principally with France (and Algeria), U.K. (and Maits), Germany, and Spain. Fez, the capital, has a population of about zeo,coe; other towns are Morocco, or Marrakesh (60,000). Casablanca (60,000), Moquines (56,000), Rabat (50,000), Sallee (50,000), Taugler (45,000), Tetuan (30,000), Mazagari (30,000) and Saffi (40,000), Sultan of Moreove, Moulai Yunef, acceded 1982.

Tunus has been a French protectorate since 1881. It lies between Algeria and Tripoli, and extends southwards to the Sahara, with a total area of about 45,000 sq. miles and an estimated population of s.coc.coc, of whom about 60c.coc are Berbers and soc.coc Arabs. The valleys of the northern region support large flocks and herds, and contain rich agricultural areas, in which wheat, barley, and oats are grown. The vine and olive are extensively cultivated. principal minerals are coal, copper, lead, zinc and iron, and phosphates and marble are also worked. The chief exports are phosphates, olive oil, wheat, esparto grass, barley, beans, blankets, sponges, and dates; the chief imports are textiles and other manufactures, iron, steel, machinery and provisions. Eighty per cent. of the trade is with France and Aigeria. Tunis, the capital, has a population of 30,000; other towns are Max (84,000), Bizerts (20,000), Kairwan (20,000), Bizerts (20,000), and Monastr (6,000). French West Africa extends from Mauritania to Dalomey, and has a total area of a commence of the second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second seco area of 1,509,733 square mites, and a population of 21,344,076. It consists of Senegal (74,000 aq. mites, pop. 1,326,300), applied to the consists of Senegal (74,000 aq. mites, pop. 1,326,300), applied to the consists of Senegal Nujer (304,000 aq. mites), and the Nujer Mittary Terratory (333,000 aq. mites), which have a total population of about 6,355,300; French Guinea (92,600 sq. miles, pop. 1,737,330); Ivory Coast (126,100 sq. miles, pop. 1,216,320); and Icory Const (185, 180 84, 181188, pop. 1, 185, 180); and Dahomey (28, 000 84, 180); adjoining Dahomey is the French Sphere of the former German colony of Togoland (23, 480 84, 18118, pop. 800, 280); while the interiand of these colonies forms the French Sahara, which has an estimated area of 180, 180, 180, 18118, and a population of about 180, 18118, miles and a population of about 180, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 18118, 1811 513,000 sq. miles., pop. 9,000,000) and of the French Sphere in the former German territory French Sphere in the former German territory of Cameroon 169,000 set, miles, pop. 2,792,000). French East Africa consists of the Somai Geat (45,300 sq. ms., pop. 200,000) and of the large island of Madagascar (205,200 sq. ms., pop. 2,23,300) with its dependencies (Nossi Bé, Bainte Marie, Réunion, and the Mayotts-Conscrolalands, and St. Paul, Amsterdam, and Exquelen Islands). Agriculture and cattle raising are the principal initiaties; the missents include gold, aliver, fron, copper, lead, and sine. The chief exports are grid, cattle, bark, manion (for arrowrot), beans, kides, sining there, iros, timber and rabber; the distorts are

cottond, inetal ministratures, wines stid spirita, costs, ofottings, imm and content. The capital, Astanciaselve, has a population of 25,000; other towns are Tainatisve (the third port), Majunga, Diego-fusares, Manunjar, Tuicar, Andevoranto and Vohemar, Off the south-east coast are the unimarited injunds of 81. Faul, Kerguelen and Amsterdam. There is now direct communication screek Presch and British territory in Africa, with posta on the Atlanta and Indian Africa, with posts on the Atlantic and Indian

In AMERICA.—Off the south-east coast of Newfoundland are two small groups of islands, of which the largest are St. Pierre and Miquelon. In the West Indies, Martinique and Gusdaloupe with Hame Terre, Marie Galante, Ile des Saintes, Petite Terre, St. Bartholomew, and St. Martin); and in South America, Cayenne or French Guiana. The total area of French possessions North and South America is 35,300 square

miles, with a population of 458,850.

In AUSTRALASIA.—New Caledonia (7,200 sq. ms., pop. go.goo) is a large island with many dependencies; and the Society Islands (Tahiti, &c.) and other islands have a total area in the Pacific Ocean of \$,228 square miles, with a population estimated at \$1,100. The New Hebrides are under joint Franco-British administration.

Consul-Gen. in London, (not yet appointed).
At the outbreak of war, Aug., 1914, "Germany" was a Confedente League, bearing the name "German Empire," under the hereditary presidency of the King of Peussia, holding the title of "German Empire," The German Empire had a total area; in Encope of active sa, miles, and consisted of the following as Estate & Peussia Confedence, Lancachung and Confedence, Lancachung and Confedence, Lancachung and Confedence, Lancachung and Confedence, Lancachung and Confedence, Lancachung and Confedence, Lancachung and Confedence, Lancachung and Confedence, Lancachung and Confedence, Lancachung and Confedence, Confedence, Canachanter, Lancachung and Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Confedence, Co

Württembeitg; Ruden; Heane; Mecklenburg-Schwerin; Sane-Weimar; Mecklenburg-Strelliz; Oldenburg; Bruswick; Saxe-Meiningen; Saxe-Altenburg; Saxe-Oberrg-Gotha; Anhalt; Schwarzburg; Souldershausen; Schwarzburg-Rudobtadt; Waldeck; Reuss (elder line); Rouss (younger line); Schaumburg-Lippe; Lippe-Det-mold; Reichsland (Alasco-Lorraine); Mileck'; motol; Reforsiand (Atance-Lorratine); anthem; Bremen; Hamburg; with a custom population (1920) of 64,982,993, of whom 32,021,957 were males and 32,572,495 females. By the Tweaty of Vernatiles the "Reichsland" of Eisass-Lothringen and the Sear ough basin

(temporarity) were ceded to France; parts of Posen and West Prussia to the newly-formed Posen and Republic of Poland; North Schleswig to Denmark; and Moresnet and Malmedy to Belgium. Plebisoites held in June 1920 in parts of East and West Prussia yielded majorities for Germany

A plebisoite to decide the fate of Upper Silesia will be held under the Peace treaty.

The Colonial possessions of the German Empire extended over 1.035,085 sq. miles in Africa, 96,200 sq. miles in the Pacific, and a,943 sq. miles in Asia—a total of 1,734,335 sq. miles, with a population estimated in 12974 at 15,000,000. By the Treaty of Versailles Germany renounced her overseas possessious, with all rights and titles therein, and the delegates to the International Council at Paris allocated Togoland and Kamerun to Great Britain and France; German East Africa to Great Britain; German S.W. Africa to the Union of South Africa; the German Pacific possessions N. of the Equator to Japan; and those S. of the Equator to Australia and New Zealand.

On Nov. 9, 1918, the German Emperor abdicated, and the Government of the country was taken over by the Council of the People's Commissioners in Berlin On Nov. 11, 1918. Germany was granted an armistice, and on June 28, 1919, peace was signed at Versailles. In Jan. 1919, elections were held to a National Assembly on the basis of universal adult suffrage (male and female), and on Yeb. 11, 1919, the first President of the German Versamming was first President of the German Versamming was elected at Weimar Infer the new Constitution of August zz 1979, the federal legislature consists of a Reichstag representing the whole nation and elected by popular suffrage (male and female), with proportional representation, and a Reichstart representing the separate Statea. The people possess the right of initiative and the referendum. Bills dealing with accomplical constitues or notice issues with economical questions or social issues arising thereout must first be submitted to the new advisory Economical Council (Reichzwirtechaftmat).

A counter-revolution in the Junker (aristocratic) interest was temporarily successful in March, 1920, and the President and Cabinet abandoned the capital; but in a few days the revolutionaries capitulated and the Republican administration resumed direction and control.

The religious confessions of the people of the former German Empire were divided in

PRODUCTON AND TRAINTRY Germany, up to the consequences of the way, was to the consequences of the way, was becoming more and more a manufacturing country. In 1997, 1945 per cent, by industry and mining, 113 per cent, by industry and mining, 113 per cent, by industry and mining, 123 per cent, by trade and communications. Of the total arcs in 1997, 745,8140 arcs were under califuration, and 24,878,142 acres were woods and forests. The Live Stock (Oct. 1, 1919) included 2,464,000 horses, 15,560,000 cattle, and 11,000,000 pigs; large numbers of these animals were ceded to France and Belgium (as part of the reparation) under the Treaty of Versailles. Germany supported about nine-tenths of her population by her own produce in 1924. The mineral produce was valued in 1924. The mineral produce was valued in 1924. The mineral produce was valued in 1924. The mineral produce was valued in 1924. The mineral produce was valued in 1924. The mineral produce was valued in 1924. The mineral produce, and included 199, 199, 190 for one; potath, orc. quickailver-ore, and incomeso-ore, obsittore, undiatum-ore, wolfram-ore, pyrifes, vitriolio-ore, and alum-ore are also worked. Credid, Elberteld-Berman, Muhihausen, Chemnitz, Augsburg, and the provinces of Westphalia and the provinces of Westphalia are the great centres of the textile industries. By laws of 1924 and 1920, all coal, heavy irou and steel, potash and coal-tar producing concerns were compulsorily fused into All German Syndicates, governed by assemblies representing Produces, trailers and Consumers, with equal 1920 control for Employers and

OLD AGE AND INFIRMITY IMBURANCE .- The German scheme of social legislation gives all subordinate bread-winners in Germany a legal right to pocuniary subvention when unfitted for work through sickness, accident, premature infirmity, or old age. Insurance is compulsory. This National Insurance is based on mutual insurance and self-administration. The Infirmity Insurance Act came into force Jan. 2, 2000. The insured in-clude all persons working for wages or salary as workpeople, artisans, journeymen, apprentices, domestic servants, laundresses, dressmakers, domestic servanta, laundressee, dressmakera, sempatresses, housekeepera, charwomen; over-seers, forcamen, engineers, assistants, clerks and apprenthess in merchants' offices (excepting assistants and apprentices in chemists' slope), schoolmasters, schoolmistressee, tutors and governesses-in so far as the incomes do not exceed £200—including foreigners working in Germany under these categories. Pensions for premature infirmity are given to insured persons when unfit for work; old age pensions to all insured persons on attaining the age of 70, though still capable of work. A comprehensive project of reform of the State insurance le intion became law in sgs. The new law codified previous legislation, established new Insurance Authorities, reduced working-class influence in the Accident Insurance organisations, provided pensions for widows and orphans, and made other changes of importance. Another Bill extending insurance benefits to private officials, clerical employes and others above the class of Another Bill otherical employee and others above the class or manual workers, became law in 1931. A Bill establishing Federal Unemployment Insurance for industrial workers (not farm labourers or demostic servants), classing actors and orchestra musiciate, is before the Reschates. Dansition.—In the War of 1988, the Warnelle hand, and the War of 1988, the

military machine during the Gamman Offensive moreoment of July, seek, when see divisions were available on the Western Brond. At the date of the Armintics (Nov. 22, 2925) only all divisions were available, and the reserves had devincing from a proportion of over one half of the tracognition to that of one-elevanth only, while the six divisions were each barely 6,000 strong, all raits. By the grant of an armistice the German armine accounter with the Allied y the grant of an armistice the German armic caped further encounters with the Allied Armles, the reserves of which were increasing in numbers every day, which their strategical position was becoming every day more satisfactory to Marshal Foob, their generalisation. By Article see of the Treaty of Versellies the German Military Forces, as from March 21, 2220, must not comprise mere than seven divisions of infanture and three divisions of carriers. infantry and three divisions of cavalry, a total force of rec.coc all ranks. By Article six of the Treaty, the German Neval Force must not exceed 6 battle-ships of the Deutschland or Lothringen class, 6 light cruisers, rs destroyers. and za torpedo hoats. No submarine vessels are to be included in the naval forces, and all war vessels in excess of the above numbers are to be broken up or devoted to commercial purposes. Under the terms of the Armistice of Nov. 11, 1918, the German High Sea Fleet surrendered to the Allies (Nov. sz. 2928) and was interned in Scapa Flow, manned by German naval crews. It was souttled by its crews in Scaps Flow, while in custody, on June 21, 1919. In consequence of this breach of the Armistice agreement by the German crews the Allies (Nov. 20, 2929) called upon the government to surrender 5 light cruisers, and certain floating docks, cranes, and dredgers, in addition to the previous naval surrenders. The interned vessels Seydlitz, Santa Fé and Yorck are to be disarmed and treated as merchant ships. By Article 108 of the Treaty the armed forces of Germany must not include any military or naval Air Forces, and no dirigible balloons, aeroplanes, seaplanes or flying boats.

COMMUNICATIONS.—The total length of the Railroads in 1973 was 37,882 miles, of which about 92 per cent. belonged to the different States. On April 2, 1920, all the State Railways passed to the Federal Government. There are 1,200 miles of inland canals and 1,500 miles of ship canals. The number of registered automobiles and motor cycles (January 1, 1913) was 7,750. Length of Telegraph Lines 25,600 kilometres (length of wires, 1,507,200 kilometres); telegrams handed in, 49,533,000; post offices, 14,425; telegraph offices, 20,032 wireless stations, 24; telephone call-stations, 37,970; letters delivered, 5,943,2000; cash on delivery orders, £650,100,000; money orders, £6,55,000,000; telegrams despatched, 49,533,000; telegrams received, 49,543,000. The number of employes in the service of posts, telegraphs, and telephones was 200,352. The State postal services were taken over by the Federal Government in 250. In addition to some 6,000 miles of navigable rivers there are over 1,500 miles of canals and 1,500 miles of ship canals. At the outbreak of the War of 252,750 miles of canals and 1,500 miles of ship canals. At the outbreak of the War of 252,750 time Mercandile Marine consisted of 2,250 see 1900 gross register), and of 2,250 sailing vessels (425 feb. 1500 see 1500 miles of 2,500 spices and 1,500 miles of 2,500 spices and 250 spices and 1,500 miles of 3,500 spices and 250 spices and 1,500 miles of 3,500 spices and 250 spices and 1,500 miles of 3,500 spices and 250 spices and 1,500 miles of 3,500 spices and 1,500 miles of 3,500 spices and 1,500 miles of 3,500 spices and 1,500 miles of 3,500 spices and 250 spices and 1,500 miles of 3,500 spices and 1,500 miles of 3,500 spices and 1,500 miles of 3,500 spices and 1,500 miles of 3,500 spices and 1,500 miles of 3,500 spices and 1,500 miles of 3,500 spices and 1,500 miles of 3,500 spices and 1,500 miles of 3,500 spices and 1,500 miles of 3,500 spices and 1,500 miles of 3,500 spices and 1,500 miles of 3,500 spices and 1,500 miles of 3,500 spices and 1,500 miles of 3,500

in 1928 at German yards for German firms, 629 sea-going ships of 28,000 tons grees, and at Getchish yards for foreign firms, 124 sea-going ships of sixest tons grees. Eleven new shipyards we're chiallished during the War. Some of the larger ships were interned in foreign harbours the ward of the larger ships were interned in foreign harbours that the war statement the war statement that was a second to the same of the larger ships were interned in foreign harbours during the War, and by the Treaty of Versailles reparation is to be made for the lesses inflicted on the Allies by the surrender of merchant ships. The chief ports of Germany are Hamburg, on the Elbe; Bromen, on the Weser; Stettin, on the Oder; Königsberg, on the Pregel; Kiel, on the Baltic (connected with the Elbe by the Kaiser-Wilhelm Canal); and Lübeck, on the Baltic. Under the Peace Treaty Danzig became Free State, subject in its foreign affairs to the Polish Republic.

FINANCE.—Under Articles 248-252 of the Treaty of Verscilles the German Government undertook to pay the cost of the Armies of Occupation from Nov. xx, 2528, until they shall be withdrawn, the occupied area extending to the Rhine (with "bridgeheads" on the right bank), from Elten, on the Netherland's frontier, in the north, to the junction of the German-Lorraine frontiers, in the south. The amount of the indemnity due by Germany under the Treaty has not yet been fixed.

GOVERNMENT (April z. zgao). President and Minister of Agriculture, Herr Brauo.

Interior, Herr Severing. Finance, Herr Lüdemann.

the excess of births over deaths fell from mis, not

Prussis possesses a large timber of navigable rivers intersecting the country—viz.; the Propel Oder, Eibe, Weser, and Ehise. The coasts of the Baltic and North Seas form a number of guifs and bays. The principal mountains are the Harz and the Giant Mountains, the latter reaching an altitude of 5, agg feet. The forests are extensive, occupying an area of nearly so, 435, 441 acres, chiefly consisting of fir. Minerals consist of coal, iron, copper, lead, potash, alum, nitre, zinc. cobalt, sulphur, nickel, arsenic, baryta, amber, agate, jasper, onyx, &c., and, to a small extent, silver Salt (from the brine springs of Prussian Savony) is abundant. Metallic ores coal, sait, precious stones belong partially, and amber totally, to the Crown. Agriculture and the rearing of cattle are the industries employing the largest number of persons, but Prussia has long ceased to be a mainly agricultural State. Wheat, rye, oats, barley, peas, millet, rape-seed, maize, linseed, flax, hemp, tobacco, sugar-beet, hops, &c., are extensively cultivated. Prussia's manufactures comprise practically all branches. The cotton works are extensive, and there are numerous manufactories of silk, woollen, mixed cotton and linen fabrics, including shawls, carpets, &c., and woollons, with leather, earthenware, glass, paper, and tobacco manufactures, as well as metallurgical works of great importance and large output. Brewing is a business of great importance.

Revenue (Estimate) zozo-zz ...... 5,600,000,000 Floating ... 14,600,0

The whole Funded and Floating Debts of Pruseis will be taken over by the Republic under the arrangement for transfer of the Prussian

State Railways.

CAPITAL, Berlin, on the Spree. Population of suburban (rere), 2,070,695 In 2920, by fusion of suburban municipalities and of some adjacent rural communes, was created Great Berlin with a

population of 4,000,000.
There are 30 towns with a population exceeding 100,000,00 which the largest, in addition to the Capital, are Cologne, on the Rhine (216,167), Brealau, on the Oder (gr. 202), Frankfort, on the Main (424,598), Disseldorf, on the Rhine (357,702), Charlottenburg, W. of Berlin (352,282), hanover, on the Leine (352,384), Essen, on the Ruhr (352,582), and Magdeburg, on the Ethe (752,382). The former Kingdom of Prussia comprises the larger portion of Germany, with a total area in 1918 of 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919, 1919

Many fimportant manufactures are carried on.
The brewing of beer is carried to great perfection.
The brewing of beer is carried to great perfection. The chief imports are sugar, coffee, woollens, siks, ptnffs, drugs, hemp, octoon, tobacco, and fax; the chief exports are timber, grain, wine,
fax ; the chief exports are timber, grain, wine,
hope, beer, leather, glass, lewellery, &c.

CAPTAL, Munich, on the Iser. Population 1910, 595,457. Other large towns are Nürnberg, N.W. of Munich (332,651), and Augsburg, on the Wettach-Lech (202,202). British Consul (Munich), Robert Townshend

Smallbones, M.B.E.

#### BAXONY,

The former Kingdom of Saxony has an area of 3,395 English square miles, with a population (1920) of 4,505,501. More than one-half of the surface is arable, and has always been in a high state of cultivation, producing the insulal cereals and leguminous plants, with rape, buckwheat, flax, and fruits. The forests supply timber of excellent quality; minerals are rich and abundant (coal, sliver, tin, bianuth, colait, iron, sinc, lead, nickel, arsenic, &c., besides marble, porcelain, earth, and various crus); special manufactures of Saxony are:—Machinery, cottous, worsted yarns, soft wool tissues, carriages, furs, clothing, juto, furniture stuffs, hosiery, gloves, and other knitted goods, laces, embroideries, curtains, paper, wood and straw pulp, bottle glass, musical instruments, chocolates, sweets, cigars, and Meissen porcelain. The imports are chiefly corn, wine, salt, cutton, silk, flax, hemp, wool, coffee, tea, &c. Its chief towns are Dreaden (pop. 52,507), Lepnzig (pop. 52,932), the great book-market, with, next to those of Bertin and Munich, the most frequented University of German (having 5,985 matriculated students in 1913-12); Plauen (pop. 192,329); Zwiekau (pop. 73,548), and Chemnitz (pop. 29,507), the Manchester of Saxony.

CAPITAL, Dresden. Pop. (1910), 551,697.

# ' württemberg,

The former Kingdom of Württemberg has an area of 7,334 English square miles, and a population (in 1920) of 2,475,724, of whom 30 per cent. are Roman Catholics. It possesses rich entitivated fields, orchards, gardens, and hills covered with vines; the forest, grain, and pasture-lastif being nearly equally distributed throughout. Spelt, wheat, rye, oats, barley, hemp, hops, polatoes, beans, maize, and turnips are the principal agricultural products. The minerals, consisting chiefly of salt, iron, granife, limestone, incistone, firectary, dec., abound in the kingdom; subparal aprincipal are also insucrous. The principal rivers are the Fockar and the Danibe. The mineral actual products and steel goods, particles of the principal firectary, captured work, de. There are also insucrous and steel goods, public, clocks, pottery, cabinet work, de. There are also insucrous are steel goods, public, clocks, pottery, cabinet work, de. There are also insured the principal exports are grain, cattled when a steel goods, public, clocks, pottery, cabinet work, de. There are also insured and steel goods, public, clocks, pottery, cabinet work, de.

THE MINISTRY, (Nov. so, 1980). Prime Minister and Foreign Affairs, M. Rallis. Interior, M. Tsaldaris. Marine, M J. Rullis. Finance, M Kalogeropoulos. War, M. Gounaris. Education, M. Zaimis.

Envoy Extraordinary and Minister Plenipoten-tiary in London, M. D. Caclamanos, 51, Upper Brook St , W. z

zet Secretary, M S. Polychroniadia. Cons Gen., Sir John Stavridis, 40, Old Broad St.,

A maritime Kingdom in the south-east of Europe, bounded on the N. by Albania, Yugo-Slavia and Bulgaria, on the S. and W. by the Ionian Sea, and on the E. by the Aegean, Sea of Marmora and Black Sea, with an estimated area of 56,000 sq. miles and an estimated population 01 6,000,000.

Government.-Greece became a kingdom in 1830, after a successful insurrection against the Turkish government, to which the coun ry had been subjected since the 15th century. legislature consists of a Chamber of Deputies (or houle) elected for 4 years by universal manhood suffrage, and of a Council of State. Members of the legislature are paid a,oos drackers annually. King Alexander, who accoded to the throne on the abdication of his father (June 12, 2917), died from the effects of a monkey-bite, Oct. sg, re The crown was offered to his younger brother Paul, a Regency being meanwhile proclamed under Admiral Coundouriotis. The November elections drove the Venizelists from office, and the Regent, having admitted M. Rallis to the

Promisriship, was called upon to resign. He was succeeded by Queen Olga.

Prior to the balkan Ware of xgzs-12 the area was less than ageos ag. miles, the addition of portions of Macedonia and Epirus, Crete(ages ag. miles, nop. 335,323, and certain Aspess. Islands increasing the area to 43,388 sq. miles. During the War of 1924 nord Greece eventually declared for the Allies against the Central Fowers, and for the Allies against the Central Fowars, and her territories were increased by the occupation of Thruce (including the monastic republic of Mount Ather), and the Islands of Justore and Trandes. Under the Treaty of Serne the Dedecanese (as islands) are surrendered by Turkey, and these are to be handed over to Greece by Italy with the exception of Rhodes, for which a special arrangement is used. Greece also receives under the Treaty a mandate for the occupation and administration of the foward district of Sugress, which remain, however, under Turkish community. In addition, Greece

will receive an extension of frontier in Epurus, the limits of which are not yet fixed. The ounstry is thus composed of a continental portion (the southern part of the halkan Peninsula), of islands in the Ægean, Mediterranean, and Ionian Seas, and of a portion of the mainland of Asia Minor. The surface is nearly all mountainous; the coasts are elevated, irregular, and deeply indented.

Production. — Agriculture is the principal industry and employs more than half the population. The most important of the fruit trees are the olive, the vine, orange, lemon, fig, almond, citron, pomegranate, and currant-vine. The principal minerals are silver, lead, zinc, emery, copper, magnesium, sulphur, salt, and marble. The chief manufactures are smelting, textiles, and shipbuilding The imports are cotton and other manufactures, corn, timber, cattle, hides, sugar, salt fish, and coal. The exports consist of currants, figs, olive oil, wine, cognac, tobacco, hides, lead, iron ore, magnesite, iron pyrites, chrome orc, emery, marble, and sponges

Defence .- Service in the Army is universal and compulsors between the ages of as and 57 Both the land and sea forces were reorganised during the War of xg14-xg18, and about 150.000 all ranks fought with the Allied Armes. The havy consisted (July, 1919) of 6 fronclads, modern cruiser, 14 destroyers, 6 torpedo-boats, and a submarines.

Education is free and compulsory, maintained by local taxation supplemented by State grants. Secondary education is somewhat backward, particularly in the country districts. versity at Athens is of some repute.

Communications.—There were (1919) 1,400 miles f railroad open for traffic. There is a ship of railroad open for traffic. canal cutting through the Isthmus of Corinth : for ships up to 1,500 tons. The post offices (in Old Greece) number 1,150, dealing with 26,000,000 postal packets, telegraphs, 4,92 miles. The necroastile marine consists of 210 satiling vessels above zee tons capacity, and ag8 steamers (449, 184 tons). The principal harhours are the Piraus (port of Athens), Syra, Patras, Salonica, Volo, Corfu, Kalamata, Laurium, Cavalla, Canea (Crete), and Smyrna (Asia Minor)

# HAITI, Republic of.

Charge d'Affaires, Abel Théard, 76 Victoria Street, S. W. z. Comand, Maurice Erdmann, 32 Fenchurch Street,

The Republic of Haiti is the western or French portion of the island of San Domingo, which, next to Cuba, is the largest of the" West India

lulanda.

The island was visited on Dec. 6, 1492, by Christopher Columbus, who named it Espagnola, the native name being Mail (mountainous) or Quiequica (vast). The Spaniards explored the island and almost exterminated the s.000,000 native Indians, whom they replaced with African negroes. By the Treaty of Ryswick (1697) the western portion of the island was ceded to France, and in 1803 the territory was abandoned by the French, and a republic was proclaimed under the aboriginal name of Halti. In seas the rule of the Haltian President was extended over the whole of the island, the eastern portion having declared its independence of Spain in rear. Since 1844 the eastern portion has formed a separate republic (see Dominican Republic).

The area of the republic is re, soo square miles, with a population estimated at s.cog.700. The mountains are richly and heavily timbered, and susceptible of cultivation pearly to their summits; it is probably the most fertile spot in Indies, whilst its harbours, especially Fort-as-Prince, offer considerable facilities to foreign trade. The principal productions are coffee, logwood, cooks, cetton, hides, sugar, honey, gums and oisseds, these being the chief exports. It is said to contain mines of gold, silver, copper, tin, and iron. Its commercial prosperity has a almost aunihilated by repeated revolutions. recu amous amministed by repeated revolutions. In November, segs, both Houses of the Congress rasified a treaty with the U.S.A., establishing a virtual protectorate over the Republic, which came into effect in May, 29st. An armed Constabulary, rural and urban, under American efficier. In the bean constituted, and a constraint consummery, rural and urban, under American efficiers, has been constituted, and a constituted territo in attached. The conduct of the United States Marines, gendarmerte, and black troops, efficiently Americans, was severely cristicised luring the Presidential Maction empalge of inc. Grave accountables were brought against by U.S. Alministration, some of the accountables of the accountables, after durant accountables, and the communications. May all and the disk of the common and the County

was amended in June uses, and under the pe visions the President is elected for four years a there is an elective legislation. The princip foreign trade is carried on with the Unite States, Great and Greater Britain, France, at Germany. French is the language of country.

# HUNGARY. (Magyaria.)

Governor, H.S H Admiral Nicholaus von Horthy of Nagybanya, born, 1867

sworn in March z, 1920.

MINISTRY (July 19 1920). Premier and Minister of Commerce, Count Paul Teleki.

Foreign Afairs, Count Csaky. Interior, M Ferdinandy. Finance, Baron Koranyi.

Commerce, M. Rubinek. War, Maj Gon. Sréter.

Jurtor, Dr. Tomesányi. Agriculture, M. Nagyatádi Szabó Small Holdings, M. Sokorópátkai Szabó. Public Worship and Education, M. Haller. Notionalities, M. Bleyer.

Pood, Dr. Vaas. Public Works and People's Welfare, Dr. Benard. Hungary was declared a Republic on Nov. 17, 1918, its territories being decreased from the area of the former Kingdom of Hungary (which was united to the Austrian Empire by the identity of sovereigns) through the transfer of Transylvania to the Rumanians and of Creatia and Slavonia to the new Yugo-Slav Kingdon (y,v.). The area of the Republic is about 32,800 aq. miles, with a population (almost entirely Ma - yar) retimated (ageo) at 7,48,000. The political neighbours are Czecho-Sovakia on the N., Yugo-Slavis on the S., Rumania on the E., and Austria on the W.

On the declaration of Republican institutions in 1918, Count Karolyi assumed office as Pro-visional Pre-ident, but on March 22, 2929, Count Karolyi resigned, and was succeeded by a "Bel-

\* The external disbt nor also the same has been paid since styn, and arrears of inte on Jan. z. 2)27, to nearly £ 2,000,000.

shevik" administration with a "Seviet (Workshevis," administration with a "Seviet (Work-men's Council), in which Bels Ken. (or Coban) was the dominant personality. This administration was diven out of power by the succession of the Rumanian military forces (which invested Hungary and occupied Buds Pest) and "west followed by a Socialistic Government under Julius Peidel (Aug. 1, 2019). Six days later the Socialistic Government was superseded by an administration amonined by the Archduke administration appointed by the Archduke Joseph, who accepted office as Provisional President, Aug 7, 1919, but resigned in consequence of the protests of the Largue of Nation's delegates in Paris.

M. Huszir, who became Premier at the instance of the Allied Representatives in the autumn of page, "accepted the poet on the understanding that he should be relieved as soon as a Governor had been appointed and the constitution of the country had been lawfully re-established. This was attained by the appointment of Admiral Nicholaus von Rorthy of Nagybanya as Governor of Hungary on March r. resc, whereupon M. Huszar resigned, but at the request of the Governor continued in office until March zg. Admiral von Horthy was previously Vice-Admiral of the fleet of the Austro-Hungarian Monarchy; during the Communist era he was Minister of War to the Hungarian Government at Szeged, and organised what has since become the Hungarian National Army. His appointment was effected by vote of the National Assembly, which with the average him and with a with the average him. gave him royal rights, with the exception that his approval is not necessary to the verification of laws made by the National Assembly.

On the retirement of M. Huszar, the post was filled by M. Simonyi-Semadam, who remained in office until after the signing of the Treaty of the

All religious are tolerated; by far the greater number of Magyars are Roman Catholics. The parcelling out of the great estates, which was forcibly attempted during the Karolyi regime, has been continued to a small extent, but on an economic basis and at the initiative of the owners; a land-reform bill aiming at the forced sale of the properties exceeding a given area is under discussion.

A single chamber National Assembly (introduced in Nov., 1918, in place of the Upper and Lower Houses of the former Parliament) is

elected by universal suffrage

The greater part of the area of present Hungary consists of the Alföld or Great Plain, parts of which may be considered as among the most fertile for ag icultural purposes in the world, fertile for a centificat purposes in the words, producing grain of excellent quality and supporting a number of horses, cattle and awine. The mountainous districts having been ceded to surrounding states by the Peace Treaty, Hungary has been reduced from its former wealth to comparative poverty in forests and mines

parative poverty in forests and mines.

Prior to the war Mungary imported merchands: to the value of approximately £38,000,000, and exported approximately £78,000,000 analy; in the year rope the importe amounted to about Kr. 2,000,000. Taking an average exchange equivalent, hased on Zurien quotation. for the year root, these amounts may be taken as £00,000,000 and the manual may be taken as £00,000,000 and fungary touches the sea. The length of navigable-givers is diffusion, in the present length of navigable-givers is diffusion.

The pre-war revenue of Hungary was about , as million kronen (.c.a. yas, see), whereas the stimated revenue necovering to the Budget simulated by the Minister of Finance to the faithful Assembly on Soit. 24, 2500, for the latt upo-en, amount to as, so, 25, 25, 2000. The public debt stood at 6,000,000,000 kronen fancements, and the present amount may be (Angamese), and its present amount may be estimated at about the concessor kronen, but this is subject to decisions that may be given by the Esparations Commission which has not yet osgun to sit in Budapest.

Captral: Budapest, on the Danube, has a population at present estimated at 1,071,500. The other large towns are: Szeged (120,022), and Debreosen (20,000). The value of the ktone has fluctuated during span between Kr. 2000 per £1

eterling.

· Sec also YeppelShein.

peak of the Alps, is in the French Pennine Alps, but within the Italian borders are Moute Rose (19,227 feet) and several peaks from 12.000 to 14.000 feet. The chief rivers are the Po, the Adige, the Tiber, and the Arno.

GOVERNMENT - Italian unity was accomplished under the House of Savoy, after an heroic struggle from 1848-1870, in which the great patriots Mazimi (tom 1805, died 1872) and (born 1807, died 1882) were the (larıbaldı principal figures It was completed when the Austrians (under stress of the war with Prussia) evacuated Lombardy in 1866, and through the evacuation of the Papal States by the French in In 1872 the King of Italy entered Rome, 1870 and that city was declated to be the capital. The government is that of a constitutional monarchy with a legislature of two houses the Senate (of 385 life members appointed by the King), and the Chamber of Deputies of 510 members (elected by adult manhood suffrage) The maximum duration of Parliament is syears: Deputies receive 6,000 live numually.

PRODUCTION - Agriculture (including the growing of grapes, olives and chestnuts) is the Italian wines are numerous principal industry and celebrated, and olives and olive-oil are furnished by Tusonny, Liguria, and the province of Bari; while fruit abounds and is largely exported The cultivation of the silkworm forms an important industry. Among the principal minerals are iron, load, zinc, copper, manganese, and antimony ores, sulphur, gypsum, amianthus, alum, and boracic acid. Silver is found in Sardinia, and some gold in the Alps. Salt is a Government monopoly. In 1918 the produce of the vines amounted to 1,237,632,000 gallons, and that of the olive crop (2017) to 45,022,000 gallons. The principal exports are olive-oil, wine, candied oftron, sienna earths, pastes, coral, rags, boracic acid, raw and thrown silk, hemp, cattle, straw hats, rice, iron, zinc and copper ores, sulphur, marble, fruit, vegetables, fresh and prepared meats, poultry chemical products, weeds, 100ts, &c., for dyeing and tanning, artistic works, &c The imports chiefly consist of cotton, wheat, coal, coke, chemicals, colonial produce, yarns, jute and manufactured goods, woollens, raw sitk, silkworms eggs and cocoons, machi-nery, fron and steel in bars, plates and ralls, hardware, raw hides, horses and cows, fixed offs, sait fish, dye-stuffs, tobacco, earthenware, &c. The manufactures are woollen, cotton, hemp, and linen yarns and tissues, leathers, straw and felt hats, furniture, chemical products, paper, agricultural and other machinery, prepared meats, artistic works (with as mosaics pottery, Venetian glass, alabaster ornaments), de Sugar is extracted from best in large quantities for home consumption.

Italian Navy is about 40,000 all ranks. Specia and Pols, the chief naval and military ports of the kingdom, are securely fortified.

EDUCATION.—Primary Education is free and compulsory, and evening continuation cineses are also compulsory for military recruits. It is maintained by local taxation and State grants. Secondary education is generally State-maintained, and schools are increasing in manger. Several of the Universities are of very smelest foundation.

COMMUNICATIONS.—In 218 there were 22,223 miles of railway open for traffic; the post-officer numbered 22,344, and there were 25,235 falles of telegraph line. The sea-going commercial marine (227) consisted of 344 steamers (\$22,365 tons) and 4,456 sailling vessels (252,365 tons). In 224, 752,333 Italian and 24,356 foreign vessels (total tomage 55,285,200 entered and 161,830 Italian and 25,250 foreign vessels (55,085,460 tons) cleared at Italian ports. It is proposed to construct a harbour at Ostia, at the mouth of the Tiber, which will convert Rome into a scaport; improvements in the water connexion to Milian are also being taken in hand.

	Total	650,020	2,467,000

Erstren is a Red Sea colony, and extends from Ras Kasar, 18' a' N, to Ras Demoira, 10' 42' N, and is bounded on N.W. by the Anglo-Egyptian Sudan, on S. by Abyssinia, and on S.E. by French Somaliland. It consists of a triangular portion of barren and sandy lowland with a coast-line along the Red Sea of about 1700 miles, and covers a total area of 60,000 square miles, with a population of about 400,000, of whom about 3,000 are Europeans. The capital is Asmars, Massowa being the chief port, where there is a good harbour. The prinport, where there is a good harbour. The principal product is sait, of great value as being the monetary currency of Southern Abyssinia.

\*\*Ronks.\*\*—Under the Treaty of Seves Italy

received from Turkey the right to occupy the Asia Minor district of Koma (40,000 square miles) of which, however, the suzerainty remains

vested in the Sultan.

Somaliland.—Italian Somaliland comprises a coastal strip on the Gulf of Aden and the Indian Ocean, from zz° N. lat. to the Equator, and is bounded on the N. by the Gulf of Aden, on E. by the Indian Ocean, and on W. by British Somaliland, Abyssinia, and British E Africa. and British Somaliland lie between Eritrea and The total area is about Italian Somaliland. 140,000 My. miles, and the population is estimated at 450,000. Agriculture and camel and cattle rearing are the principal industries. The capital is Mogadisho, on the Indian Ocean. Tientsin.—Italy obtained in 1988 a concession

of land fronting the Peiho river (China), with a total area of so square miles and a population of

about 17,000 natives.

Tripoli.—The Turkish vilayet of Tripoli and the mutescarifat of Benghasi on the northern coast of Africa, were occupied by Italy in 2922-22, and under the Treaty of Ouchy (Oct. regis) the sovereignty of the province was transferred to the King of Italy, the spiritual head-ahlp over the Muhammadan population being retained by the Sultan. Tripoli is the most easterly of the Barbary States, extending from the frontiers of Tunis to those of Egypt, a distance along the coast-line of nearly resembles, and inland to the south a distance of about see miles. The transferred territory comprises the four sub-provinces or Mutes-sarffilk of Tripoli, Khoma, Jabel-el-Gharb, and Ferman, and also of Bengham or Cyrenaics, a total area of 420,000 square miles, with a population of about too.coo. There are no rivers in the country, and, the rainfall being precarious, a good harvest can only be reckone

four or five years. Barley, dates, olives, oranges, temons, and vegetables are produced, and the principal imports are metals, British and other European manufactures, tea, beads, wine and spirits, besides a number of articles for barter in Wadai, Bornu, and the Western Sudan, whither caravans proceed from Tripoli. The principal articles of exports are ostrich feathers, every skins, sponges, hides, esparto grass, cattle, and horses. The ancient rulus in Cyrenaica, i.e., at Cyrene, Ptolemais, and Apollonia, are interesting to explorers, as well as those at Leptis Marin, which is close to Khoms, or 70 miles from the fit of Tripoli. The population of Benghazi consists of Araba, Greeks, Maltere, and a few Lovanthues. The commerce in cereals, wool, cattle for Malta, and other agricultural produce, is considerable, when a sufficient rainfull causes good harvests. The capital of "Tripolitana" is Tripoli (population 50,000), and of Cyrenales, Benghazi (popuintion 35,000).

Consul General (London), Shichitato a Broad Street Place, E.C. a. Consul (Lourpool), M. Kishi Yada,

((Hasour), A. S. Younger,

(Manchester)

(Middlesbrough), Waynman Dixon. This ancient and extensive Empire consists of , four large and many small islands, said to comprise in all above 4.23, the principal of which are Hondo (the name of the Empire being Miggon), Shikoku, Kiū-shit, Hokkando or Yezo, situate to the north of the main island, from which it is separated by the Tsumara Straits, and Formosa, called by the Japanese, Taiwan. The Ainu, an uncivilised but harmless tribe, who in ancient times occupied the greater part of the (70s of them over 1,000 tons), and 2,000 in

country, are still found in Yasa. The Eurile Islands have belonged to Japan since classical in 1876 ahe incorporated the Luchu (Binktiu) Islands under the name of "Prefacture of Okinawa." The empire, with its dependence, comprises an area of 23,386 square miles, with a population (Dec. 1978) of 29,545,386. The islands are eminently volcanic, and 18 of the summits are still active: the chief of these, Fuji-san, or Eujino-yama, the loftiest and most sacred mountain of Japan, about sixty miles from Tokio, is 12,370 ft. high, and has been definant eluce 1707. Japan is also liable to frequent, and occasionally disastrous, earthquakes. The and occasionally disastrous, earthquakes. country is very mountainous, and not more than one-sixth of its area is available for cultivation. It possesses numerous fine harbours. The soil is productive, teeming with every variety of agricul-tural produce. Copper, iron, sulphur, lead, antimony, and zinc abound, whilst agate, cor-nelian, and rock crystal are also found. Gold is found in the island of Bado, and silver mining is prosecuted on a small scale; while there is a good supply of midding coal.

Petroleum is also being produced in large quantities, especially in the Province of Echigo. Among the vegetable productions may be noted the camphor-tree, paper mulherry, vegetable wax-tree, and a lacquer-tree, which furnishes the celebrated "lacquer" of Japan. The principal timber trees are the Cryptomeria japonica, Pinus Massoniana, and Zelkowa Keaki; the Paulownia imperialis is largely used for fancy boxes and works of art; the maple is merely for ornament. Chestunt, oak, beech, and elm are comparatively rare and little used. The tobacco-plant, tea-shrub, potato, rice, wheat and other cereals are all cultivated; rice is the staple food of the people, about 380,000,000 lushels ( 20 per cent imported) being consumed annually. Agriculture, upon which the Japanese bestow great care, is their chief occupation The coasts are extremely rich in itsh. The floral kingdom is rich, beautiful, and varied, though scented flowers are conparatively few. Fruit, for the most part of inferior quality is abundant; English fruits, such as apples, strawberries, pears, grapes, tigs, and peaches are being produced.

Commerce and Industry .- The chief manufactures are silk and cotton, cotton yars, matthes, paper, glass, lacquer ware, porceisis, and bronze, and shipbuilding is an important and bronze, and shipbuilding is an important industry in the yards. The chief imports are raw cotton from India, U.S., Egypt, and China; flour from the U.R.; and piece goods, metals, manures, woollens, wool, drugs, ralls, locass-tives, and machinery from the U.R.A. and Europe Sugar is largely imported from the Dutch East Indies, Philippine islands and Formone; indigo-from Germany, British India and Dutch East Iron termany, priting main and putter account indice; hears, peas, and puise from Usina and Korea; and rice, principally from Bettish India, French India, Korea, Siam, and Chica. The chief exports are sift, octably parms, rice, tea, fish, copper, matches, coal, tamphor, straw plaits, porceisin, earthenware, lacquer ware, and marine products. marine products.

Commissications.— There were \$,554 miles of railrest open in March, 2500, in addition to 2,550 miles open in Eorea and 1,257 miles open in Eorea and 2,257 miles in Formans, while the South Manchurian Estiway (China) is under Japanese control. The mercantile marine consisted in 250 of 3,277 steamers above he tous cost of them over 1,000 tous of 3,000 and 3,000 millions.

els over see tons. The total tonnage entered and sleased at open porte in 1929 was 84,300 April (64,55 vessels). In 1929 there were 7,577 post-offices desling with 2,200.850,320 postal packets and 25,782 miles of belegraph line carrying 75, 386,756 messages outwards, and 76,997,583

Defense. Service in the Army is universal and compulsory between the ages of so and 40. The peace effective is 272,732 of all ranks. The wer strength is: First line, field army, about we strenged is: First line, here army, accounge, and second line, fully trained, about x, org, xec. The Navy includes xy battleships, g battle struiers, as cruisers, as coast defence ships, 8 gunboats, 89 destroyers, so torpedo hoats and 35 submarines (Bept. 1980). Japan declared war against Germany on Aug. 23, 1924, and her fleet was sotive throughout the war, while has second and assisting to reastors order in her troops are assisting to restore order in

Education is in the lower grades free and compulsory. High schools are State-aided, and prepare for a 3 years' course at the Universities, which is largely devoted to the study of Euro-pean languages. There are high schools for girls, and the technical and special schools are well attended. There are five State Univeraities, at Tokio, Kyoto, Tohoku, Hokkaido and Kiushu.

Formoss, .- The island of Formosa (Taiwan) was coded by Cldna to Japan (June 2, 1898) in accordance with the Treaty of Peace. Its total awa is 13,500 square miles, with about 3,450,047 inhabitants (1977). Imports, Yen 21,099,376; experts, Yen 40,215,791, in 297. The colomy has been self-supporting since 2506. Estimated sweameand expend ture(1918-19), Yen 33,251,425.

QAPTAL, Tailoku. Population (1917), 181,933.

Saphalin (Karafuto).—The southern half of this island was cedon by Russia at the close of the Russo-Japanese war. The ceded territory the a total area of 9,3mg sq. miles with a popula-ton (1925) of 75,799. The Japanese Government The local exchanges value of the pen is taken at its self. for the purposes of conversion, but in Aug., spen, its value was se. 6d.

is encouraging the settlement of agriculturists,

us encouraging the settlement of agriculturists, and there is a large fishing industry: Betimated revenue and expenditure (spill-19) Yen 4, 397,392. The Kucantung Pentinulas (capital, Dairen, formerly Dainy), which had been leased to Bussis by China, was similarly leased to Japan miles; population, 578,595. Dairen provides Japan with a mainland port, ice free all the year round and the peninula is critic. Turouta round, and the peninsula is fertile. Imports (1927), Yen 148,928,309; exports, Yen 148,928,309; Estimated revenue and expenditure (1928-19), Yen 6,553,374.

CAPITAL, Dairen. Population (1917), 90,385. The Pescadores (Hokoto) consists of about 14 islands, with a total area of 84 square miles. and a population of (1917) of 56,931

Korea (Cho-sen).—By a treaty of Aug. 23, 2920, Korea was annexed to Japan and became part

of the Japanese Empire.

Korea is situated between 222° and 228° R. long., and between 24° and 43° N. lat., and the coast is fringed with innumerable islands, of which the largest is Quelpart. Total length, 600 miles from north to south, and greatest breadth rag miles from east to west, with an area of some 72,000 square miles. Population estimated at 16,968,997 (Dec. 1917); there are about 333,000 (Dec. 1917) Japanese in the country. The soil is fertile, but mountainous except in the river valleys. About 8,790,580 acres are under cultivation, the staple agricultural products being rice and other cereals, beans, cotton, tobacco, and hemp; the other natural products are chiefly gold and hides. Ginseng, a medicinal root much affected by the Chinese, is largely grown under Government supervision in the province of Pyeng-An, and, being a Government monopoly, forms a rich source of revenue. Gold, copper coal, iron, and other minerals are distributed throughout the country. The principal exports are beans, rice, livestock, cowhides, ginseng, wheat, barley, iron ores, and raw cotton. Manufactures are as yet in a primitive condition, the principal being hemp cloth, brass ware, and an excellent quality of paper resembling the Japanese article, but stouter. About 73 per cent. of the sca-horne trade is carried in Japanese bottoms. Considerable progress is being made in the direction of the proper lighting of the coast. The total railway mileage open to traffic is 1,231 miles. Estimated revenue (1917-18), Yen 62,589,309;

expenditure l'en 6a, g6a, 277.

Imports into Korea, 1919 .... Yen 189,250,000 Exports from Korea, 1919 ..... ,, 185,500,000 Pacific Islands .- Under the Treaty of Verstiller, 1989, Germany renounced the sovereignty of all her over-assa possessious, and the German Pacific Islands N of the Equator have been allocated to Japan. These islands, in Micronesia, are the Pelew, Caroline, Marshall and Ladrone groups, with a total area of about 800 aq. miles,

and a population estimated at respect.
Shoutung.—The German possessions in the
Shoutung Permissula of China (Kino-Chao, &c.),
allocated to Japan, have been restored by the

latter to China.

#### KHIVA.

Khan, H H. Said Asfendiar, b. 1871, succeeded

Khiva lies between Bokhara and Russian Trans-Caspia, and has a total area of about 56,000 square miles, with a population of 800,000, of whom about half are nomads. The country occupies the fertile delta of the Oxus, and is highly productive. The capital (Khiva) has about 20,000 inhabitants

#### KURDISTAN.

Kurdistan is a mountainous district of Eastern Asia Minor, between Arienia (N), Syria and Mesopotamia (S.), Persia (E.), and Turkish Anatolia (W.). The Kurds are a semi-nomatic tribe inhabiting the mountainous regions of Turkish Asia Minor and of N.W. Persia. They are believed to be the Karduchi of Xenophon's Anathenia, and for centuries they have lived in quasi-independence, punctusted by raids and subsequents punitive expeditions. In spec the automomy of Kurdistan was recognised by Turkey and Persia, and by the Supreme Council of the Alliged Powers.

The area of the country is estimated at \$5,000 to ye,000 square miles, with a population of a to a millions. The chief centres are Diarbekr, Bitlis, Van (to the east of Lake Van) in the former Turkish dominions, and Urmsa (to the west of Lake Urmsa) and Kermanahah, in the Persian dominions, Lake Van (2,000 sq. miles

in axioni) occupies the central portion of the former Vilayet of Van; Loke Dreider 1, for an about 4, see feet above as level, and its matera are so salt that fish cannot live therein.

The climate is severe, with a short hat summer and long and severe winter; but cereals, vines and fruit are abundantly cultivated on the slopes of the mountains; rice is grown in she hot, well-watered plains, while the rich pasture-lands of the slopes and valleys support large herds of horses, mules and sheep. The minson wealth of the country is almost entirely undeveloped, but it is believed to be very great, and there are numerous hot and cold mineral springs; salt is obtained in large quantities in the neighbourhood of Lake Van.

The Kurds are Muhammadans and flerce persecutors of the Christians in their districts and in the neighbouring territory of Armenia.

Liverpool-Consul-Gen., Senor Teodoro Frezieres Bouth John Street.

Mexico occupies the southern part of the continent of North America, with an extensive seahoard to both the Atlantic and Pacific Oceans, extending from zg to 3z 3o'N. lat. and 3y to zzy W. long., and comprising one of the richest and most varied zones in the world. It comprises 27 states, 3 territories, and the federal district of Mexico, making in all 32 political divisions, comprehending an area of 768,883 square miles,

with a population of (1910) 15,003,007.
The two great ranges of North America, the Sierra Nevada and Rocky Mountains, are prolonged from the north to a convergence towards the narrowing 1sthmus of Tehanteper, their course being parallel with the west and east The surface of the interior cousists of an elevated plateau between the two ranges, with steep slopes both to the Pacific and Atlantic (Gulf of Mexico) In the west is the Ponjustila of California, with a mountainous surface separated from the mainland by the Gulf of California. The Sierra Nevada, known in Mexico as the Sierra Madre, terminates in a transverse series of volcanic peaks, from Cohma on the west to l'ithitepote on the east, the intermediate and highest peaks being Ixtaccihuati (17,899 feet) and Popuratepetl (19,784 feet). The low-lying lands of the coasts form the Twine Caliente, or tropical regions (below 3,000 feet), the higher levels form the Tierra Templada, or temperate region (from 3,000 to 4,000 feet), and the aummit of the plateau with its peaks is known as Tierra Fria, or cold region (above 5,000 feet). The only considerable rivers are the Rio Grande del Norte, which forms part of the northern boundary, and is unvigable for about 70 miles from its mouth in the Gulf of Mexico, and the Rio Grande de Santiago, which runs from Lake Chapala to the Pacific The remaining streams are governed by the formation of the land, and run in mountain torients between deep-cut canons or "barr aucas " The largest fresh-water takes are Chapala, some 50 miles in length, and Patzenaro and Yochimileo. In the north-west are saline and Vochimitee in the latitude Vellow fever sometimes occurs at Merida, Yucatan.

The carbest invaders, or Toltees, gave place in the 13th century to the Azlees, carliest invaders, or who were conquered in the 16th century by Spanish adventurers under Hernan Coites . Spanish rule was established at Tenochtitlan, a 14th century Aztec city (now Mexico), and Mexico remained a Spanish dominion until its freedom was asserted by a revolutionary war. 1810 1827. From 1837-1848 the province of Texas gave rise to hostilities with the United States, terminating in a three years' war and a cession of the disputed territory to the victorious northern States. In 1820 a Republic was proclaimed, but Ituerbide declared himself Emperor He was shot in 1824, and a Republic n established In 1862 the French in saer was again established troops came to Mexico, and in 1864 an Empire under Ferdinand Maximilian of Austria was declated In 1867 the downfall of the Empire and the death of the Emperor gave rise to the new Republic, which has endured to the present day The most prominent of modern Presidents Parario Diaz, who ruled (except during

The remains of Hermon Cortes have been slettentely or ated in the Temple of Jesus Mexico City. They are outsined in a marble vault, with the funeral garments.

site-4) from 1876 to May 18, 1921. Since 1811 there have been many internal disturbances and considerable friction (amounting almost to a state of war) with the United States. On July 18, 1924, Venustiano Carranna assumed control of the executive, but he was overthrown by a further revolution in 1890, and is believed to have been shot by the insurgents.

Acapulco, Manzanillo, Mazzilan, Salina Cruz, and Gusymas are the chief ports on the Pacific; and Vera Cruz, Tampico, Progreso, and Puerto Mazico on the Atlantic or Gulf of Mozico. There were zg.8sp. miles of railroad open on Sept. 76, 2928, and 48,697 miles of telegraph. The railroads have in a large measure been built by American

and English companies.

The principal agricultural crops are maize, wheat, barley, Chile-pepper, sugar, coffee, cotton, tohacco, vanilla, fiax, grapes, and all kinds of tropical fruit. The maguey, or Mexican aloe, yields a favourite beverage, "pulque"; other species of the same plant supply pita-fiax and sisal-hemp (henequen). The forests abound in mahogany, rosewood, ebouy, and caoutchouc trees. The mineral wealth is very great; silver and gold, copper, lead, and quicksilver, iron and coal, are the leading products of the mines. Woollen and cotton spinning and weaving, and other branches of industry, are encouraged hy high protective duties. The imports, nevertheless, consist very largely of textile manufactures. Of the exports as per cent. consist of silver and gold; sizal hemp (henequen), coffee, hides and skins, timber, logwood, vanilla, tobacco, dyestuffs, sugar, and drugs ranking next in importance

During sess legislation of a confiscatory nature regarding the Vexican olifields caused a diplomatic rupture with the U.S. and Great Britain. The monetary system has recently been placed

on a gold basis Qutstanding debt (June 30, 1929) \$529,572,085 (- U.S \$264,786,042).
The language of the country is Spanish

A maritime Kingdom of Central Europe, situate on the North See, in lat. go 46' 53' 34' N and long. 30 mm - 7" z4' E., consisting of zz provinces, and containing a total area of zz, 76z square miles. with a population in March, 1920, of 6,843,436. The majority, about three-fifths, belong to the several Reformed Churches; and the remainder are Roman Catholics, with about 207,000 Jews The land is generally flat and low, intersected by numerous canals and connecting rivers in fact, a network of water courses. T in fact, a network of water courses principal rivers are the Rhine, Mass, Table, with the mouths of the courses The and Ymen, with the mouths of the Scheld The chief native products are herrings and other fifth, natile, horses, awinc, sheep, poultry, eggs, seeds, goistoes, oats, rye, wheat, barley, beans, peak, buckwheat, bestroot, chiefury, flax, hemp, tohecus, said dairy produce. The principal manuscipolaries are shipping, bricks, margarine, cocosa, chocolate, linen, rich damasks, oottons, woollens, oigars and other manufactured tobacco, candles, confectionery, earthenware and pottery, glass bottles and ware, chemical and phermaceutical products, matches, perfumery, sugar, bicycles and automobiles, boots and shoes, starch, poisto flour, engines, metal substances, works of cast in gold and cliver, incandescent

lamps, machinery, motors, paper, printing, elis, heer, "geneva" and other liqueurs. Dismond-cutting employs numerous hands in Amsterdam.

Communications.—The total extent of canals is about 2,000 miles. There were a,227 miles of railroad open in 1918, and 5,349 miles of telegraph line. The mercantile marine, on Dec. 31, 1910, consisted of 427 steamers, tonnage 2,682,236 (cubic metres) and 120 sailing vessels of 22,276 tons (cubic metres). In 1919, 18,86s,8es tons (cubic metres) entered, and 19,177,204 tons (cubic metres) cleared at the various ports. An Act for the damming and draining of the Zuyder Zee was passed in 1918.

Defence .-- The Home Forces consist of modified militia, purely defensive, recruited by voluntary enlistment supplemented by con-scription Military service is unpopular. The numbers on a peace footing of the army are 22,000. The first and second lines can be raised to a war strength of 200,000. The Royal Navy consisted, on July 1, 1918, of 118 vessels (7 of them ironclads, a profected cruisers, as coast and harhour defeuce vessels, 8 torpedo-hoat destroyers, 38 torpedo-bonts, so mine-layers, 9 submarities, so special service vessels and to for special service in the colonies.

Education - Private State-aided primary instruction is encouraged rather than public, though the latter is provided if required, by local taxation. The average attendance at primary schools is go per cent. Secondary schools for working classes are numerous, well equipped and attended The principal Universities are at Amsterdam, Groningen, Leiden, Utrecht, and Delft

Trade and Commerce -The Netherlands figure largely in the trade returns of the United Kingdom. The imports of British produce and manufacture in the year 1918 were valued at £,14.986,978

Apparel £75 941 Machiners Chemical political and fine to all coke & fuel 151 150 Grense, Tallow &c dz 721 Metals (Iron, &c )

Norway, an independent kingdom, founded in 87s (fundamental law of May 27, 1814), was united with Sweden under the same King from Nov. 4. with sweden under the same aning from Nov. 4, 2824, to June 7, 1902, when the union was dissolved. The Parliament of 123 members is called the "Storthing," which is divided into two sections, chosen by itself to discuss projected Bills, called "Odelsting" and "Lagting." Norway, the western and northern portion of the Scandinavian peninsula, is about s, see miles in length, its greatest width about age miles. It is divided into se pro-vinces, or amts, and comprises an area of ras, resq. miles with a population (1918) of a,611,287. The coast-line is extensive, deeply indented with numerous flords, and fringed with an immense number of rocky islands. The surface is mountainone, consisting of elevated and barren table-lands, separated by deep and narrow valleys. The amon, separated by deep and parrow valleys. The cultivated area is about one-thirtieth part of the country; furests cover nearly one-fourth; the rest consists of highland pastures or unin-habitable mountains.

Agriculture, though pursued with some vigour of late, is unable to furnish sufficient produce for home consumption; hence it has been necessary to import considerable quantities of corn, mest, and pork. The fisheries give employment to a large part of the population

throughout the year. The most important are cod and herring; the exports of these with other sea-products and fish-oil were valued as \$\tilde{\text{state}}\), the mineral pro-ducts are increasing, the total value won in 1916 being 30,701,000 kroner. Timber - dressing, mechanical engineering, textile manufactures, Timber - dressing, ship-building, and pulp-making are the principal departments of Norwegian industry. exports of produce of the forests were valued at 163.401,000 kroner in 1917. The imports consist chiefly of the necessary articles of consumption. The chief exports consist of timber, matches, fish, oil, and other products of the fisheries, pulp, paper, skins and furs, nails, minerals, stone, ice, calcium carbide, condensed milk, butter, margarine, tinned goods, &c. Norway voted for prohibition of alcoholic heverages in 1919 (385,000 for prohibition, 275,000 against).

Defence .- Service in the National Militia is universal and compulsory The war effective is about zzo, ooo of all ranks. In time of war all males between the ages of 25 and 55 are liable for service. The Navy consists of 4 ironelads, s coast defence monitors, sy torpedo-boats, 3 gunboats, 3 destroyers, 5 submarines, and a few smaller vessels.

Education is compulsory and free between the ages of 7 and 24, schools being maintained by local taxation with State grants in aid. The attendance is high. Secondary schools are provided by the State, by local authorities, and privately There are to special schools and industrial and technical institutes. The University of Christiania was attended in sore by 1,500 students

Communications -The total length of railways open in 1916 was 1,973 miles, of which ser miles were private lines. The length of telegraphs and telephones belonging to the State in June, 1916, was 14.070 miles. The mercantile marine, Jan. 1, ror6, consisted of 3,325 vessels, of 1,764,470 tons. During the war, to June 1, 1918, 698 Norwegian vessels have been sunk by torpedo or mine, 970 seamen have been killed, and £37,000,000 has been paid by war insurance.

Consid-General in London, Alfred James, 18, Eldon Street, R.C. a.

An inland State of South America, situate between acc. 6° 30' S. lat. and 34° 62' W. long. The area of Paraguay (exclusive of the Chaco) is computed at \$5,000 square miles, and it contains a population of about \$00,000.

Paraguay was visited in 1527 by Sebastian Cabot, and in 1538 was settled as a Spanish possession. In 1522 Paraguay declared its independence of Spain, and from 1814-1840 was governed by Francis, a Paraguayan despot, who was succeeded by Lopez, 1840-186s. In 186s Francisco Solano Lopez succeeded his father, and in 1864 declared war against Brazil, Argentina and Uruguay being involved in the struggle against these three nations Lopez conducted a five years' war, which terminated in his defeat and death at the Battle of Cerro Cord, March x, 2870. This dogged struggle reduced the country to complete prostration, and the population, which was see, see in 1837, is alleged to have failen in 1890 to age, see, of whom harely 30,000 were men. The present constitution was adopted at the close of the war, and under its provisions the head of the oxecutive is the President. elected by an electoral college for four years and ineligible for office for eight consecutive years after the expiration of his term. A Vice-President is similarly elected, and succeeds automatically in the case of the death, expulsion or absence of the President. There is a Cabinet of 5 members. The republic is subject to frequent revolutions, of which those of rozz and rozz were exceptionally florce and sauguinary.

Paraguay proper consists of a series of plateaus, intersected by abrupt ranges of hills, some of which are said to reach an altitude of s,000 feet above sea level. The Paraguay and Alto Parana rivers are navigable at all seasons. Many of the tributary streams are also navigable for much of the year. The Pilcomayo river is navigable for zae miles from Asuncion and (above the shallows there encountered) for a long distance north west; but is liable to shrink unduly with drought The plateaus are covered with grassy plains and dense forest, the soil being marshy in many parts and liable to floods; while the hills are covered for the most part with thickets. The streams flowing into the Alto Parana descend precipitously into that river. In the angle formed by the Paranh-Paraguay confluence are extensive markes, one of which, known as "Neembuch," or andless, is drained by Lake Ypos, a large lagoon, south-east of the capital. The Chacu, lying between the rivers Paraguay and Pilcomayo and bounded on the north by Bulvia, forms the and councies on the north hybotra, forms the subject of a long standing dispute with Bolivia; it is practically a dead level, pierced by great rivers, and suffers much from floods and still more from drought.

The chief agricultural products are tobacco,

perba maté, orangea, timber, quebracho extract, aides and cassava (mandidos), maize, rice, mear-cane, ground-nuts, and other tropical

and sub-tropical plants. The forests contain many varieties of timber, but only cedar and a few of the best known hardwoods find a market abroad. Stock-raising is the chief industry. The chief articles of export are hides, timber, yerbs mate, tobacco, quebracho extract, cattle and meat products, oranges, and petit grain oil. The Army numbers s,oos to 3,000 men. A railway, 23 miles in length, which belongs to an English company, connects Paraguay with the Argentine railway system. The journey from Asuncion to Ruenos Aires (685 miles) occupies 53 hours. Train ferries enable the run to be 53 hours. accomplished without break of bulk. language is Spanish.

Persia—called by the natives Iran—comprise an area of \$50,000 ag. ma., with a population estimated at 20,000,000. By the Anglo-Russian Convention of Aug., 2007, Great Britain and Russia mutually engaged to respect the integrity and independence of Pernia, while marking out certain regions in S.E. and N.W. Pernia respectively in which each had, for geographical and economic reasons, special interests. On Aug. 9, spr9, this Agreement was superseded by a Treaty between Great Britain and Pernia, by which Great Britain agrees to respect the integrity of Pernia, and to provide a loan of Agreement in return for the provide a loan of £a,coc.coc, in return for the security of diplomatic and commercial relations hetween the two countries, and for the purpose of establishing order and developing the resources of the State.

Persia is mostly an arid table-land, encircled, except on the east, by mountains, those in the north rising to 18,700 ft. The central and eastern portion is a vast suit desert. The only navigable river is the Karun, which was opened to foreign navigation from Mohammerah to Ahwaz in 1888 There are only 8 miles of railway open, and travelling is mostly by caravans, and transport by pack-animals. The cost of carriage is, therefore, very heavy. An option for the construction of a railway from Khanikin to Tehran vid Kermanshah and Hamawas granted in 1980 to the Persian Railways Syndicate.

The chief products are cereals, cotton, gums, dried fruits, silk, tobacco, and opium. The minerals (little worked) are salt, iron, coal, copper, lead, sulphur, &c., with turquoises.
Oiffields in Southern Persia have been successfully worked by an English company
alnce xgos. The only important manufacture is that of woollen carpets (mostly a
domestic industry), but shawls, sliks, and cotton
fabrics are also produced. There are extensive forests in the north and west. Sheep and goats are numerous, and good wool is produced. The principal towns are Tehran (pop. 210,000), Tabriz (180,000), Ispahan (80,000), Meshed (80,000), Kerman (90,000), vzd (60,000), and Shitaz (60,000) The Persians are mostly Shiah Muhammadan; but there are many adherents of Bahiian (an eviectic form of Deistic religions), and Armenian Christians. The laws and popular education are based on the precepts of the Koran. Persia is divided into provinces, of which the principal are under Governors or Governors-General.

Owing to increasing popular discontent with a corrupt and incompetent administration and an extravagant Court, a nationalist movement began in Dec., 1905. In Aug., 1906, the Shah, Muzaffer-nd-Din, admitting the need for reforms, granted a Constitution. He was succeeded in 1909 by his son Muhammed Ali Shah, who was depused by the National Assembly in 1908, to be succeeded by his son, Sultan Ahmad Shah (ander the regency of Nasr-ul-Mulk, until

1914).
The revenue (£1,480,780 in 1913-14) is derived from land tax, Crown lands, customs, optum, salt, and lease of monopolies. The foreign debt of Persia amounted (Dec. 31, 1916) to £6,385,700. In 1919, under a special agreement, the British Government advanced to Persia the sum of £s,000,000, on the security of the revenue and oustoms duties. The apparent increase in the trade figures is due to the fall in the exchange. The British Empire was the chief trader in sery-se, and sent about three-fifths of the total imports. The sea-borne trade of Parsia passes chiefly through the ports of Bushire, Runder Abhas, and Mohammersh, and vid Baghdad. The shipping of the Persian Quif is principally

British. Persia's chief imports are section piece goods (mainly from England and India) are sugar (from Eussis and France), with tes, citto yarn, metal wares, gold and silver, perciping and indigo. The principal exports are dried fruits, raw cotton, pearls, opium, rice, wool, fish, hides and skins, carpets, and slik cocoons.

Peru is a maritime Republic of South Peru 18 a martime Reputate or Foura America, situated between 1° 31° 39″ and 32° 32′8, latitude and between 69° and 82° 12′ M. The territory between 87° 47′8. and 19° 12′ S. is still occupied by Chile, and representations are again being made for the return of three provinces, which were occupied by Chile during the Pacific War of 1879-188s. The area of the Rapublic is estimated at staces square miles. Republic is estimated at 323,000 square miles, and the population at 3,35,000. It is bounded on the north by the republics of Renador and Colombia, as the latter claims a territory in the Amasonian basin; on the east by Razil and Bolivia, and on the south by Chile and Bolivia

Part was conquered in the early 16th century by Francisco Pizarro (born 1498, died 2521), who subjugated the Incas (a tribe of the Quichus Indians), who had invaded the country some 500 years earlier, and for nearly three centuries Peru remained under the Spanish rule. A revolutionary war of zenz-zen catablished its independence, declared on July 28, 28mz. The constitution rests upon the fundamental law of Oct. es. 1846 (amended Nov. 25, 1860), and is that of a democratic Republic. The President and two Vice-Presidents are elected for four years by

two Vice-Presidents are elected for four years by direct vets of the people, and are ineligible for a successfully stem of office.

The country is travarsed throughout its longth by the Andes, running parallel to the Parific coast, the highest points being Huason on Kindi volcano (as, as Feet), Aregupa (or Mind) volcano (as, as Feet), Huason, (as, as feet), and Livings, Toeres, and Surasura, all over agase feet. There are four distinct regions, the cotta, west of the Andes, a low and desert except where watered by sensesses mountain straspes, but capable of Irrigation; the sterre or

western slopes of the Andes; the *punas* or mountainous wastes below the region of perpetual snow; and the inward slopes and boundless forests of the Amazonian basin. The coast region is sandy desert, except where watered by transverse mountain streams, but capable of cultivation in the highest degree by irrigation. The valleys running to the coast are very fertile, and the mountains are rich in minerals, among which silver, quick-silver, copper, cost (of inferior quality) and variadium are conspicuous; while in the depart-ment of Tumbes, along the coast, there are important beds of petroleum. Gold is found in many districts, but especially in the province of Carabaya, where mining on an important scale is carried on The eastern provinces are of vast extent and fertility, with a tropical climate. The medicinal productions of that region are of great value, comprising cinchons, or Peruvian bark (of which little is now exported), sarsaparilla, cogains, &c India-rubber is an important product of the country. Coca, coca, and coffee are grown on a small scale. Sugar and cotton are the staple agricultural articles of the country. The Lobos and other islands on the Pacific coast provide guano

The principal imports are coal, cotton, woollen, linen and silk goods, drugs, earthen and stone wares, machinery, explosives, metals and manufactures thereof, oils, stationery, paper manufactures, timber, and wheat. The thief exports are minerals and metals, petroleum, naw cotton, sugar, hides and skins, rums (chiefly rubber) and wool. In 1918 the U.S.A. sent 54 3 of the imports and took 46 6 of the exports, while the U.K sent z6 z per cent and took 32 7

per cent.

The total length of the railways open (sozg) was 1,724 miles There is also steam mavigation on Lake Titiaca and the River Desaguadero. The eastern rivers are also navigated to some extent by steam cust Wireless telegraphy extent by steam cuaft stations have been established in many places.

Defence - The Army is recruited by voluntary enlistment, supplemented by conscription, and numbers about 5,000 of all ranks; the Navy includes two cruisers built at Barrow, and a destroyer bought from the French Government, and a submarines

Spanish is the language of the country.

The Republic of Poland was proclaimed at Warsaw in November, 1918, and under the Treaty of Paris (June 28, 1919) the assentors to the Covenant of the League of Nations, and the signatories of the Treaty of Peace, guarantee the independence of the Republic, which is reconstituted (as far as possible) within the limits of the zath - century "Polish the limits of the 18th - century "Polish tommonwealth." This state extended in the Commonwealth." This state extended in the year 1778 oven an area of a83,000 sq. miles, and included a population of about 13,000,000. The political neighbours of the Republic are the Baltic Sea, the German Republic (Prussian Königsberg District), and the Republic of Lithuania, in the N.; the Republic of Czecho-Slovakis in the S.; Soviet Russia in the E; and Germany in the W. The present area of the Republic may be estimated at 200,000 as miles with a nonulation of 20,000,000, but sq. miles, with a population of 30,000,000, but the dispusition of the following areas has yet to be determined by plebiscite: the Regency of Opole (Upper Silesia) and the Teschen district (as between Poland and Czecho-Slovakia); and the Masurenland district of East Prussia (as between Poland and Germany). The predomi-nant religion of the people is Roman Catholic,

but all faiths enjoy equality, and there are large numbers of Protestants and Jews.

In 1986 hostilities broke out between Foland and Soviet Russis, and after initial successes the "Red" armies of Bolshevik Russis appeared likely to deal a crushing blow at Polish independence, the capital (Warsaw) being in peril of capture. A dramatic counter-attack by the Polish troops at the critical period reversed the nature of the campaign. Poland was enabled to obtain peace on favourable terms and claimed the obtain peace on favourable terms, and claimed the renunciation by the Soviet at Moscow of about 130,000 sq. kilometres, containing a population of 1,330,000 Poles, 1,800,000 Euthenians, 500,000 Ukrainians, 550,000 Jews and 500,000 of various nationalities. The advance of the Polish armies into Lithuania was the cause of auxiety among the Supreme Council of the Allies in the autumn of zgaq

GOVERNMENT.—A Republican form of government was adopted by the Constituent Assembly in rors, the President exercising the executive authority through a Ministry responsible to the Legislature. The Legislature consists of a single

Legislature. The Legislature consists of a single chamber (Sejm) elected by universal adult (male and female) suffrage.

PRODUCTION.—Mining, cotton, metal work, agriculture, forestry and stock raking are the principal industries, the chief crops being rys, wheat, cata, barley, potatoes, and sugar-best; the live stock includes cattle, horses, sheep, and pigs. There are valuable coal mines in Upper Silicals Resign Poland. and Little Poland. Silesia, Russian Poland, and Little Poland (Galicia): zinc, lead ore, mineral and potassium salts, and in Galicia (Boryslaw) are famous oil fields. The chief manufactures are textiles, those of minor importance being machinery and metal works, chemicals, and leather. The exports in former years were principally agricultural produce and textiles, the imports being raw wool, cotton and jute, woollen and cotton goods, and machinery.

DEFENCE. - In Nov., 1919, the war strength of the Polish army was \$50,000 all ranks, with a reserve of 400,000. When the various causes of conflict have disappeared, it is not anticipated that the Republic will require a large army, A small navy, for coastal defence, is projected,

EDUCATION .- Education is compulsory and free, and there is considerable voluntary effort in addition to the work of the State. Secondar education is conducted on a high level, good attendances, and there are universities at Cracow (founded 1364), Warsaw, Lwow, Poznan, Lublin, and Wilno; Polytechnics at Warsaw and Lwow, and an Academy of Science at ('racow

COMMUNICATIONS .- There are about zz,or miles of railway and over so,oco miles of telegraph line, with well-developed telephone graph fine, with well-developed telephone systems in all the large centres. Over 4,000 miles of navigable waterways exist on the Vistula, Warta, and Pilica, of which about 1,100 are navigable by steamers. The free city of lands is within the Polish Customs area, free transit

is within the Polish Customs area, free transit for Germany being guaranteed.

Finance.—The Budget for the g mouths ending March 2s, 1200, gives the revenue \$5,550,000,000 Polish marks, expenditure \$5,550,000,000 Polish marks, expenditure \$5,550,000,000 Polish marks, expenditure \$5,550,000,000 Polish marks, expenditure \$5,550,000,000 Polish marks, in the control of the second polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish polish p

and g milliards Austrian kronen (total of about ag milliards Polish marks). The Polish mark has been adopted at the ratio of 70 Galician hydres — see Polish marks.

The capital, Warsaw, on the Vistula (which is spanned by Four magnificent bridges) contains many fine buildings; its population in 1914 was about Res. see, and in 1919 about 1,000,000. Other laster towns are Left (see my the capital of the

lage towns are Lodz (450,000), the cantre of the textile industry; Posen, at the confluence of the Warts and Cybins rivers (160,000), Cracow, on the Vistula (170,000), Bialistok (110,000), and Somowice (100,000)

Gordon Square, W.C. 1 Vice-Consul (London), Maj. M. C. V. Hurst, Queen Aune's Mansions, St. James's Park, W.z. Portugal lies in gy"-4s" 8" N. lat and 6 "sy"go go W. long., being 56 miles in length from
N. to S., and averaging about see in breadth
from E. to W. Continental Portugal contains from S. to W. Continental Portugal contains an area of 5,395,393, and the Portuguese Colonies a total area of 804,841 square miles, with a popu-lation estimated at 9,493,500. The Acces and Madeira are reparded, not as culonies, but as a part of continental Portugal. The ighicf predacts are wheat, barley, cats, maine, flax, heatp, and the vine in elevated tracts; in the lowlands, tros. offers, present, largons, citizens. rishds, rice, olives, uranges, lenons, citrons, s, and almonds. There are extensive forests oak, cheesnut, sea-pine, and cork, the cuiti-tion of the vine and the olive being among

the chief branches of industry; the rich red wine known to us as "port" is shipped from Oporto. Its mineral products are important copper, lead, tin, antimony, coal, manganese, iron, slate, and hay-salt, which last, from its hardness and purity, is in demand. Its manufactures consist of gloves, silk, woollen, linen, and cotton fabrics, metal and earthenware goods, tobacco, cigars, &c. The exports consist to the extent of so per cent. of wine, which is the chief industrial product of the country, others are cork, cattle, copper-ore, fruits, oil, sardines, and sait The imports are manufactured goods hardware, cotton and woollen stuffs, machinery, wheat, sugar, dried fish, coal, &c. The commercial manne (rgrs) numbered see steam and ros sailing vessels, with a tourage of 122,726 In 1918, 5,866 vessels, of 3,284,928 tons, entered the ports of the Republic. Railways 1.854 unles in extent were open for traffic in 1913, and there were 5.945 miles of telegraph line in 1913 For many years the national income was considerably loss than the expenditure; this deficiency has added to the national debt.

Defence - Service in the militia is universal and compulsory. The peace effective is about and computatory. Ine peace energive is accou-as, occ. War strength, about 150,000. The Navy consists of r coast-defence ship, 4 pro-tected cruisers, some old pattern gunboats, 4 destroyers, and 2 submarines and 4 gunboats of the Herbaccous limiter type, acquired in England (1920), manned by about 4,898 sailors.

Education is free and nominally compulsory between the ages of 7 and 25, but is not strictly enforced, and over 75 per cent. of the population above 7 years old are illiterate Secondary education is conducted in State lyceums. are also military, naval and other special schools. The University of Coumbra (1291) had 1,100 matriculated students in 1910.

Rumania is a kingdom of South Eastern Bouses Revenue, 1940-11, Leason; imports, 1940-101, Leason Rumania is a kingdom of South Eastern Europe in the classical Dacia, the territory roughly defined by the three great rivers Daimbe, Africa, have an area of 1,475 equare miles and a population of 1940-000. Revenue, 2999-100, 1990-100. Theisa, and Dniester, whose central point is the ine of the Carpathians. The territory in known as Wallachia, Moldavia, Researabla, Ballovina, Crisona-Maramment, Transpivania, with part of the Banat and of the Dobrudia. The Africa, has an area of 14,000 aquare miles and a kingdom has its origin in the union of the

Danuhian principalities of Walachia and Mol-Januarum principalities of wassous and Activas (and the addition thereto of a strip of Southern Bessarable) under the Treaty of Paris (April, 1881). The principalities remained an integral part of the Turkish Empire until 1888, when Prince Alexander John Cura was elected ruler under the superainty of the Porte. Prince Curs abdicated in 1866 and was succeeded by Prince Charles of Hohenzollern-Sigmaringen, in whose successors the crown is now vested. By the Treaty of Berlin (July 13, 1878) the new Principality was recognised as an independent State, and part of the Dobruja (which had been occupied by the Rumanians) was incorporated in the Principality. On March 27, 1881, the former Principality was recognised by the Great Powers as a Kingdom. Rumania is not a "Balkan" State. She took no part in the military operations of the Balkan League against Turkey in segs-sp, and her unexhausted military power secured for her a readjustment of her south-eastern (Dobruja) frontier at the expense of war-worn Bulgaria. In the War of spa-sps, Rumania fought on the side of the Allies from Aug. 27, 1916, and after many vicissitudes (due mainly to the sudden collapse of the Russian Armies in 2927), she emerged in triumph at the cessation of hostilities between the protagonists. Her territories were greatly increased as a result of the War, and the ante bellum area of the Kingdom (83,000 sq. miles) was more than doubled by the inclusion within its borders of Remarable, Transylvania, Bukovina, and part of the Banat of Temesvar. The area of the enlarged Kingdom of Rumania may thus be entimated at manale sq. miles, and the rest population of g.ese,cee has been increased to 27,000,000. The dominating religion is that to sy,coo,coo. The dominating religion is that of the Greek (Orthodox) Church, but there are many Jews, full political rights being accorded

GOVERNMENT .- The government is that of a Constitutional Monarchy, the legislative assembly consisting of a Senate (56 members) elected for 8 years, and of a Chamber of Deputies (362 members) elected for 4 years by universal suffrage, provision being made for the proportional representation of minority races. The executive is entrusted to a council of

PRODUCTION -The soil of Waiachia, Bessarable, and Moldavia is among the richest in Europe. The wheat crop for 1919 was estimated at 7,000,000 quarters (of 480 lh.). The agricultural produce consists of wheat, maise, millet, harley, rye, heans, and peas. Vines and fruits are abundant. The fertile plain of Transylvania yields large crops of maize, wheat, rye, osterials yields seeke crops or maise, wheek, Tyo, ceats, flax, and hemp, and the rich lands of Bessarahia produce wheat, maise, harley, flax, tobacco, water melons, fruit, and grapes. Agriculture and sheep and cattle raising are the principal industries of the kingdom, but the climate of this part of South-Eastern Europe is the Constituents of the American Market Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the Constituents of the of the Continental character, with intense winter cold and summer heat, and flerce summer winter cold and summer heat, and herce summer droughts sometimes defeat these principal industries. The forests of the mountainous regions are extensive (17,582,92 acres), and the timber industry is important. The country is rich in minerals, and produces petroleum, sait, coallignite, iron, gold, and mics. Manufactures are in their infasor, and the imports are chiefly the manufactured goods of Western Burope; the

exports consist principally of wheat, barley, maise, cats, petroleum, timber, catéle, selt and hides. All estates over 1,333 acres have been expropriated and divided among the peasants.

DEFENCE—Service in the Army is universal

and compulsory. In the War of age-ages over geness all ranks passed into the Armies of Eumania, and of this number over ag per cont. were killed or returned as "missing." At the resurgence of Nov. 1918, an army of 400,000 was again in the field. This force was the deciding factor in the Rumano-Hungarian question, and it drove the Bolshevik dictator (Bela Kun) into exile from Buda Pest. There is a small Navy

on the Black Sea (30 vessels) and on the Dannbe. EDUCATION is free and nominally compulsory. EDUCATION is free and nominally computsory, there being 19,374 schools with 1,622,795 in attendance. Secondary schools are well attended. There are also special schools and Universities at Bucharest, Jasey, Cinj, and Cernauti. A Government High School of

Commerce was opened in 1913.
COMMUNICATIONS.—In 1913 there were about 7.131 miles of railway open for traffic in the whole kingdom. There are 19,715 telegraph and telephone offices. The mercantile marine consists of about 200 steamers and 600 sailing vessels. The Black Sea port of Constantsa (Dobruja) is linked with the interior by a railway. An International Commission, exercising sovereign powers over the navigation of the Danube. has its seat at Galatz.

The area of Soviet Buscle cannot be stated

The area of Soviet Bussia cannot be stated with accuracy, owing to the ebb and flow of the various conflicting forces. It may, however, be estimated at a second serious conflicting forces are miles (with a population of about accesses square miles (with a population of about accesses square miles (with a population of about accesses) East of the Ural Mountains; and at accesses aguare miles (with a population of about accesses accessed and accessed to the Ural Mountains. Prior to the War of spec-8 the Resease Empire of the Tar Nicholas II. covered more than a gas-see acquare miles, with a population of about algester miles, with a population of about algester miles, with a population of about algester miles, with a population of about algester miles, with a population of the Empire. Republics of Ethonia, Latina and Lithuania, the Southern Republics of Forces, and the Don, the Cancasian Republics of Kubanand Azurbeigen, and the Emsian portion of the Rapublic of Armenia, while the States of Khies and Bothars were dependencies of the Empire.

The Central Government of this vast area

The Central Government of this vast area as an absolute autocracy, the country being regarded as the estate of the autocrat and the public revanue as his private income, from which the expenses of administration were met. Reforms of various kinds were introduced from Reforms of various kinds were introduced from time to time. The peasants, who constituted gap per capt. of the inhabitants, were freed from the condition of sarfdom in 18st by the Taar Alexander II., and land was allotted to them in communal ownership. After the disasters of the Russy-Japanese War of 1894—1895 the Taar Nicholas II. published a rescript foreshadowing a constitutional form of government. In 1895 the imperial Dama (parliament), elected under the tentative constitution, was opened by the Taar, but it possessed little authority and its recommendations were usually ignored, while it was lieble to be dissolved at the will of the Taar. was liable to be dissolved at the will of the Tsar. The government in force at the outbreak of the the government is force at the outbreak of the War in sage was "Constitutional" in name alone, as the limits to the power of the ruler were subject to the possibility of an immediate and complete resumption of the former auto-cracy, at the will of the autocrat.

Local Government, on the other hand, was highly developed. In the rural districts (containing 8 per cent of the imbeliants) the village communities elected comming under the presidency of a starouta (mayor), villages being grouped into provinces and thus into governments, with larger elective comolis for the administration of local affairs. Combined with this system of village communities was a highly organised system of co-operative trading, the villagers being grouped by voluntary association into districts, usually corresponding with local into districts, usually corresponding with measure-government area. The produce of the soil was disposed of in return for manufactures obtained by the Society and distributed at the Co-opera-tive shops. Municipalities were also adminis-tered by district councils such; the presidency of a mayor, but in many calculation; sutherity.

was overshadowed by the superior authority of

the military governor.

Education was not widespread in the Tan's identification was not widespread in the Tan's identification. The second only the most elementary instruction, and the attendance most elementary instruction, and the attendance in the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the se most elementary instruction, and the attendance was voluntary, while they were closed in rangle districts during the summer months. Secondary schools existed only is the great cities, and the cleven universities had only spece students of both sexes. Fully so per cent. of the peasants (i.e. yn per cent. of the people were fillerate. A rural starouts who could neither read nor write was in no way unusual, and accounts were frequently kept for the local branch of the Co-operative Society by the village schoolmistress or by the priest, the abacus being employed by the shopkeeper for simple additions of mubics and kopeks by means of moveable balls (of different colours) on a wire frame.

For many years a sullen undercurrent of unrest had been noticeable in Russia, particularly among the University students and the educated classes. The movement spread rapidly among the workers and peasants from about the year 1850, and was secretly organised in 1860 as the "Society for the Liberation of the People." The reforms originally demanded were reasonable and neither anti-dynastic nor revolutionary. They were resisted principally because they were regarded as premature. The impatient exregarded as premature. The impatient extremists endeavoured to hasten reform by violent means, and resorted to terrorism and assassination to achieve their aim, which was criticised as a desire to reduce rule to anarohy, and to substitute for existing authority "nothing," as expressed in their nickname. This Nikiliam was kept in check by a large force of Secret Police, whose methods were generally arbitrary and frequently inhuman, arrest on suspicion of membership of a secret society, or of sympathy with Nihilism, being followed by banishment for life or by penal servitude in the mines of Siberia

Involved in the War from Aug. 2, 2014, the military forces of the Taur fought against the armies of the Central Powers with varying success. On March 12, 1917, owing to the avowed hostlity of the Duma, the Tsar Nicholas II abdicated, but the auccessor nominated by him was not admitted to power, and a provisional government was set up under Prince Lvov. On government was set up under Prince Lvov. On hay se, sear, this administration was taken over by a Republican Cabinet under Alexander Kerensky, but Kerensky falled to establish a settled government. Administrative chaos was followed by a debade in the field, and the armies of Russia, hitherto a bulwark of the Allied cause, retreated in panic from the battle line, many of the soldiers abandoning their arms and returning to that homes. returning to their homes

On Nov. 7, 1927, a military revolution transferred the power from the Republican Cablact of Kerensky to "People's Commissioners," appointed by an "All Bussia Congress of Soviets," the Soviets being Councils of delegates elected by workmen, soldiers and pessants throughout the country.

The opposing theories of government were

The Fuar Micholas II, with the Frantiss, Transwitch Alaxis (heir apparent), and the Frincesses (and such fitthful adherent, as remained to them), were corrected by order of the Leyensky (tablest, Ting were sithe-quently captured by the Schlevith add on July 26, 300, the Fuar and his family and attentions were betcheved in odd blood.

known as "Maximalist" and "Minimalist" rule, the Soviets claiming to represent the Maximalists or largest class, the Republican Cabinet being accused of representing only the bourgeoists, or smallest (Minimalist) class. The Maximalists or Bolaheviki' (Bolaheviki' = majority) professed to act in the name not only of the people of Russia, but in harmony with a projected "Federation of the Projektsylets of the Month State of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Month of the Mont the Projetariates of the World."\*

Meanwhile, the armies of the Central Powers advanced victoriously into Russian territory, and after granting an armistice they imposed on the Soviet government the crushing conditions of the Treaty of Brest Litousk (March a, 1918), which remained effective until the military strength of Germany and Austria was broken by

the Allies

The Bolshevik regime had been fostered by the Central Powers and was opposed by the Allies, who sent such naval and military help as could be afforded to various bodies who were stemming the tide of Bolshevism in Siberia (Admiral Koltohak), South Russia (Denikin), and North Russia (Tohaikovsky), mainly with a view to create a diversion on the eastern German-Austrian front, and in response to a declaration of war by the Soviets against governments which were held by them to be representative of Minimalist rule and of the bourgeoisie they had

pledged themselves to eradicate.

In zero the Soviet armies met with almost universal success in their encounters with the forces from Siberia. Koltchak was driven across the Urals and his armies were dispersed, the leader being captured and put to death. Local resistance in North Russia was strengthened by Allied troops (principally from Great Britain and U.S.A.), and help was also rendered to General Denikin in the south. But the victorious close of the European War caused a growing reluctance among the Allied Nations for further military adventures, and the rein-forcements sent in 1918 were withdrawn during the autumn and winter of 1919 from Archangel and Murmansk in the North, from Odessa in the South, and from Vladivostok in Siberia. The withdrawal preceded a collapse of the "White" resistance to the "Red" (Bolshevik) armies, and by the close of the summer of rese the greater part of Siberia and the Archangel government were included in Soviet Russia. In some war broke out between the Republic of Foland and the Soviet armies, in conjunction with operations under General Wrangel, the successor of Denikin in the South. After initial successes the Polish armies were driven back and Warsaw appeared to be in imminent danger of capture, when a dramatic recovery saved the Polish capital and brought about negotiations for peace on terms favourable to Poland.

Soviet Russia is governed by the President and Council of the Peoples' Commissioners, nominally for the benefit of the People of Russis; but the

Bolshevik propaganda work has been extensively carried on in Europe and the United States, but has againd few adherents in democratic countries. The p. inclinal agency for Bolsheyik propaganda abroad is the p. inclinal agency for Bolsheyik propaganda abroad is the international countries. so-called Holshevik, or majority, rule is in effect that of a misority, and in is upheld by an army which contains at least to per cent, of foreign (largely Chinese) mercentries, by methods in every way as undemocratic as those of Thardom, "Liberty" is dismissed as a Bourgeoisis, and freedom of the Press and free speech arp similarly regarded, while the Bodial Hemocratic (Menshevista) and the Salvation Army are, prescribed as "Counter-Revolutionary," Soviet rule has hitherto been accountanted by indicar interior. has hitherto been accompanied by indiscriminate slaughter and outrage; it has not yet been recognised by any of the Allied Powers. Before the War the annual revenue of the

State was about 3,500,000,000 roubles (at the 1914 Tate of exchange 9:455 roubles = £s sterling).
The Soriet budget of 1919 showed a Revenue of
20,349,000,000 roubles for the first six months of the year, and an expenditure of go, 103,000,000 roubles, a deficit for the six months of 29.754,000,000 roubles. The State debt amounted. in 1914, to 8.811.386,one roubles (£931.600.000), against which there was a gold reserve in the State Bank of 1,673.880,one roubles (£931.600.000). In Oct. 1917 the State debt amounted to 38,300.000,000 roubles, including a number of loans contracted abroad, Great Britain being a creditor for the amount of £571,000,000 lent to Russia from Sept. 1913 to Oct. 1917. All internal and external obligations of the State have been repudiated by the Soviet government. In Sept. 1930 particulars were published of an agreement hetween the British Government and Soviet Russia for resumption of trade relations, and in this agreement (so far as its details were made known) the repudiation of the public debt appears to be condoned by the British Government. The internal debt has been increased by many millions of roubles monthly by the indiscriminate issue of paper money. Before the War of 214-8 the paper rouble was worth about as.; on Nov. 8, 1980, the exchange in South Russia was quoted at 135,000 paper roubles. £ 1 sterling and the gold to rouble piece at 200,000 paper roubles. All banks and financial and trading concerns and shipping enterprises have been declared to be the property of the prole-tariate, and the balances and credits have been dissipated by theft or neglect. Private owner-ship of land has been abolished and all real estate has been declared proletariate property.

The harvest of rgrs produced ar.478,322 tons of wheat, as.842,950 tons of rye (the staple food of the peasants and workmen), 10,321,593 tons of the peasants and workmen), 20,321,593 tons of barley, 18,569,386 tons of oats, a,364,006 tons of millet, a,862,206 tons of maize, 37,399,474 tons of potatoes, and 24,465 tons of tobacco; the live stock included (1914) 34,053,000 cattle, 78,873,000 sheep, lambs and goats, 24,995,000

pigs, and 24,973,000 horses.
In 1913 the mineral output of Russia was 59,39,000 tons of coal (principally from the Donetz basin), gold, platinum (337 poods of 361b.), pig iron (7,400,000 tons), copper, quick-silver, sait and lead.

In 1914 the Imports into Russia were valued In 1914 the imports into Russis were valued at 1,100,000,000 coopens resible, and the Exports from Russis at 96,000,000 roubles, a total trade (at 948 roubles=£1) of £217,48,000, the chief imports from the United Ringdom being machinery and cost, the exports to the United Ringdom being machinery and cost, the exports to the United plant of the Company of the Edward Russis and the Company of the Edward Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Russis Rus

There were (1913) of \$30 miles of railway with a gross revenue of \$125,823,000, 125,60 post offices carrying a,623,000,000 lettern, &c., and 476,279 miles of telegraph wire. The principal railway lines are the main European network railway lines are the main European network from Petrograd, through Moscow to Astrakhan and across the Urals via Perm, Ufa, Samara and Saratov, with northern extensions to the Kole Peninsuh and to Archangel and running south-wards to the Baltic, the Crimes and the Caucasus; the Trans-Siberian Line from Chelya-biusk, on the Ural frontier, to Omsk, and round Lake Balkal to Chita and Stryetensk. From Chite the line grosses the Manchurian frontier Chita the line crosses the Manchurian frontier cas the Eastern China Railway) to Harbin and Viadivostock, where a northward extension runs to Khabarovka. The projected Amur Railway, when completed, will connect Stryetensk with Khabarovko, and the Trans-Siberian line will thus connect the western and eastern limits of Bruste on Provide terminal Transof Russia on Russian territory. The Trans-Udspian Railway runs from Krasnovodsk (opposite Baku) to Askabad, Merv. Bokhara, Sama-kand, Khokand and Audijan, with a see-mile branch from Merv to Kushk (near Herat) on the Afghanistan border. The Orenburg-Tashkent Line, from the European boundary, across the Kirghiz Steppe to Kazalinsk, Perovsk and Tashkent, whence a short line connects with the The Trans-Caucasian Trans-Caspian system. Line runs through the autonomous Republics of Georgia, Azerbaijan and Armenia, from Batum and Poti, on the Black Sea, vid Tiflis, to Baku, on the Caspian, where it is met by the European system of Rostov on the Don. From Tiflis branches run to Kars, and via Erivan to Mount Ararat on the Armenian frontier, and to the Persian frontier at Julia. There are in European Russia about 150,000 miles of navigable rivers and canals and lakes, of which total about onefourth of the distance is navigable by steam vessels, a further eighth by sailing vessels, and vessels, a turnier essination of saming vessels, mearly one-third by ratts. In Asiatic Russia there are 85,000 miles of waterway, of which so,000 miles are navigable. Some 175,000 persons were engaged in the traffic (1910), the vessels numbering (in 1910) 4,000 steamers and 23,000 sailing vessels. In 1906 the ships and rafts carried over 4,000,000,000 tons of goods.
The principal ports of Soviet Bussia are Petrograd and Kronstadt on the Baltic; Archangel

on the White Sea, and Ekaterinsk in the Kola River (Murmansk); Astrakan at the mouth of the Volga (on the land locked Caspian Sea); Vladivostok and Nicolaieffsk on the Pacific;

and Petropaulovsk in Kamtchatka.

On March 14, 1918, the seat of Government was transferred from Petrograd to Moscow, was transferred from Petrogram 20 moscow, which had a population in 1914 of about 1,900,000, reduced by famine, assassination and misrule to about 700,000 in 1900. PETROGRAD (before the War "St. Petersburg") the former Capital, founded by Peter the Great on the banks of the New in zysz, had a population in spa of s,oco, ose (estimated at z,oco, oco in spac). Other centres are Saratov (sec, oco), Kazau (zyo, oco), Astrakhan (130, oco), Tula (133, oco), Minsk (110, oco), Nijai Neygorod (sec, oco), Voronezk (90, oco), Orei (98, oco), Vitebsk (35, oco), Kurak (36, oco), and Tarcelary (36, oco). Archangel had about 48, oco inhabitants in ross.

In various districts there are organized Go-vernments, independent of Societ Russis, and in other parts there is organised opposition to

Social rule. The autonomous governments in

# AZERBAIJAN.

Azerbaijan is a Transcaucasian Republic on the south-western shore of the Caspian Ses extending from the Caucasus in the north to Persia in the south and from the Caspian on the east to Armenia and Georgia. The area is about 50,000 sq. miles, with a population estimated at 4 to 5 millions, of whom over 75 per cent. are Muhammadans.

The Capital is BAKU (pop. 250,000) on the ahore of the Caspian Sea, the centre of the petroleum industry. Baku is connected by railway with Batum (Georgia) on the Black Sea, via Tiffis, and with Moscow, via Rostov. Other towns Yelisabethpol, Derbent, Kuba and Shemakh Other towns are

The Republic has been formally recognised by the Allied Powers.

# THE DON.

The territory of the Cossacks of the Don. declared itself a Republic in Jan. 1918. Area about 63,000 sq. miles, population (1914) 3,700,000. The Republic covers the greater portion of the valley of the Don, and extends to the mouth of the river at the Sea of Azov. The largest town is Rostov on the Don (pop. 1914, 280,000), and the seat of government is at the former Provincial capital, NOVOCHERKASS (pop. 1914, 75,000). Ataman of the Don (Governor), General Krasnov.

#### ESTHONIA.

The most northerly of the Baltic provinces, is bounded on the N. by the Gulf of Finland, on the S. by Latvia, on the W. by the Baltic Sea and on the S. by Lake Pelpus and Soviet Russia (along a line roughly parallel with the eastern shore of the lake). The islands of the eastern shore of the lake). The islands of Dago, Osel and other smaller islands in the Baltic form part of the Republic. It has an area of about so,ecc sq. miles (within the boundary settled by agreement with Soviet Russia), with a population (sees) of shout r,Sec,ecc. A large portion of the surface consists of forests, moors, and small lakes. Agriculture is the chief industry, rye, cats, lealer and flar helps the chief crons, and barley, and flax being the chief crops, and dairy farming is carried on. There are important manufactures, including distilling, sugar refining, oil pressing, woollen, cotton, tobacco, cork, soap, and petroleum. The capital is REVAL (pop. 1914, 170,000) an important Pattic port, connected by railway with Petrograd; other towns are Narva, Hapsa, Pernau, Valk and Dorpat.

The government is administered by the Esthonian National Council, and has been recognised by the Allied Powers and by Soviet

#### KUBAN.

In Nov. 1918, anti-Bolshevik elements in the basin of the Kuban river, N. of the Caucasus and E. of the Sea of Azof, proclaimed a government under M. Sazonov at Ekaterinodar. The area includes the river basin, the N. slopes of the Caucasus to Elbruz (on the E.), the river mouth, and the coast of the Sea of Azov, and extends over about 36,500 sq. miles, with a population estimated in 1914 at 3,000,000. Under normal conditions the Kuban soll not only supports the inhabitants, but enables about one-third of the produce to be exported. The aim of the government is rounion with Russia under a Democratic Federal Government. ERATERINODAR (pop. 1914, 110,000); other towns, Novorossilak (pop. 1914, 70,000), Maikop (pop. 1914, 55,000), and Yeisk (pop. 1914, 53,000).

LATVIA. A Baltic Republic in the basin of the Dvina river and round the Gulf of Riga, practically co-extensive with the former Provincial government of Couriand, the area being about zo,ooc ad miles, with a population (1924) of about 20,000. Oct. 7, 1929, General Biskupski assumed office as Fremier and Becretary for Foreign Affairs.

The seat of government is RIGA, at the mouth the weak or governments as keep, at the mouth of the Dvina river, with an estimated population of syacos, other centres being Libau (100,000) and Mitau (10,000) on the Battic coast, and Dwinak (90,000) hear the Lithuanian frontier, in the south-east.

CAPITAL, Riga.
Chief of British Political and Beonomic Mission, Col. S. G. Tallents, C.B., C.B.E.

Ohief of Military Mission, Maj. A. H. Knomm D.L.O., O.B.E., M.O. Commercial Commissioner (Riga), Was, Peters. TITHUTANIA.

The former governments of Kovne and Vilna and portions of Gradno, Moghilev and Vitebsk were united in agas as the Republic of Lathuanis. The Republic is bounded on the R. by Latria, on the S by the German district of Konigsbess, Poland and Soviet Russia, on the E. by Soviet Russia, and on the W. by the Raitia dea, the test are included in the Republic heirs about total area included in the Republic being about 40,000 sq. miles, with an estimated population of 5,000,000. The future of the districts of Memel and Tilsit is to be settled by the League Memel and Thint is to be settled by any amount of Nations, as between Lithuania and its 9. neighbour, Poland. The seat of government is Villa, on the Villya river, a tributary of the Niemen (pop. 1914, 210,000) connected by railway with Riga (Latvia), Pstrograd, and Warsaw (Poland); Kovno, on the Niemen, had a population in 1914 of 25,000, other centres being tion in 1924 of 95,000, other centres being Grodno (60,000), Memel, on the Haltic (35,000),

Swalli (30,000), Menier, of the Batte (35,000), Swalli (30,000), and Shavli (30,000). CAPITAL, VILNA. President of the Lithuanian Republic, A. Smetonia (April 4, 1929). Lithunian Chargé d'Afaires (London), A. Tyszkiewicz. British Charge d'Affaires (Vilna), Lt. Col. R. B.

# TARTAR BASHKIR.

The former Provinces of Samara, Ufa, and Orenburg declared their independence in 1918 as the Tartur Bashkir Republic. Samara (capital, Samara ou the Volga, pop. 1914, 220,000) has a total area of 35,200 sq. infles and a population (1914) of 3,700,000; it lies to the E. of the Volga river and is largely agricultural, but includes iron-founding, tanning, brickmaking, and flour milling among its industries. Usa (capital Ufa, at the configence of the Ufa and Relata trivers, pop. 2914, 65,000) has an area of 47,200 sq. miles and a population (2914) of 2,000,000; it lies to the M.E. of Samara, and is largely agricultural and pastoral. Orenburg (capital, Orenburg on the Ural river, pop. 2914, 200,000), E. and S. E. of Ufa, is largely mountainous, but contribute the factural set and the contribute the facture to a salt of the contribute the facture to a salt of the contribute the facture to a salt of the contribute the facture to a salt of the contribute the facture to the facture to the salt of the contribute the facture to the facture to the facture to the facture to the facture to the salt of the contribute the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the facture to the f but contains also fertile low-lying tracts in which agriculture is extensively carried on. Orenburg has considerable mineral wealth which is practically undeveloped.

TAURIDA

In March sass the former government, of Taurida declared its independence as the \*Taurida declared its independence as the \*Taurida Republic.\* The area is za,pas sq. miles, with a population (see ) of see,ees, and the Republic is bounded on the N. by the Dnieper giver and the Province of Richterincelax, on the W. and S. by the Black Sea, and on the E. by the Sea of Asov. The soil is very productive, especially in its southern penthaniar, known as the Crimes (the ancient Tauric Cherachese). The capital is Simpercol (pop. 1924, 62,ees), other towns being Sevantopol (pop. 1924, 62,ees), other towns being Sevantopol (pop. 1924, 62,ees), Kertch (pop. 1924, 62,ees), Theodoxie (pop. 1924, 64,ees), Republica, Relivopol, and Perekop.

TEREE

In Sept. 1916 the Giscannasian Pravince of Terek proclaimed its independence. The Perek Republic has an area of about alloss at miles, and includes a population of about 1,000,000

The S, neighbour is Georgia, the Kuban Republic ites to the W., and the E, boundary is the Caspian Ses. The N. boundary is indeterminate, but the Republic extends over the basin of the Terek river towards Astrakan.

# TURKESTAN.

Tn Jan, and the former Russian Provinces of Ferghams, Syr-Daris, Amu-Daris, Samarkand and Semily schenisk, with a total area of about 4,20,000 at, miles and a population of about 7,000,000, declared their independence as the Republic of Turkstas. The territories of this Republic extend from the Aral Sea in the W. to the houndaries of the Ohinese Republic in the E., and between the River Chu and Lake Balkash on the S. The capital is TASHERED (pop. 1914, 1975,000), other large centres being Khohkand (pop. 1924, 1936,000), and Nashangan (pop. 1924, 90,000), and Nashangan (pop. 1924, 90,000), and Nashangan (pop. 1924, 90,000).

#### UKRAINE

On Nov. ss, sexy, the greater part of "Little Russia," consisting of the former governments of Chernigov, Kharkov, Kieff, and Poltava (with Eksterincelav and Kherson in "South Russia," and Podolia and Volkynia in "West Russia") was encouraged by Germany to declare itself independent as the Republic of the Ukraine. The new Republic was despoiled by Germany in 2017-28, and until August 2019 was overrun by Bolahevik forces, who were then driven from Odessa and the Ukraine by a rising of the inhabitants. The total area of the Republic is about 174,000 sq. miles, with a population of about 20,000,000. The chief town and seat of government is Kirzy (pop. 2014, 600,000), other large centres being Odessa, the great port on the Black Sea (with a population in regra of \$50,000), Kharkov (pop. rgr4, z60,000), Ekaterinoslav (pop. rgr4, z60,000), and Zhitomir (pop. rgr4, 80,000). The Ukraine is the great wheat growing district of Russia, and contains large deposits of iron ore and coah Agriculture is the principal industry, and there are large iron and steel works. Before the War of 1914-8 the exports from the Ukraine (wheat, sugar, hides, bristles and wool) were of the annual value of about £75,000,000 and the imports (manufactured goods and machinery) about £50,000,000. In March 1929 the Allies recognised the government of the Ukraine. In the autumn of 1919 the Republic broke off relations with the forces of Admiral Koltchak and General Denikin and hostilities ensued, with varying fortunes, between the Ukrainian armies under General Wrangel and the" United Russian "armies of General Denikin. A "peace" was concluded in Nov. spr., and in tone the struggle was continued with the armise of Soviet Russia, the trend of the struggle appearing to be entirely in favour of the "Red" Armies.

President of the Ukrainian Republic, Simon Petlura.

#### YAKUTSK.

In May real the vast East Siberian Province of Yakutak broke away from the Republic of Siberia and established a Republic of Yakutak. This sparsely populated area of x, xio, sg; ad miles contained in rera a population of less than management, the chief industry being hunting and trapping in the facest regions and agriculture in this 3. There is considerable mineral wealth.

The capital is YAKUTSK on the Lena river, the centre of the Siberian fur trade (pop. 2924, 20,000).

# SALVADOR, Republic of.

President (1919-1913), Señor Jorge Melendez, assumed office March 1, 1919).
Vice-President, Br. Alfonso Quinonez Molina.
Interior and Public Works, Dr. Miguel Molina.
Foreign Afairs, Dr. Juan F. Paredes.
Frinance, José E. Suay.
War and Marine, Dr. Plo Romero Bosque.

Chargé d'Afaires and Consul-General in London, Dr. Arturo R. Avila, 7, Union Court, Old Broad Street, E.C. 2.

The Republic of Salvador extends along the Paoific coast of Central America for 170 miles, with a general breadth of 43 miles, and contains an estimated area of 7,223 square miles, with a population estimated at 1,27,336. It is divided into 14 departments.

Salvador was conquered in 255 by Pedro de Alvarado, and formed part of the Spanish viceroyalty of Guatemala until 252. In 254 the Republic broke away from the federation of Central American States. The constitution rests upon the fundamental law of 2564 (revised in 256), the President and Vice-President being elected for four years by direct vote of the people, the President being ineligible for a successive term in either office.

There are distinct areas in the low alluvial plains of the coast and the interior plateau, with a mean elevation of about s,300 feet, broken in many places by volcanic cones, of which the highest are Santo Ana (8,300 feet) and San Mignel (7,130 feet). The lowlands are generally hot and unhealthy. There is a wet season (winter) from May to October, and a dry season (summer) from November to April. Earthquakes are frequent, and on June 8, 1917, a series of seven shocks nearly destroyed the capital, and ruined the towns of Santa Tecla, Armenia, and Apopa. The volcano on Mount Salvador was actually in eruption in Oct. 1917, and a severe earthquake was experienced on April a8, 1919, doing great damage to the capital.

The principal river is the Rio Lempa, which rises in Guatemala and flows into the Pacific, with tributaries in the Santa Ana, Asalguate, Sumpul and Torola, the Lempa being navigable for most of its course by small steamers. In the eastern districts the Rio San Miguel rises near the Honduras boundary and flows into the Ray of Fonseca. The western boundary crosses the Laguna de Guija, the greater part of which lies within the borders of Salvador, and in the centre of the Republic is the large volcanic lake Hopango, with a smaller lake, Coatepeque, further west.

The chief industry is the cultivation of coffee; sugar is also grown and indigo, rice, &c., are important crops. The principal exports are coffee, indigo, tobacco, sugar, silver, baisam (known as baisam of Peru), rice, hides, cedar, and fustic. The chief imports are cotton goods (from the U.S.A. and U.K.), and leather, hardware, chemicals and motor cars.

A British railway nearly see miles in length connects. Acquitle with the capital and Santa Ana, the coffee centre; and another line is in-engree of construction from the port of La Union to the capital. This has been completed to San Vicente (san miles), whence a motor service to Gan

Salvador has been organised. The principal ports are Acaptula, La Libertad and La Union. There are uso post-offices and sug telegraph offices, with 3,000 miles of wire.

The language of the country is Spanish.

# SAN DOMINGO. See Dominican Republic. SAN MARINO.

A small Republic in the hills near Rimini, on the Adriatic, founded, it is stated, by a pious mason of Dalmatia in the 4th century, and governed by a Council of 60, of whom two are elected as Regents for six months (x April and x October), being thereafter ineligible for office for three years. The area is 33 square miles, the population za.e36. There is an army of about x,000. The city of San Marino (pop. x,000 couples the alope of Mount Titan, and has an impregnable castle, where King Berengar of Lombardy took refuge in 450 AD., a fine church and Government palace, and a theatre. Agriculture and viticulture flourish.

British Consul-General for San Marino, M.

Carmichael (Leghorn).

Consul-General for San Marino in Great Britain,
Commendatore Arthur Serena, J.P., F.R.G.S.,

34 Leadenhall Street, E.C. 3.

public schools and 4.227 schools of all kinds, attended by ras, soo children. A University is in process of organisation. Banglack is the only much-frequented port. Over two-thirds of Siamese sea-borne trade, which centres at Banglock, is with the British Empire, and is Bangkek, is with the British Empire, and is largely in the hands of British firms or of Chinese trading from Singapore and Hong Kong, German shipping, which had held the lead in tonnage for many years past, has ceased to visit Bangkok since August, 2012, and, as a consequence, there has been a large increase in Norwegian and British shipping. The chief products of Siam are rice, teak, and tin (from Lower Siam). The area under rice is being much enlarged by irrigation. There is a large number of rice mills, mostly in or near Bangkok. Thetesk industry in the great forcets of N. Siam is mainly in English hands. In 2012-29 rice constituted Sr per cent, and teak 24% per cent, of the tuted \$1 per cent and teak \$1/2 per cent. of the exports from the port of Bangkok; while hides and marine products are also exported in considerable quantities. Among imports are treasure, cotton goods and yarn, silk goods, provisions, gumy baga, kerceene, sugar, oplum, metals and metal wares, machinery, dc. The general tariff rate is 3 per cent. ad velorem. Burms imports tesk and cattle overland from Siam, and exports thither cotton and silk goods, &c. Except tin, wolfram, rubies and sapphires, there are no impor-tant mineral products as yet. The King is an absolute monarch, and appoints his successor. There is an Executive Council of Ministers and a general adviser in Foreign affairs (usually of American nationality), and, since x805, a Legislative Council of State, consisting of the Ministers, eight royal princes, and over twenty members appointed by the King, who has an absolute power of veto. A number of English, French, Italians, Danes, and Americans are employed in the various State departments. Siam has an army of nearly se,coo men, and a few small gunboate; compulsory military service has been introduced. About z,see miles of railroads (mostly State-owned) are now open for traffic. Railways from Bangkok run to Korat (see miles N.E.), Nakawn Lampang (400 miles N. of Bang-kok), Petru (40 miles E.); while the northern line is being extended to Chiengmai, and the southern line to Trang, on the west coast of the Malay Peninsula, was open to traffic in October, 2916. In July, 2918, the southern line was com-pleted to the Kedah horder where junction with the Federated Malay States Railway system was effected. There is through railway connexion between Bangkok and Penang and Singapore. Good roads are few. There are 3,000 miles of telegraph lines.

The ourrency is the silver tical, worth about is. 65/d. The Mint was closed to the free-coinage of silver in Nov., 1908. In N.W. Siam the Indian rupes is mose or less current.: The Government issues notes,

A Kingdom situate in the south-west of Europe, hetween 36°-43° 45' N. lat. and 4° 25' E.—9° 20' W. long., bounded on the south and east by the Mediterranean, on the west by the Atlantic and Portugal, and on the north by the Bay of Biscay and France, from which it is separated by the Pyrenees; and occupying the larger portion of the great Iberian Peninsula. Its coast-line extends 2,327 miles—72s formed by the Mediterransan and fog by the Atlanuc and it comprises a total area of 196,700 English square miles, and an estimated population, in Jan. 1914, of so, 356,000 -ross to the square mile. The interior of the peninsula consists of an elevated tableland surrounded and traversed by mountain ranges -the Pyrenees, the Cantabrian Mountains, -the Fyreness, the Cantabrian Mountains, the Sierra Geaderrama. S. Morens, S. Novada, Méntes de Tolede, &c. The principal rivers are the Bears, the Early, the Guadina, the Guadarquiser, the Ebra, and the Minho. The Constitution upon which the present Government is formed is dated a June, 1896. The principal teems are Madrid (pop., 655,796), Barcelons (Sargary), Valencia (244,594), Swille (184,44), Malagas (194,595), Murcia (194,595), Sangoona (195,595), Carthagena (196,595), Billeso (194,195).

and San Sebastian (58,052); and there are zg other and can some special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special special s country is generally fertile, and well adapted to agriculture and the cultivation of heat-loving fruits—as olives, cranges, lemons, almends, pomegranates, and dates. The agricultural products comprise wheat, barley, maize, oats, rice, with hemp and flax of the best quality. The vine is cultivated in every province; in the south-west, Jerez, the well-known sherry and tent wines are made; in the south-east, the Malaga and Alicante. The principal articles imported are raw cotton, spirits, fish, wheat and flour, sugar, coal, timber, woollen manufactures, machinery and railway materials, hides, &c. The principal exports are wine, copper and copper ores, lead, iron ores, olive oil, raisins, oranges, cork, esparto grass, wool, salt, quicksilver, grapes, &c. Trade was for many years mostly confined to France and Great Britain, but Germany had, before the war, become a serious competitor, while the United States and Belgium share an increasing proportion of Spanish trade. Home manufacture is protected by high customs duties.

In 1930 there were 9,430 miles of railway open, and 69,400 miles of telegraph line. The seagoing mercantile marine on Jan. 1, 1919, consisted of 474 steamers and 448 sailing vessels over 50 tons, of a total tonnage of 766,208 tons. In 1919, 14.811 vessels of 9,520,196 tons entered and 15,358 vessels of 10,017,056 tons cleared at Spanish ports

Defence -The authorised peace establishment, including forces in North Africa, was, in 1920, 20,000 officers and 218,000 men. War strength: Field Army, first line, 300,000. Second line.

The Navy is being rebuilt and reorganised. and consists of 3 (zg.700-ton) battleships and 3 modern crusers, with z old battleship and 4 old cruisers; there are also so torpedo-boat destroyers, a4 torpedo-hoats, 4 submarines, and 10 gunboats.

Education, Primary, is nominally computery and mainly free, and is State-aided, the public schools being maintained by local taxation. Many private schools are under elerical control, and supervision is lacking Secondary High Schools are in each province, but the curriculum is defective. Universities at Barcelona, Granada, Madrid, Salamanca, Santiago, Salagossa, Seville, Valencia, and Valladolid.

Madrid, 1,150 miles, trausit, 45 to 50 hours.

The BALKARIO ISLES are an archipolago of 15 islands in the Mediterranean, the largest being Majorca Minorca, Iviza, and Kormentars; the total area is 1,935 aquare miles, with a population (2910) of 325,703. The archipelago forms a province of Spain, the capital being Palma in Majorca.

CEUTA, which forms part of the Province of Cadiz, is a fortified post on the Moroccan coast, opposite Gibraltar. The total area is 5 miles, with a population of about 23,000.

The CANARY ISLANDS are an archipelago in the Atlantic, off the African coast, consisting of sislands and 6 uninhabited islets. The total area is 2,807 square miles, with a population of 419,809. The Canary Islands form a Province of Spain, the capital being Sauta Cruz in the island of Feneriffe.

# SPANISH COLONIES.

The Spanish Colonies (exclusive of Ceuta and the Canary Islands, which form an integral part of the kingdom) consist of certain settlements and islands of Western Africa, with a total area of close on 88,400 square miles, and a population exceeding 275,000.

# Fernando Po.

FERNANDO Fo (Fenando Póo) lies in the Bight of Biafra in 3° 2° N. lat. and 8° 48° E. long., about so miles distant from the west coast of Aftica, and is a mountainous island (Pico de Santa Isabel, 10.800 feet), with forests of oil palm, chony, mahogany, and oak, and sugar-cane, cotton, and indigo. Cocoa, coffee, sugar, tobacco, vanilla, and kola nut are cuitivated, and large quantities of cocoa and other products are exported. The capital is Basile, and the largest town Port Clarence (2, 300 inhabitants). Dependencies of the island of Fernando Fo-ase:—

Annobon Island (Anno Bom), in the Gulf of

Guines, in 2° as' 8. lat. and 30° 33' E. long. The roadstead at the capital (San Antonio de Baia) is much theoreused by passing vestels, which also obtain water and vegetables from the islanders.

Corisco Islands, comisting of Corisco, Bana, Elobey Grando, and Elobey Chico, lie in Corisco Bay, and export ebony, logwood, and other forest produce.

Fernando Po-British Vice-Consul, A. C. Reeve (acting).

#### Rio de Ore and Rio Muni-

RIO DE ORO is a possession on the north-west coast of Africa, between Cape Bogador and Cape Blanco, or approximately between sxº so'-a6° N. lat., and extending eastwards to about 130 W. long. The territory is part of the waterless Sahara, with a sparse population of wandering Muhammadan Arabs There are valuable fisheries off the coast, and cattle, sheep, and camels

are brod where vegetation permits.

Rio Muni (of Spanish Guinea) is a coastal settlement of West Africa between Cameroon and French Coago (x N.-x² xs N. lat.), ettending about sag miles biland. The inhabitants are Bantu tribes, and the principal settlements are at the mouths of the Muni, Benito, and Campa rivers, and at Bata on the coast. Cocua, coffee, and hananas are cultivated, and rubber, palm oil, palm keruels, and other forest produce are exported.

# Spanish Morocco.

On the Moroccan seaboard are certain Spanish presidios, formerly used as convict settlements.

Melilla is a town on a rocky promontory of the Riff coast, connected with the mainland by a narrow isthmus. The population is 27.565, and the settlement exports goatskins, eggs, and becswar, and imports continued to the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of the settlement of th beeswax, and imports cotton goods and pro-VISIOUS.

Albucemas is a settlement on the bay of that name, and includes six islands.

Peton de la Gomera (or Penon de Velez) is a fortified rocky islet about 40 miles west of Alhucemas Bay

The Chaffarinas (or Zaffarines) are a group of three islands near the Algerian frontier, about s miles north of Cape del Agua; population about z,ee

Ifm, on the Atlantic coast of Morneco, about roo miles south of Agadir, affords access to the interior of south-west Morocco, but has no great trade at present.

Imports to Spanish Colonies from U.K. (1918)

Exports from Spanish Colonies to U.K. (1918)

# SPITSBERGEN.

The Spitsbergen ("Pointed Mountain") Archi-

. The spailing of the name with a ".s" is a correction of the game riame.

Bear Island (70 square miles) 127 miles to the S.; with many smaller islands in the neighbourhood of the main group.

nood of the main group.

The spittsbergen whate fishery was opened up by Henry Hudson, the navigator and explorer, in the early years of the syth century, and in type as Polar expedition under John Phipps (with Nelson as ship's coxwain of H.M.S. Carcese) penetrated to the north of the archipelago. In 1817 an expedition under Buchan and Franklin wintered in the ice off Spitsbergen, but the archipelago was little more than a geographical term until it came into prominence through recent exploration. Although stated to have been annexed in the 17th century by the Dutch, and in the 18th by the British, no steps were taken in either case to make the annexations effective, and Spitsbergen was regarded inter-nationally as terra nullus until 1919, when its status was under consideration by an Inter-Allied Commission, and it is expected that the archi-polago will be assigned to the sovereignty of Norway. It is also auticipated that the "squatter" claims of various nationalities will be recognised as at present existing.

The archipelago is generally mountainous and there are traces of extinct volcanic action. The highest points are Mount Newton (5,6% feet), Mount Poincaré (5,4% feet) in the N.E., and Hornunstind (4,6% feet) in the S. of the main island. The coast is deeply indented by fjords, of which the largest are King's Bay, Cross Bay, Ice Fjord, Bell Sound, Lowe Sound, and Horu Sound in the W., and Red Bay, Liefte Bay and Widje Bay in the N.; of these, Ice Fjord from the W. and Widje Bay from the N., the heads of which are only about to miles apart, give access to the centre of West Spitsbergen, and are of the greatest importance for the development of its resources.

Spitsbergen lies within 600 miles of the North Pole, but the Arctic climate is considerably influenced by a prevailing S.W. wind; there is, however, no possibility of cultivation. The principal minerals are coal, gypsum, oil and building stones. Carboniferous coal occurs principally in the centre of W. Spitsbergen, the area being estimated at 240 sq. miles, with a capacity computed at 6,000,000,000 tons, while Bear Island contains a greater area, which is stated to be of inferior quality to that of the main land. Steam coal, to the computed capacity of s,000,000,000 tons, and stated to be of the first quality, occurs near Ice Fjord, Green of the first quarty, occurs near let riord, trees, Harbour and Love Sound. In 1917 the coal export was 40,000 tons, and in 1918 60,000 tons (matnly to Scandinavia); the 1918 output is estimated at 100,000 tons. Two or more British companies are concerned in the mining industry. Gypsum (from which plaster of Paris is made) is stated to be abundant, and small quantities of copper have been found Marble, breecia, and other building stones are abundant. There are also supplies of oil shale, and indica-tions of free oil. The archipelago is visited by whalers (but the industry is declining), and by hunters for seal and wild fowl.

hunters for seal and wint fowl.
Certain districts in the main island (West
Spitsbergen) have been named as follows:—
King James Land and New Friesland (W. and
B. of Widle Fjord) in the W.; Sabine Land, in
the centre; and Torell Land in the S. There
are settlements at Longuear "City" (on LogFjord); Davis "City" (on Lows Sound); Green
Harbour (at the S. entrance of Ice Fjord) with a

high nower Telefunken wireless station (erected by the Norwegian Government) connecting with Empope; and Coal Haven (in King's Bay). South, Cape is gap, miles from the Norwegian Opat. Lee Rjord is gap, miles from Tromad, 650 miles from highmanek, and 1,300 miles from Aberdeen. Trainit from Tromad to Green Har-lour (the postal station) 3½ to 3 days; from Aberdeen to 8 days. Aberdeen s to 5 days.

Swedish Church, Harcourt Street, Marylebone Road, W. z.

Sweden comprises the eastern half of the Swadin comprises the captern hair of the capital and as governments, "Lân," with an area of 173,085 square miles, and a population, Dec. 21, 1929, of 3,849,037, nearly all Protestant. This area includes the great lakes of Hjälmaren, Mälaren, Vänern, and Vättern. Nearly 49 per cent, of the population are devoted to agriculture about seeken where were a second ture, about solloss being owners and so,oco tenants of the land they cultivate. The country for the most part is flat with pleasant undula-tions, rising in the north-west to the Kolen Mountains, which separate Sweden from Norway; and may be divided into three separate districts—the northern, forest; central, mining; the southern, agricultural. The climate in the the conthern, agricultural. The climate in the south is favourable for producing grain. The principal articles of cultivation are the various cereals—cats, rye, barley, wheet—and potatoes. The forests are very extensive, covering oue-half of the surface of the country, and constating of pine, birch, fir:,these are of great importance, supplying timber, sitch, and tar, and also the chief fuel. The mineral products are

extremely rich: iron of excellent quality, that known as the Dannesors from being converted into the fluest steel; gold and aliver in small proportions; copper, lead, nickel, sinc, cobalt, alum, sulphur, porphyry, and marble. There is a railroad opening up the rich iron-ore districts of Lapland, and mineral trains run from Gellivare and Kiruna to Lulea on the Gulf of Bothnia and to Narvik on the Atlantic. Considerable mines of cost are being worked in Scania. chief imports are coffee, wine, tobacco, and other ordinary colonial produce, coal, cloth, yarn, wool, cotton, skins, manure, iron, fish, ells, wheat, rye, pork, and machinery. The chief articles of export are timber, butter, iron, steel, wood pulp, paper, matches, stone, iron and zinc ores, &c.

Commercial travellers in Sweden are compelled to take out a licence, costing roo crowns a month, or they incur the risk of being fined.

Railroads 0.455 miles in length (of which 2.333 are the property of the State) were open on Jan. 1, 1919; and 45,187 miles of telegraph wires (inclusive of as,43 oralized telegraph wires), 182 stations, and 1,875 railroad and 1,880 other telegraph stations (rgr8). There were at the same date 273,492 miles of telephone wires.

Defence.—Service in the Army is universal and compulsory. The peace effective is about 90,000 trained men. The first line can be raised to war strength of about rie, co; second line, 85, coo. The Navy consists of 81 fighting vessels (485 guns), 19 being ironclads, with submarines, submersibles, and some training ships, &c.

Education.—(i.) Primary Compulsory and free. Illiteracy rare. Maintained by local Attendance taxation, with State grants. Attendance good. (ii.) Secondary: Well-developed. schools numerous and efficient. (iii.) Special schools make a feature of technics and navigation. (iv.) Universities: Lund, Upsala, and a few private faculties.

Hon. Attachés. MM. E. Stutz; M. Oederlin; W. Preiswerk.

Chancery Secretary, M. Walter Sterchi Counsellor, M. Charles Corragioni d'Oreili. The Helvetia of the Romans, a Federal

Republic of Central Europe, situated between as so was as N. lat. and so so zo so R. loui.
It is composed of as Cantons, of very dissimilar size, united under a Constitution dated as May, 1874, and comprises a total area of 15,950 square miles, with a population of 3.57,536 in 1953, who are divided between Roman Catholics, so per cent., and Protestants, 50 per cent., Jaws numbering 7,400 and others 15,000. The boptination is formed by three nationalities, distinct by their language, as German 72 per cent., French 22 per cent., Italian 6 per cent., and Romanshe (in the Grisons), 25 per cent. The most important cities are Zurich; pop. (2913) 203,255. Bale 137,125, Geneva 138,668, Berne 26,000 (2915), and Lausanne 65,125. It is the most mountainous country in Europe, having the Alps. covered with perennial anow and glaciers rising from with perennial anow and glaciers, rising from 5,000 to 15,023 feet in height, not only along its southern and eastern frontiers, but throughout the chief part of its interior; and the Jura mountains in the north-west. Agriculture is followed chiefly in the valleys, where wheat, oats, maize, barley, flax, hemp, and tobacoo are produced, and nearly all English fruits and vegetables are grown. The forests pover about one-sixth of the whole surface. The manufactures consist chiefly of silks, cottons, linen, lace, thread, woollens, &c.; clocks and watches have long been the staple products of Geneva and Neufchatel, while leather, gloves, pottery, tobacco and snuff, cheese, &c., are made. Being an inland country, the direct trade with the United Kingdom is comparatively small. In rgr4 there were 3,530 nilles of railway in working order, 17,333 miles of telegraph line, 217,403 miles of telephone line, and 2,000 post-offices. The legislative power is vested in a Parliament,

consisting of two Chambers, a National Council of 189 members, and a Council of States of 44 members; both Chambers united are called the Federal Assembly, and the members of the National Council are elected for three years, an election taking place in October. The executive power is in the hands of a Federal Council of 7 members, elected by the Federal Assembly, presided over by the President of the Confederation. The President has a salary of 20,000 francs; the Vice-President and other members of the Federal Council 18,000 france each. The members of the Federal Council are elected for three years; each year the Federal Assembly elects from this council the President and the Vice-President; they are elected for one year, the five other members for three years. Not more than one of the same canton may be elected member of the Federal

Council. Defence: Militia. Active Army, 12 yrs.; initial trg., 65-90 days. Subsequently 21 days per am.; then Landwehr, 8 yrs.; x trg., 12 days for dismitd. branches only; then [Landsturm to age 45]. Wer Strength, 140,600; Landwehr, 65,000; Landsturm,

Strength, 140,600; Landwehr, 65,000; Landsturm, 57,000.

Education.—Control by cantonal and communal authorities. No central organ. Hittersky rare in Protestant cantons. (1.) Primary: Free and nominally compulsory, but attendance is not strictly enforced in the essentishing Roman Catholic cantons. Schools are varies. (11.) Secondary: Age nang for boys. Schools numerous sind well-attended, and there are many private institutions. (iii.) Special schools make a feature of commercial and technical instruction. (iii.) Special schools make a feature of commercial and technical instruction. (iv.) Thirdratics: Bale, Beine, Fribourg, Gensei, Laussame, Zurich, and Reuchâtel.

The President is elected in December, and remains in other from a hange to Dec. the in severally succeeded by the Vice-President.

St. Gal?

French High Commissioner, Général Courand.

Under an agreement of May, 1916, between treat Britain and France (known as the Nyker-Proof Agreement) Syria from Tyre to Aleppo, Cibeda (in S.E. Asia Minot) and Southern Armenia (from Sivas to Diarbekir) were to be within the Brench "Sphere of Influence." The Syrian Districts of Damasons, Aleppo, Urfak, Deir and Mosul were to be Independent Arab districts, subject to French influence. Under the anne agreement Polesiase was to be constituted an International Territory from the Lordan to the Mediterranean, and Heijka and Mesopotamia (from Tekrit on the Tigris to the Persias Guill, were to be within the British "Sphere of Influence."

The richorious forces of Gen. Sir E. H. Allenby, in conjunction with Arab levies, under the leadership of the Emir Feisal (son of the King of the Helzs, Arabla), freed the whole of Syria

from Turkish rule in rank, and in accordance with the terms of the Hykos-Pices. Agreement, or French garrisons (under the command of Gen. Gouraud) were placed in certain ettics of Syriation and Lebanon; but Damascus and Aleppe had previously been eccupied by Arab adherents of the Emir Feisal and on March 8, 1988, the "Syrian cogress" at Damascus declared Juzis independent, and the Emir Feisal was rewred King of Syria. The area claimed by the "Syrian Congress" incolded the Lebanon, Palestine and Northern Mesopotamia. The action of the Syrian Congress was repudiated by the Supreme Council of the Allel Powers.

l'inder the Treaty of Peace with the Allies (1920), Turkey renounced the sovereignts of Syria, Cilicia and Lebanon, and their administration was entrusted to France by the Countil of the Allied Powers, the Sykes-Picot agreement being modified as and where necessary to corres-

pond with the changed circumstances.

Syria is a geographical term for part of the former Turkish territories in Asia Minor, and extends from the Arabian Desert in the south : to Khurdistan and Cilicia in the north, and from the Jordan, the Grand Lebanon and Cilicia in the west to Mesopotamia in the east, with an estimated area of 207,000 square miles, and a population of about 3,566,500, of whom the greater number are Orthodox Muhammadans, with a proportion of Shifte Muhammadans and Druses. "Responsible Government ' has been accorded to Syris and the executive power has been entrusted by the High Commissioner to a Cabinet (formed July, 1923) with Alla-ud-din Bey Druby as Premier, the Cabinet being responsible to Congress. The products of Syria are wheat, tobacco, fruit and wine, but there is little cultivation without irrigation, the inland districts being cut off from the moisture-laden winds by a mountain barrier, running parallel with the coast, while between flyria and Meso-potamia is the Syrian Desert. The principal potania is the syrian lesser in principles. Syrian towns are banascus (est, p.p. 300,600), Aleppo (250,000). Homs (70,000), and Hassah (60,00). The Pilgrima Railway (through Arabia) and the Haifa line (through Palestine), reach Damascus from R., and the Beirnt line from W., the last-named extending northwards (with a westward connexion to the coast at Tripoli) to Aleppo, where there is a junction with the Baghdad railway. Damaseus contains the Baghdad railway. Mosque of the Ommayedes (where is the tomb of Saladin), and in the south-western quarter is "The Gate of God," through which the pilgrimage to Mecca passes sunually, while the "street valled Straight" (Acts ix, zr) rane B. to W. through the city Damascus is an important commercial centre, and among its industries are metal work and mother-of-pearl inlay. Baalhek (Heliopolis), on the eastern slopes of the Anti Lebanon range (35 miles N.N.W. of Danascue), are ruins of an to 3rd cantury Roman temples (the Circular Temple, the Great Temple andthe Temple of Baccium), and In the vicinity of the suins is the largest out stone in the world (60  $\times$  17  $\times$  14 feet), weighing 1,500 toms.

The Capital of Syria is Damaseus.

Britis! Consul-General, Damaseus, Ollicia extends round the Gulf of Alexandrotta, from Lebanon in the south to the And Therus in the north, and from the Beilain Trank river in the west to Urfa in the east, the total area

(which includes part only of the ancient Roman province of Cilicia, or of the Turkish villayet of province or canear, or or the furnism vinayer or Adhma) heing about it ages square inities with a population estimated 320,000. The country is generally fertile and produces wheat, cotton, wood; seeme, etc., and is capable of counterable agricultural development. The principal towns agrentural evelopment. The principal towns are Admis-(4g.000), the former capital of the Twikish vilayet of that name, Marash (90,000), and Alexandretta or Islanderun (20,000), the chief post and an important strategical centre with command of the Bellan Pass.

British Consul-General, Alexandretta,
The Great Lebanon (the former Turkish vilayets of Lebanon and Beirut), declared a State by the High Commissioner, under the title of *The Great* Lebanon, in 1920, extends along the Mediter-ransan littoral from Palestine and Haifa to Cilicia, and eastward to the Anti Lebanon Ridge and to Syria. The estimated area of the Great Lebanon is about 7,000 square miles, with an estimated population of 600,000. The products of the soil are wheat and other grain, and cotton; the live stock are numerous and one of the principal sources of wealth. The Capital is Beirut (pop. 200,000), other towns being Tripoli (20,000), and Antioch (25,000). The scaports are Tyre, Sidon, Beirut, Tripoli (or Tarabulus) and Latakia. The national flag is the French tricolour with a Cedar of Lebanon on the white band.

British Consul-General, Berrut, R. A. Fontana.

# TURKEY. (The Ottoman Empire.)

Sultan, Muhammad VI. (Wahid Ed-din), b. Jan. za, 1861; succeeded his brother, July 3, 1918. Herr Presumptive, Abdul Medjid Effendi, born June 27, 1860.

CABINET, Oct. 28, 1920.

Prime Minister (Grand Vizier), Tewfik Pasha, Sheikh ul Islam, Nourl Effendi. Forsign Affairs, Sela Bey. War, Zia Pasha. Marine, Salih Pasha Interior, Izzet Pasha. Finance, Rashid Bey. Instruction, Mustafa Reshid Bey.
Public Works, Abdullah Bey.
Justice, Arif Hikmet Pasha. President, Council of State, Mustala Arif Bey. Commerce & Agriculture, Hussein Kiazim Bey. Munister Resident in London (not yet appointed).

Consul-General, London (not yet appointed).

The Ottoman Turks are derived from Central Asian tribes, who were converted to the Muhammadan faith in the seventh century. These Muhammadan tribes attacked and conquered the Asiatic Provinces of the Byzantine (or Eastern Roman) Empire, and by the middle of the fourteenth century they had spread from Asia Minor into South East Europe. In 2453 they captured Constantinople, and spread over the whole of the Balkan Peninsula, their name of Osmanli, or Ottoman Turks, being derived or temanis, or teleman (rises, being derived from Othman, or Geman (rises-rase), a notable Tarkish leader in the fourteenth century. Early in the sixteenth century the Ottoman Empire was spread over Early and northern Africa, and penetrated northward into Hungary, a great part of which was incorporated with the Turkish dominions until view when the Pages of Carlo-

the nineteenth century the outlying African dominions, with the exception of Tripoli, broke away from their suzerain, or were occupied by other Powers, and in the latter part of the century the northern states of the Balkan Peninsula asserted their independence, under guarantees of the Christian Powers. The outcome of these political upheavals was a demand for better government in the remaining dominions of the Sultan. During the process of constitutional reforms, which drove the Sultan Abdul Hamid (1876-1908) from the throne, war broke out between Italy and Turkey, and Tripoli and Benghazi were ceded to Italy under the Treaty of Lausanne (Oct. 13, 1912). These events were followed in the autumn of 1912 and the early months of 1923 by a disastrous war with the states of the Balkan League (Bulgaria, Montenegro, Serbia and Greece). At the outbreak of hostilities the European dominions of Turkey extended westwards to the Adriatic and northwards to Boania-Herzegovina (Austria), thus including the districts known as Macedonia, Thrace, and Albania. By the Treaty of London (1913), the north-western boundary of European (1973), the hortz-western continuary or actioposis. Turkey was a line drawn from Enos, on the Adriatic coast, to Midia, on the Black Sea, thus excluding Adrianople, which had capitulated (after a long siege) to the Bulgarian forces. At the outbreak of the second Balkan war (in which Serbia and Greece were aided against Bulgaria by Rumania), Turkey took advantage of the military difficulties of Bulgaria and re-occupied Adrianople, thus recovering a part of the lost dominions. In the war of 1914-1918, Turkey threw in her lot with the Central Powers and made unsuccessful attacks on Egypt and South Russia. Great Britain sent expeditions to dallipoil (which were withdrawn) and to Mesopo-tamia and Palestine, which freed those countries and Syria from Turkish rule, while various tribal revolts in Arabia ended the Turkish suzerainty in that peninsula. On Oct. 30, 1918, Turkey surrendered unconditionally before the conquests of the various Anglo-Indian and Imperial British columns and their Arabian allies.

Under the Treaty of Sevres (1920) the boundaries of Turkey are set out and the Ottoman Empire now consists (Nov. 2980) of :-

Turkey in Europe (2,500 Sq. miles) consisting of the city and district of Constantinople, including Lake Derkes (the reservoir for the water supply of the city) with a population of about 1,300,000. European Turkey is separated from Asia by the Bosporus at Constantinople and by the Dardanelles (Hellespont)—about 40 miles in length, with a width varying from 2 to 4 miles —the only political neighbour being Greece, on the west. The custody of the Dardanelles (the gateway to the Black Sea) and the navigation of the Straits, the Sea of Marmora and the Rosporus, is placed under international control. The port of Constantinople (from St. Stefano to Dolma Bagtchi) in European Turkey, and of Haida Pasha, Smyrna, Alexandretta, Haffa, Basra, Trebizond and Batum, in Asia Minor, are declared to be of "international interest.

Turkey in Asia (140,000 sq. miles, estimated population \$,000,000) comprises the whole of Asia Minor (with exceptions afterwards noted) and extends from the Aegean Sea to abou penetrated northward into Hungary, a great 4.° 30′ E. long, and from the Black Sea to part of which was incorporated with the Turkish the Mediterranean. This area corresponds sourisions mutti sign, when the Passes (Fario sproximately with Anatolis ("Land of the witz freed the country from Turkish rule. In Hising Sun," or Orient) of the Greek historians, bitt part of the former vilayet of Aidin (Smyrna) is assigned to Greece (subject to a plebisette of the lababitanta within g years from 1920), while the vilayet of Konia (about 40,000 sq. miles) is similarly assigned to Italy, and part of Culcia (Adana) to France. In addition, Turkish rmania is declared to be autonomous, and

Euroistan is recognised as independent,
All other territories formerly subject to the Ottoman Empire are declared to be independent of Turkey. The Aegean Islands and the Dode-cancies are transferred to Greece and Italy, Cupcus, Egypt and the Sudan are recognised as British Protectorates, while Suria, the Great Lebanon, Mesopotamia, Palestine and Raifa, and Arabia are acknowledged to be independent

of Ottoman rule.

The Capital of the Ottoman Empire and the principal town of European Turkey is Constantinople (the Roman city of Byzantium, selected by Constantine the Great as the capital of the Roman Empire about A.D. 328 and renamed by him; became capital of the Eastern Roman Empire, A.D. 264); those of Asiatic Turkey are Scutari in Anatolia (80,000), Broussa (80,000), Kalsarlya (70,000), and Sivas or Schastela (65,000).

The present Sultan is in direct descent from Othman, the founder of the Empire, in whose line the succession is vested, the eldest male representative in the direct succession being the

presumptive or apparent heir.

The Sultan is Caliph of the Muhammadan world, but the outcome of the War of 1912-18 has greatly restricted his title. The religion of the State is by law Muhammadan. Education is nominally compulsory and free. There are training schools, and at Constantinople a uni-versity, founded in 1900.

Although the soil of Turkish Asia Minor is generally fertile, agriculture is still very primitive. Cereals are abundantly produced, cotton, tobacco, and coffee are generally cultivated, and figs, nuts, grapes, olives, and many varieties of fruit are grown. Cattle raising is an important industry. The exports were considerable before the War, and consisted principally of coffee, opium, tobacco, cotton, carpets, gums, and ottar of roses. The forests are a source of wealth, and the mulberry is planted for the silkworm The mineral wealth of Asia Minor is industry. considerable, but almost undeveloped. Chrome ore, zinc, mauganese, antimouy, copper, borax, corundum (emery), coal and lignite, petroleum, gold, and arsenic are among the minerals produced. The principal manufacture is carpet-weaving. Before the War the exports were valued at about £Tag,coc,coc annually, and the imports at about £T45,000,000 (£Tzz = £20).
About 60 miles of railway remain und

under Turkish control in European Turkey. In Asia Minor the Anatolian Railways run from Smyrna to Kenia, and thence (as part of the projected Baghdad Railway) to Eregli, and from Haidar to Angora: with other lines these have a total length of about 1,500 miles. There are electric

trams in Constantinople.

Turbish Finances.-Attempts have been made since sees to establish a Parliamentary control over the finances, and budgets have been drawn up and adopted. The chief sources of revenue are direct texas; customs duties, and mono-polies, and from these sources a revenue of about go to a millions (£T) is obtainable on the present basis of taxation. The expenditure (owing to the service of the debt) is at least half

as much again in recent budget estimates, the interest on the debt requiring almost the whole of the revenue.

The General Debt of the Ottoman Empire was stated on Oct. x, pag. at \* Tiss. spo.af\*, and during the War of pag-at loans and advances of \*Tiss. pag. by the Tiss. pag. at \* Tiss. pag. at the total to \*Tiss. pag. by Aug. 3x, upst. The Exyptian Tribute Loan (\* Tir, as, as, the total to total to total to total to total to total to total to total to total to total to total paying it at \* Tiss. pag. gevelusive of indemnities or reparations to the Allies The Debt of \*Tiss. pag. pag. requires Allies The Debt of £T429,000,000 requires £T21,000,000 for interest and administration annually, out of a total average revenue of about £1'32,000,000. There is a proposal for a Joint International Financial Commission to reorganise the fluances of the country.

Imports from U.K. ......£1,814,203 £22,962,868 Exports to U.K. ... 9,672,683 694.715 CAPITAL, Constantinople. Estimated popula-

tion (1913), circ. 1,200,000.

The smallest Republic in South America, on the east coast of the Rio de la Flata, situate in lat, 30°—35° S. and long, 53° 35′—39° 42′ W., containing an area of 72,220 square miles, and a population on Jan. 2, 228, 6° 2,427,447.

rugnay resisted all attempted invasions of the Portuguese and Spaniards until the beginning of the 17th century, and 100 years later the Portuguese settlements were captured by the Spaniards. From 1725-684 the country formed part of Spaniah South America and underwent many vicinstitudes, during the Wars of Independence. In 1814 the armies of the Argentine Confederation captured the capital and annexed the province, and it was afterwards annexed by Portugal and became a province of Brazil. On Aug. 29, 2825, through the heroism of the 33 liberators (whose memory is perpetuated in the name of the province of Treinta y Tree), the country threw off the Brazilian yoke. This country threw off the Brazilian yoke. action led to war between Argentina and Brazil which was settled by the mediation of the United Kingdom, Uruguay being declared an independent state in 1828 In 1830 a Republic was inaugurated, with a Constitution of Sept 20, 1829 The President is elected by the legislature for a term of 4 years and is ineligible for a consecutive period of office. By an amendment to the Constitution (which came into force March 1, 1919) an administrative council was appointed to sharethe Executive power with the President. This amendment has already caused difficulties.

The country consists mainly (and particularly in the south and west) of undulating grassy plains. The principal chains of hills are the Cuchilla del flaedo, which crosses the Brazilian boundarigand extends southwards to the Cuchilla Grande of the south and east. In no case do the peaks exceed a,ooo feet. The principal river is the Rio Negro (with its tributary the Y1), flowing from north-east to south-west into the Rio de la Plata. The boundary river Uruguay is navigable from its estuary to Salto, about soo miles north, and the Negro is also navigable for a considerable distance. Smaller rivers are the Cuareim, Yaguaron. Santa Lucia, Quequay, and the Cebollati. On the south-east boundary crosses (the Brazilian) Lake Mirim. The climate is extraordinarily healthy, with great uniformity of temperature, the summer heat being tempered by the breezes of the Atlantic and the geographical position causing a high thermometer in winter.

Wheat, barley, and maize are cultivated, but the export is at present prohibited. The wealth of the country is obtained from its pasturage, which supports large herds of horned cattle (9,000,000 in 1908) and sheep (25,000,000 in 1908), the wool of which is of excellent quality. Gold mines exist at Cuñapiri. The exports are entirely animal products, and include frozen and preserved meat, wool, hides, horn, hair, tallow, and jerked heef; the imports are principally machinery, textiles and clothing, food substances and beverages, coal, and bloodstock. The imports from the U.K. are numerous, the principal being woollen and cotton goods, hardware, and coals. There are 1,500 miles of railway open (1918), all in British hands, and 4,500 miles of telegraph, with 19,000 miles of telephones. There

letters and packets. The language spoken is

Venezuels lies on the north of the South American coutinent, and is bounded on the north by the Caribbean Sea, west by the Republic of Colombia, east by British Guissa, and south by Brazil. The western benackary is in dispute, the area estimated by Venezuelas in dispute, the area estimated by Venezuelas geographers (sop, age aquare miles) iging bely sean  $v^*_{\alpha\beta} = v^*_{\alpha\beta} form the newly constituted State of

Assessments. Margarita has an area of about venezuela was visited by Columbus in 1498, and in 1498 by Alonzo de Gjeda and Amerigo Venpuosi. the former naming the Gulf of Marassile Venezuela, or "Little Venice" (on account of the Indian pile-built astituments. of the Indian pile-built settlements on the coast and shores of the lake, and the name was after-wards extended to the whole of the Orinoco basin. In 1550 the territory was formed into the captaincy-general of Carácas, and the country remained under Spanish rule until the revolt under Simon Bolivar, a native of Caracas, who defeated the Spanish forces in the battles of Lastoguanes (1813) and Carabobo (1821), and thus secured the independence of the country. Bolivar was an untiring hero in the cause of Bolivar was a untiring new in the cause of independence, and through his efforts (and those of his adjutant Sucre) Venezuela, Ecuador and Colombia (Upper Peru) achieved their freedom from Spain, while Peru was enabled to establish its independence in consequence of his victories He died in 1830, at the age of 47, and his remains were re-interred at Carácas in 1842. Venezuela, formed part of the Federal Republic of Colombia from 2823-2830, since which time it has been independent. There have been many revolutions since 1846, particularly in 1849, 1868, 1889, 1891, 1891, 1892, 1892, 1892, 1892, 1893, 1894, President Monagas liberated the African slaves, and in 1864 President Falcon divided the country into States and formed them into a Federal Republic. The present constitution rests upon the fundamental law of August 3, spee, under which the govern-ment is that of a Federal Republic of twenty autopomous States, a Federal District, and two Territories, with a President elected by the Federal Congress for four years and ineligible for a consecutive term of office, and a "Council of Government" of ten members (one for each two States), chosen by Congress for four years, its members (by seniority) supplying at need a successor to the President.

The Eastern Andes from the south-west cross the border and reach to the Caribbean Coast, where they are prolonged by the Maritime Andes of Venezuela to the Gulf of Paria on the north-east. The main range is known as the Hierra Nevada de Merida, and contains the highest peaks in the country in Picacho de la Rierra (15,4so feet) and Salado (13,898 feet), the maritime ranges containing the Silla de Caracas (8,531 feet). Near the Brazilian border the Sierras Parims and Pacaraims and on the eastern border the Sierras de Rincote and de Usupamo enclose the republic with parallel northward spurs, between which are valleys of the Orincoc tributaries. The Sierra Parima contains Yaparana (7,275 feet) and Duida (8,230 feet), and Para Caima contains Maraginaca (8,330 feet) and Roraima (8,330 feet), the latter being on the Venezuela-Guiana boundary. The slopes of the mountains and foothills are covered with dense forests, but the basin of the Orinoco is mainly liance, or level stretches of open prairie, with occasional woods.

The principal river of Venezuela is the Orinoco, with innumerable affluents, the main river exceeding 1,500 miles in length from its rise in the north-western mountains of the republic to its outflow in the deltaic region of the north-east. The Orincoo is navigable for large steamers from its mouth for some 700 miles, and by smaller vessels as far as the Matpures Cataract, some

see miles further up stream. Among the many tributaries of the main stream are the Ventuari, Caura and Caroni from the south, and the Apure with its tributary the Portuguesa, Aranca, Meta, and Guaviare from the west, the Meta and Guaviare being principally Colombian rivers. The upper waters of the Orinoco are united with those of the Rio Negro (a Brazilian tributary of the Amazon) by a natural river or canal, known as the Cariquiare. The costal regions of Venezuela are much indented and contain many lagoons and lakes, of which Maracaibo, with an area exceeding 7,000 square miles, is the largest lake in South America. Other lakes are Zulia (ago square miles), south-west of Maracalbo, and Valencia (are square miles), about 2,400 feet above sea level in the Maritime Andes. The llanes also contain lakes and swamps caused by the river floods, but so far as is known they are frequently dry in the summer seasons.

The climate is tropical and except where modified by altitude or tempered by sea breezes is unhealthy, particularly in the coastal regions and in the neighbourhood of lowland streams and lagoons. The hot wet season lasts from April to October, the dry cooler season from November to March. Yellow fever is endemic at Carácas, and plague cases have occurred there since roos.

The principal imports are cotton prints and shirtings and cotton drill, mainly from the U.K., and hardware, principally from the U.S. principal articles of export are coffee (8s,38s metric tons in 1918-19), cacao (18,527 metric tons in 1918-19); goatskins, asphalt, sugar, hides, and balata. The U.S. is the principal customer. Spanish is the language of the country.

The Kingdon of the Serbs, Crosts, and Slovenes is an outcome of the War of 1914-1918, through the fusion of the Kingdoms of Serbia and Montenegro with the Yugo-Slav districts of Austria-Hungary. The area and population of the new kingdom are approximately as under:—

District.	Sq. Miles.	Est Pop.
Serbia	34,500	5,000,000
Montenegro	5,800	500,000
Crotia and Slavonia .	16.418	2,700,000
Banat (part)	6,000	800,000
Boxnia		1,630,000
Herzegorina		270,000
Carniola (part)	2,500	350,000
Styria (part)	1,900	350,000

Total .. 86,878 11,600,000

The political neighbours are the Republics of Austria and Hungary on the north, Albania and Greece on the south, Bulgaria and N. V. Greece on the east, and, on the west, the "buffer state" of Fiune Istria Dalmatia and the Adriatio Sea. This "buffer-state" has been constituted by agreement with Italy, and in it Fiume (the former Austrian port) has a special status, and is administered by a committee of five members (two Italians, two Yugo-Slavs, and one citizen of Fiume) In Sept., 1919, and undicial raiding party of Italians, under the leadership of Gabriele D'Annanzio, the soldier poet, seized the port and town of Fiume.

In 1913 Serbia, as a member of the Halkan League (Bulgaria, Greece, Serbia, and Montenegro), waged a successful war against Turkey, and enlarged her boundaries; but in August, 1913, Serbia and Greece were attacked by Bulgaria, their former aily, owing to disputes concerning the division of the spoils. The second war collapsed in a few weeks through the threatened intervention of Rumania, and ended in the Treaty of Bucharest (Aug. 2, 1913), by which the whole of "Old Serbia" (the greater parts of the Turkish vilayets of Macedonia) were included within the Serbian boundaries. The assassination of the Austrian Heir Treaumptive (June 28, 2914), brought about an invasion of Serbia by the forces of Austria-Hungary and resulted in the War of 1914-1914 Aufring which the whole country was overrun by the forces of Austria, Germany, and Bulgaria. On Aug. 28, 1916, the Serbian Parliament met at Corfu, but in Oct., 1918, the Serbian armies were again in occupation of Nigh, and on Nov. 3, 1918, the capital was re-occupied.

perbla has no scaport, but access to the Adriatic is guaranteed by the Treaty of London (May 13, 1913), over any railways built through Albania.

under Serbian auspices. By a convention with Greece of May, 1924, similar accuse its estatisment to the port of Salomka, on the Augebra; and by the Treaty of Paris (June et., 1924) access the granted to Frame and the Delmatian 19226s. The bulk of the trade is with Austria. There were (1923) 650 miles of railway, and (1924) at 1922 miles of telegraph line, with 1,1962 post-offices and 2,325 miles of telephone line.

The Army on a peace footing consists of 30,000 officers and men, the war strength

being about see,oso.

The religion of the state is Greek-Orthedox. Primary education is free and nominally-compulsory, but the attendance does not settled as per cent of the young. The State also make tains Secondary and Girls' High Pohnols. The University is at Belgrade.

The capital, Reignade (Beograd — White Fortress), at the confluence of the Save and Dannie, is a modern city, with electric transways and light, and wide streets; it contains the university, the national museum and library, and the old Turkish ritadel. In 1914 Reignade contained about 200,000 inhabitants. Other towns with their (1914) populations are Monassir (60,000), Pristend (44,000), Uskib (32,000), Nish (25,000), and Prilip (44,000).

(ag.000), and rTilip (a4,000).

Montenegro was formerly a province of the old Serbian Empire which came to an end after the battle of Kossovo in 1980, since which date it has always claimed to be independent, and it was recognised to be so by the Treaty of Berlin (July 12, 1893). It has an area of 1,800 square miles (including the territory acquired from Turkey in 1913) and a population estimated at 500,000. On Nov. 20, 1918, the National Skupshtina deposed King Nicholas (who had reigned since Aug. 28, 1860), and a decision was made to reunite Montenegro with Serbia. The capital is Cettinje (pop. 5,000) and the ports are Antivari and Dulcigno.

Croatia, Stavonie, &c.—On Oct. 30, 2018, at the dissolution of the Austro-Hungarien. Kingdom, the National Assembly of the former Hungarian provinces of Croatia and Slavonie proclaimed the complete independence of those provinces, and a National Council was astablished, to which representatives of other filev States (Bozma, Herzegovina, and parts of Austria and Hungary) were admitted.

# BUILDING QUILDS.

As interesting experiment in the building world has been mangurated during the past results the form of Building Guilds. For some years must be form of Building Guilds. For some years peat the principles of the guild system have seen during increasing favour in the labour world; mad to the building industry has now been given the opportunity of putting these principles to a practical test. The supporters of the new system had to cope with the post-war housing difficulties and that a fair trial of the new scheme will lead to an increase in efficiency and an improvement in output. The control of this guilds is vested in the representatives of trade smions, together with representatives of trade smions, together with representatives of the administrative and technical staffs required for the work. Provision is made for a full week or "all-weather" employment, so that workers will not suffer from pay shortages owing to interruptions of work due to inclement weather. It is not desired to run the guilds on a profit-earning basis, but an additional percentage over cost is required to cover losses from the full-week wage system, purchase of plant, etc.

The first guild to start operations was the Manchester Building Guild, a limited company under the Companies Act, which came into existence early in 1920, with the object of contenting for the building of houses for local authorities. After negotiations between the Guild and the Ministry of Health an agreement was reached with regard to the form of contract between building guilds and local housing authorities which the Ministry will approve. The guild agreed to give a definite estimate for each type of house, which must be approved by the Ministry, and the guild's remuneration will be a lump sum of £40 per house to guarantee the full working week, and a further allowance of 6 per cent. On the prime cost of each house to conver overhead charges. The agreement provided that the Co-operative Wholesale Society might be associated in the contract for the purchase of materials, and that the Co-operative Hastrance Society, Limited, on being satisfied with a contract, would insure the local authority against loss under a contract for a premium of one-eighth of 1 per cent.

Following the Manchester Guild, the London District Council of the National Federation of Building Operatives proceeded to the formation of the Guild of Builders (London), Ltd., which is a society registered under the industrial and Provident Rouleties Acts, seg-seg. Similar to the Manchester Guild in the essentials of its working arrangements, the London Guild intends to work for every type of building owner, whether public or private. A large number of building guilds have since been formed throughout the country, affiliated to the London or Manchester Guilds, and it is hoped by the supporters of the new system that a National Building Guild, which will link up all the branches in one organization, will be subsequently established.

# CAPITAL LEVY AND WAR WEALTH TAX.

THE much-discussed question of a capital levy was brought to the direct attention of the House of Commons in connexion with the appointment of a Select Committee to enquire into the pro-

posal to impose a tax on war-time increases of wealth. An amendment to the motion to appoint this committee was moved, to widen the terms of reference to include an enquiry into a levy or capital for the specific purpose of reducing the National Debt. But this amendment, which received the support of the Labour Party, was defeated by 167 to 6a. Thereupon the Government's resolution was agreed to and the Select Committee appointed. This Committee heard the views of the Chancellor of the Exchequer, representatives of bankers, stockbrokers, landowners, agriculture, trade and commerce, expert economists and surveyors, the Treasury and the Board of Inland Revenue. The Committee ex-amined a scheme prepared by the Board of Inland Revenue, under which taxpayers liable would be required to furnish returns, to be officially examined and checked, giving parti-culars of their wealth at home and abroad on June 30, 1914 and June 30, 1919. Duty would be payable either in cash or by the transfer of dovernment stock or other appointed securities, and payment might be made by instalments, with interest, over a period of years. The Board submitted for illustration purposes two submitted for illustration purposes two graduated scales of duty, which would have yielded estimated amounts of £500,000,000 and £1,000,000,000 respectively It was estimated that the aggregate of the individual increases of wealth for the whole population of the United Kingdom is £4,180,000,000, and that if the increases in the hands of those persons whose post-war wealth does not exceed £5,000 are excluded, there remains an aggregate increase of £2,846,000,000 in the hands of 340,000 persons Objections were raised to this scheme, and

Objections were raised to this scheme, and several new schemes were prepared in which provision was made for largely increased tax-free allowances. Under the scheme adopted as a basis for enquiry, an abatement equivalent to a percentage of pre-war wealth was to be deducted from the amount of the increase of wealth. That percentage was now where the pre-war wealth did not exceed \$55,000 and diminished by steps until it reached 30 in cases where the pre-war wealth exceeded \$500,000. The rates of duty on the balance started at 40 per cent. and rose by stages to 80 per cent. The number of taxpayers under this scheme it was thought would not exceed \$500,000. The Committee decided that the scheme was practicable and that the burden of taxation would in the main be cast only on those individuals who could most justly be called on to make the sacrifice. As regards the question of practicability in its wider sense of expedience and desirability, the Committee left that tills question was one which could only be determined with regard to national and financial conditions in general.

Following the report, discussion in Parliament was opened by Mr. Clynes moving "... that in order to meet the financial burdens and assist in liquidating the National Debt further measures should be adopted for raising revenue from accommutated wealth." The Chancellor of the Exchequer in his reply declared that as a fiscal expedient the levy is shown to be a failure, and the motion was defeated by sat to 3z.

# TRE CENSUS OF 1921,

THE decennial census of Great Britain will be taken during 1921. The Census Act of 1920 differs

from previous Census Acts in that instead of being limited to a single census it provides that census for Great Britain, or for any part of Great Britain, may be taken from time to time under Orders in Council. The Order may prescribe the date on which the census is to be taken; the persons by whom and with respect to whom the returns are to be made, and the particulars to be stated in the returns. The Act stipulates that an Order may not require a census to be taken more often than every five years, so that apparently a quiuquennial census is contemplated, as this departure from past procedure, i.e., a census every ten years, means that if an extra census is not taken in the fifth year following a decennial census it cannot be taken afterwards without breaking the series of decennial censuses.

The particulars required in the census returns are not all specifically set out in the Act, as has been the case with previous Acts passed in each year preceding the taking of the census, but must be defined by the Order in Council, subject to the limitations laid down in a general way in the schedule to the Act. The particulars in the schedule include—names, sex, age; occupation, profession, trade or employment; nationality, birthplace, race, language; place of abode and character of dwelling; condition as to marriage; any other matters with respect to which it is desirable to obtain statistical information with a view to ascertaining the social or civil condition of the population.

For the purpose of enabling any Order in Council directing a census to be taken to be carried into effect, the Minister of Health (or the Secretary for Scotland) may make regulations (a) providing for the division of the country into districts and the appointment of persons to act in those districts; (b) requiring superintendent registrars, registrars, overseers and assistant overseers of the poor, relieving officers for poor law unions, collectors of the poor rate, and such other persons as may be employed for the purpose of the census, to perform such duties as may be prescribed; (c) requiring persons employed for the purpose of the census to make a statutory declaration with respect to the performance of their duties; (d) requiring the chief officers of public or charitable institutions, or of any other institutions prescribed by the regulations, to make returns with respect to the inmates thereof; (e) with respect to the forms to be used in the taking of a census.

An interesting innovation is contained in Clause 6 of the Act, which provides that if an application is made at any time by a local authority to the Minister of Health, or the Secretary for Scotland, asking that a census may be taken for the whole or a part of its own area, or for the whole or any part of an adjoining area, the required permission may be given if it be considered that the census would facilitate the due performance by the local authority of its statutory duties. Any expenses incurred in connection with the taking of such an enumeration, including the publication of any reports or returns with reference thereto, are to be paid by the local authority by which application is made, and are to be deemed to be part of the general expenses of that authority.

Penalties are specified in the Act for failure to comply with its provisions. The Act does not apply to Ireland.

# DAY CONTINUATION SCHOOLS.

An innovation which will have far-reaching efforts on the educational, industrial and social life of the country will be made during see by the opening of compulsory day teachmention schools, in accordance with the provisions of size Education Act of agra. After an "appoint day" all young persons between the ages of a and 18, with certain exceptions, must attend these schools, to be conducted between & s.m. and 7 p.m. Young persons who have attain the age of 24 prior to the "appointed day" will be exempt, and in the first instance the obligation will not apply to young persons between as and is years of age. Only after a period of seven years from the "appointed day" will these latter young persons come within the soaps of the obligation. The "appointed day" will be fixed generally by agreement between the Board of Education and the local education authorities throughout the country, and the Fresident of the Board of Education has stated that he contemplates some time in the autumn of some the date by which all education authorities should have made some provision for compulsors attendance, but that he would welcome any efforts on the part of the local authorities to anticipate this date. In London a number of schools will be opened on or about Jan. z, zeer.

Attendance at a day continuation school will be compulsory for a minimum period of gao hours a year, and in order to enable all young persons to attend the schools employers must suspend their employment and allow them such time, not exceeding two hours on any one occasion, as the local education authority consider necessary, to secure that they arrive at the school in a fit mental and bodily condition to receive full benefit from the instruction given. Instruction will be free, and important powers in connection with the provision of medical inspection and treatment are given to the local education authorities. A large number of business houses have already instituted voluntary day continuation schools for their employees. and those employers will probably wish their schools continued in accordance with the Act. Other employers may desire the local education authorities to conduct and maintain compulsor day continuation schools in premises which they are prepared to place at the disposal of the authorities.

The scheme for London has received a great amount of careful attention from the London County Council during the past year, and representatives of employers and employees in various industries have been consulted as to the most satisfactory lines on which to proceed. The following general principles were approved by the Education Committee of the Council:— (a) With some exceptions it would appear that the most convenient arrangement would be for the young persons to attend the schools for two half-days of four hours each week. (b) Schools should be established near the place of employment rather than near the place of residence.
(c) The curriculum should, as a rule, provide general education for the 24 to 26 age groups, with at least a vocational blas for the 26 to 28 age groups, and in some cases education in a definitely technical or commercial character. (d) Except in the case of seasonal trades facilities for instruction should be continuous throughout the year, i.e., the schools should be open practically all the year, and should also be

open on sturday nortings.

Life hoped by the Council that the corporate life of these schools will be festered by the development of many extraneous social activities, and that sports and games clubs, recreational and social organizations, visits to places of educational interest, rambles, etc., will become astablished. The schools should eventually become in the evening centres of vigorous social life.

# DRUKKENNESS.

THE fear that the encouragement to drink rum whilst on active service would lead to much druskenness after the war appears to be quite unfounded. It is not fashionable to become intoxicated, whilst on the other hand women dripk, and smoke also, in public considerably in advance to the custom of 1913. The advent of Mr. "Pussyloot" Johnson in England, the strengthening of the Prohibition Parties abroad. has raised considerable interest in temperance matters. The experiment of Local Option in Scotland may lead to similar legislative measures for England and Wales. Statustics in regard to drunkenness are hardly satisfactory for purposes It is impossible to count the of argument people who get drunk simply because there is not a means of registering them. The official figures for drunkenness convictions are .-

The premises licensed for the sale of intovicating liquors for consumption on or off decreased rag induces for consumption on or or decreased from \$4,644 on Jan x, 1938, to \$4,044 on Jan x, 1929. The average decrease per annum since the 1904 Licensing Act came into force was 1,069. In 1939, \$,049 Clubs were registered.

# GAMBLING IN MARKS.

In pre-war days, transactions in foreign oxchanges were for the most part in the ordinary course of trade, i.e., purchase and sale of goods alroad. Violent fluctuations that came with the war gave rise to much speculation, and the lucky gambiers made big profits. Large quantities of rouble notes were bought and sold, and millions of flotes were gradually brought into this country, being paid for at as or less each. To duy, these notes are practically worthless currency. When war ended with Germany trade

gradually against Germany. Then followed the attempt of the Kapp revolution. The number of marks to the £2 rose on the first days of the month thus; Dec. 258, Jan. 287, Feb. 262, March 322. An improvement set in from the German point of view, and on April; the number of marks to the fix fell to 277, and a month later the figure was 220. The Kappist episode had been well used by the speculators to reduce the value of the mark. Throughout to reduce the value of the mark. Infougheut May the improvement in value grew from smo to zee on May s6. The tide turned, ead on June 14 the figure was back to that of May 28, namely 133. Fluctuations were recorded daily, as will be seen from the range of 247 on July 6 and sig on August 31; Sept. 7 had a figure of 170, Oct. 30, 340, and Oct. 30, 352.

The Bank of Germany had been increasing

its note issue almost beyond bounds. In the the note issue almost beyond bounds. In the year ended Oct. 15, 1980, the notes in circulation increased from 20,286,950,000 marks to 62,128,625,000 marks, whilst the gold holding showed little change; on the latter date it was 2,098,593,000. Speculators have not been paying so much attention to the gold cover of the notes. Provided they are able by buying to send up the daily value of the mark or in sellutor, reduced the same well satisfied. Much of ling to reduce it they are well satisfied. Much of the changing is done with borrowed money, the bills and drafts and notes being held as security by the lenders Naturally, whilst there is a continued fluctuation in the value of the mark, commorce is difficult because the seller cannot have any security in regard to the sum he will actually receive.

# HOUSING PROGRESS.

PRACTICALLY norelief has yet been felt from the great shortage of housing accommodation, although measures have been taken during the past year which it is hoped will shortly result in a considerable acceleration of house building The number of new houses which had been completed up to September z last was less than 6.000, including s.000 which were completed with the exception of painting. Shortage of labour would appear to be one of the chief causes of the slowness of building operations, the number of men employed in trades in the building industry for part of the past year being considerably less than half the number employed in 1910, whilst the number of men in the various trades employed on state-aided housing schemes at the and of June last represented a small percentage of the total in the industry, e.g., carpenters, 4'3; hricklayers, 13 s. slaters, 25 s. plasterers, 5 c; painters, 5 c; plumbers, 2 s. Negotiations be-tween the Government and the Resettlement rency. When war ended with Germany trade began, and some hasis had to be fixed for the value of ourrency for exchange purposes. The per value of ourrency for exchange purposes. The per value of the German mark in pre-war times was as as to the £r. It is expected that in due course, when trade resumes internationally and all inflementities have been paid, that the mark of inflementities have been paid, that the mark of the £r. It is expected that in due course, when trade resumes internationally and all inflementities have been paid, that the mark of the £r. It is expected that in due course, when trade resumes internationally and all inflementities have been paid, that the mark of the £r. It is expected that in due course, when trade resumes internationally and sall inflement to speed up house utilities in the beginning of a soleme to speed up house of utilities of a soleme to speed up house of utilities of a soleme to speed up house of utilities of a soleme to speed up house of utilities of a soleme to speed up house of utilities of a soleme to speed up house of utilities of a soleme to speed up house of utilities of a soleme to speed up house of utilities of a soleme to speed up house of utilities of a soleme to speed up house of utilities of a soleme to speed up house of utilities of a soleme to speed up house of utilities of a soleme to speed up house of utilities of a soleme to speed up house of utilities of a soleme to speed up house of utilities of a soleme to speed up house of utilities of a soleme to speed up house of utilities of a soleme to speed up house of utilities of a soleme to speed up house of utilities of a soleme to speed up house of utilities of the Joint Industrial Council of the utilities of the Joint Industrial Council of the part of the middle of september at the beginning of their object the final decision and not been given the time of going to press the final decision had not been given the first of the first of the first of the first of the first of the first of the first of the fir

had been unable to obtain satisfactory tenders from contractors. The number of houses covered by these schemes was 5,695. Sanction had also been given to five public utility societies to build

r,ees houses by direct labour.

The financial difficulties connected with the housing problem have been responsible for the same by local authorities of Housing Bonds, and for the extension up to December 23, 1921, of the period in which houses may be completed in order to rank for the Government grant to private builders. Up to September at plans had been approved for the erection of 19,706 houses by private enterprise, involving an ultimate payment by the Government of £4,773,sga. The number of houses actually completed to that date was 1,507, and the grant paid in respect of these houses amounted to £320,356.

In August last a move was made by the Government to deal with the question of empty houses by the introduction of a Bill providing that local housing authorities should be empowered to hire compulsorily any house suitable for the housing of the working-classes which had been withheld from occupation for a period of at least three months. It was also proposed to give further powers to the Ministry of Health to check luxury building, and general powers to local authorities to provide houses for their own

employees.

The total number of house plans of local authorities and public utility societies approved by the Ministry of Health up to September x8, 1930, was 241,294, the total number of houses in tenders approved was 144,615, and contracts had been signed for 104,287 houses.

#### INDUSTRIAL COURT.

THE Industrial Court Act, that received the Royal Assent in December, 1919, placed on a permanent basis the work of the old Wages (Temporary Regulation) Act of November, 1918. Under the latter Act, 930 awards were made by the Interim Court, and on fifty occasions (subsequent to which twelve orders were made) the Labour Department was advised by the Court. engineering trade had an arrangement whereby a four-monthly meeting was held under the Court. The 1919 Act confers powers upon the Minister of Labour to appoint a Court of Enquiry to investigate the causes and circumstances of any existing or apprehended trade dispute. The Court thus appointed has no power in itself to settle a dispute by arbitration. It can only investigate, report and recommend. madent Court of Arbitration is created under Section a of the Act to settle any dispute by arbitration after other means have failed

First important case under the Act was the Dockers' Enquiry. A general request was made by the Port Labour Employers and the Transport Workers' Federation for the investigation of the programme of claims presented by the workmen. First sitting was held on Feb. 3, 1920, and soth, and last on March zz. Enquiry was open to the public; Press paid considerable attention to the evidence; the dockers' case was stated in a remarkably efficient manner by Mr. Bevan. Men wanted Ss. per half-day for eleven half-days per week as a basic wage, plus certain other advan-tages. On the production of the Report of the Court, both sides accepted it and endeavoured to work out amicably the findings. In October,

discussed by both parties.

Second enquiry of note was that in response to a demand from coal tippers of South Wales for a substitution of two continuous shifts for the existing broken shift system that involved night work. Court supported the trimmers, and the employers granted the demand. Up to October, 1980, 300 cases had been submitted to the Courts, and the tendency was for the Courts to recommend that wages had reached their maximum.

#### INSURANCE

#### UNEMPLOYMENT INSURANCE.

A PLACE among measures of social reform passed by the present Government must be given to the Unemployed Insurance Act. zoec, which came into force on the 8th November last. Under this Act the total number of persons insured will be ultimately about 12,000,000, including non-manual workers in receipt of remuneration not exceeding in value £250 per annum, compared with about 4,000 covered by the Acts of x9xx and x9x6. estimated that 8,000,000 will be insured under the general scheme of the new Act and ultimately 4,000,000 will come under special schemes which may be set up by industries which provide benefits at least equivalent to those of the general scheme. Compulsory insurance is extended to substantially all persons for whom health insurance contributions have to be paid, except out-workers and persons employed in agriculture and private domestic service. The employees of local anthorities, tailways, and certain other public utility under-takings, and persons with rights under a statutory superannuation scheme are also excepted if the Minister of Labour certifies that they are not subject to dismissal except for misconduct, and are employed under conditions which make insurance unnecessary, but generally the exceptions include only persons who are excepted from the Health Insurance Acts. A distinction from Health Insurance is that workpeople over 70 are insurable, except in the case of Old Age Pensioners, who are excluded from insurance. Contributions and benefits have both been considerably increased and under the general scheme are as set out below.

Contributions :-

	From Employer.	From Employee.	Total.
Men, 18 and over	3½d.	4d.	8d.
Women, 18 and over		3d.	6½d.
Boys, 16 and 17	sd.	zd.	4d.
	sd.	z¹/₂d.	3½d.

For every contribution paid in respect of men and women the State contributes ad. and x3 respectively and proportionate amounts in the case of hoys and girls.

Benefits are at the rate of 13s, per week for men and 13s, per week for women. Contributors under 18 are entitled to half the full rate. No under is are entitied to hair the run race. We benefit is payable for the first three days of unemployment, which constitutes a "waiting period." Thereafter it is payable for a maximum of z weeks in any insurance year, subject to the limitation that the amount of benefit drawn must not exceed the proportion of one week for every six contributions. Before an insured erson can become entitled to benefit, not less person can become envision to person paid in than as contributions must have been paid in the first as months respect of him; but during the first is months

of the Act this condition may be satisfied by the means of 4 constitutions. The Act specifies the other conditions which must also be filled. Disqualification from benefit ensues, faintles. Descriptions from benefit ensure, among other reasons, if (a) normployment is due to a stoppage of work owing to a trade dispute, of to mesonauch, or to leaving employment whentarity without just cause; (b) the insured person it in receipt of sickness benefit, or an among the leaving under a special. old age pension, or benefit under a special acheme.

Insured contributors who have made 500 contributions (or a smaller number if over the ge of 55 on entry into insurance) will on reaching the age of to be entitled to a refund of the amount of their own contributions, less any

benefit paid, together with interest

Special schemes which may be set up by industries which contract out of the general scheme with the approval of the Minister of Labour will be administered by a joint board of Managers representing employers and employees on behalf of the industry or industries conperned, and the form and amount of the contributions and benefits will be determined in the scheme itself, and need not be the same as those laid down in the general scheme.

# HEALTH INSURANCE

The National Health Insurance Act, which The National Relative Insurance Act, which came into force on July 5 last, affected over 13,800,800 male and female workers, and almost all employers. Generally speaking, all manual workers whose remuneration does not exceed £350 per annun, come within the scope of the Act Rate of contributious payable by employers and employees and benefits are increased as existence. follows :-

Contributions.—Apart from employed persons to whom certificates of exemption have been granted (in which cases the employer's rate is gd.), the weekly contribution payable in Great Britain is increased from pd. to tod. in the case of men workers and from dd to gd. in the case of women workers; the workers share, ordinarily 4d. for men and 3d. for women, being increased to 3d. and 4d. respectively. The balance to be met by employers therefore becomes 3d. in each case instead of 3d. In cases where a worker aged 18 or upwards is not in receipt of board and lodging from the employer and the rate of remuneration does not exceed 4s. a working day, the amounts to be deducted from the worker's wages are less than 3d. for men and 4d. for women -- e., where the rate of remuneration is over 3s. but not over 4s. a working day—4d. for men and 3d. for women, where the rate of remuneration is not over 3s a weeking day no deduction can be made from

werking day no deduction can be made from where. Benefits.—The ordinary rates of sickness benefits at the creation was to use, per week in the case of mad, whilst women's rates have risen from 9s. 5d. to use, per week. But before the expiration of use, weeks from entry into insurance and the payment of see contributions, the benefits per week are for men as and for women 7s. 5d. Displement benefit has been increased for both men and writism from 3s. to 7s. 5d. per week, and meternity beheaft, is now as instead of use, under the old Act. Canadorium beheaft, so lar as Great Britain is concerned, estate to be increased among the benefits conterned of season to be increased among the benefits conterned by Part 2 of the Act of 1921, but medical benefit is to

include treatment and attendance in respect of tuberculosis. The total annual expenditure on benefits will, it is estimated, appricable \$30,000,000. It will be seen that the rates of benefits have been increased in greater proportion than the contributions of the workers, sickness benefits for men having been raised so per cent, and for women se per cent, disablement benefits se per cent, and the maternity benefit 32½ per cent, whilst the weakly contributions have been increased by se per cent. for men and 33% per cent for women. Further increases in benefits may accrue in some cases from surplus funds of Approved Societies.

Important new provisions for the payment to Insurance Committees of sums in respect of medical benefit and the cost of administration are contained in Clause 7 of the new Act.

# INDUSTRIAL ASSURANCE.

A scathing report has been made during the past year by the Board of Trade Departmental Committee, appointed under the chairmanship of Lord Parmour, to enquire into the working of Industrial Assurance Companies and Collecting Societies The magnitude of the interests which came under the review of the Committee is shown by the fact that the total amount of premiums received in respect of policies in the Industrial Branches of the companies and societies in the year tool exceeded £3,000.00. the number of policies in existence at the end of that year being about \$5,000.00 whilst the total number of whole time and spare time agents and collectors employed was esti-mated at 70,000. The institutions affected comprised 18 Companies registered under the Companies Acts, and 56 Collecting Societies registered under the Friendly Societies Acts. The abuses to which the present industrial assurance system lends itself, and the extremely unsatisfactory conditions under which it is worked, are fully exposed by the Committee, who are agreed that there is urgent need for many reforms, and recommend that legislation should he undertaken without delay

Industrial assurance, which consists in the assurance of small sums payable for the most part on the death of the life assured, in consideration of the payment of weekly premiums, appeals chiefly to the working classes, and has a possible clientele of about 3,5000,000 persons. It is evident that many millions are assured under two or more policies, and policies on single life are frequently held by different persons. Great laxity has prevailed in this respect, and in spite of legislation the Committee state that it is doubtful whether the practice of issuing illegal policies has entirely ceased. But there is no doubt that in many cases premiums continue to be paid on illegal policies effected before age, to the advantage of the companies and their agents, but with doubtful security to the holders of the policies. The poor return received by she policy holders generally is referred to in the Report, which states that about 44, per cent, of the total premium income on industrial policies is absorbed by expenses and commission, and in the case of companies by dividends to shareholders—in other words, of fast, poor, one paid yearly in premiums by the working-classes, only £14,000,000 back to them, and £11,000,000 are absorbed in expenses and dividends.

The great majority of policies affected large. there is no doubt that in many cases premiums

The great majority of policies affected lapse

within a short time. In the case of one of the largest companies (which, in this commexion, is in no way exceptional) the Committee found that is the ten years, 1903-18, 3,3e,35 policies were issued, while 6,426,323 lapsed. It is probable that the premiums paid on these latter policies amounted to £500,000, practically the whole of which must have been absorbed in new business observed which were added to the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the committee of the c charges, chiefly procuration fees and commissions paid to the agents. Taking all the offices together it is probable that lapses of policies in the year of issue, or in the year following, reach an annual total of 5,000,000

The question of nationalisation of industrial assurance was not brought prominently to the notice of the Committee, but they were of opinion that, as the system is constituted, the State could not properly undertake its administration. Their proposals, which therefore contemplate the continuance of the present societies, include (a) the bringing of these under the supervision and control of the Chief Registrar of Friendly Societies; (b) the extension of the block system of collection; (c) the prohibition of payment to agents of procuration fees for new business; (d) the payment to policy holders of a busines; (a) the haymant to policy loaders of the profits than is accorded to them at present; (a) the securing to policy holders of some return when premiums are not continued: (f) statutory forms of proposals and policies; (g) penalties for assisting in effecting policies without insurable interests; (h) for audit purposes, the employment of a public auditor instead of a person "carrying on publicly the business of an accountant.

# INTER-IMPERIAL COMMUNICATIONS.

(a) BY CABLE.

THE devastation in our Imperial Cable lines must be counted as one of the more important outcomes of the recent Great War. The number of lines interfered with meant lasting traffic congestion and delay in those still left intact; but this state of things was almost equally contributed to by (a) the increased demand for communication between different branches of the British Commonwealth, and (b) the wastage in ships. Neither the subsequent return to cable codes without censorship, nor the gradual renewal of cables, at all met the difficulty. Apart from the Home Government and the Dominions carrying on much more communication than in pre-war days, there is a markedly increased tendency on the part of the British communities to converse telegraphically as well as in every other way. Owing to the prevailing shortage of labour and to the cost of materials, the demand has not yet been by any means met-a demand which should proceed apace if we are to achieve the mereased production that is so essential for British Trade and Commerce, let alone high political considerations. Moreover, to recent invention has so far come to the rescue to any adequate extent practically.

In the face of much opposition from the Cable Companies as well as H.M. Post Office, the late Sir Sandford Fleming, K.C.M.G., in Canada, and Mr. (now Sir Charles) Bright, F.R.S., in this country actively, and for many years, urged the construction of the All-British Pacific Cable, which was eventually laid in ross. This line proved its value times out of number during the war. Its traffic has since remained so large that duplication is now more than ever essentialapart from the strategic objections to reliance on

apart from the strategic objections to reliance on a single fine on any given route.

Again, ever since the Western Union Pales graph Company's America took over the contents, in span, of all our British Trans-Atlantic Carles, our communication with Canada--and, who she Pacific line, with Australagia--has me there as a satisfactory a footing as is desirable from an Imperial standpoint. This danger was pointed to by Sir Charles Bright as soon as the Government (represented by H.M. Environment, descriptions). ment (represented by H.M. Postmaster-Gene was approached, over the transfer of landing rights.\* Had the Post Office refused to transfer rights.\* Had the Post Office refused to transfer these rights to the American Company, the deal —which was quite contrary to national interests —could not have gone through. The Postmaster-General excused himself for agreeing to the transfer on the grounds of securing a reduc-tion of rates in exchange, but no such reduction ever transpired. The War has fully borse out this view; and though one of the two former German Atlantic Cables (interrupted within six German Atlantic Canies (interrupted wighin at hours of the declaration of war) was evertually turned to British account, this has never given much satisfaction. Thus, when, towards the close of 1919, the Western Union Company had repudiated their op years' lease of the Direct United State Cable (originally laid in 1914) on account of its constant inoperation, negotiations for the nurchase of the latter were embarked on account of its constant inoperation, negoniarous for the purchase of the latter were embarked on by H.M. Government, this having for many years, physically speaking, formed a direct Albritish link between Ballinskelligs Ray (Ireland) and Halifax (Canada). This line, like the late German Atlantic Cable, is to be worked as a direct link with the Imperial Pacific Cable, by W M. Post Office—the department, as if by H M. Post Office—the department, as it happens, which, as stated above, had entirely failed to recognise the seriousness of this British Cable falling out of British control, just as it had previously opposed the scheme for an All-British Pacific Cable.

Whilst there has been much talk about All-British ('ables for the last 30 years, it is only since the war that the United States have taken up the same ides. Our cousins over the water, on the other hand—moving more promptly in such matters—have already taken active steps to establish, on a low rate basis, "All-Americau" Cable links with the object of embracing (talegraphically speaking) the whole of the North. Central and South American Continent, as well as for fostering friendly relations between the republics here involved. The United States Government is taking an active part in this matter, being fully alive to the strategic, politi-cal and commercial value of American owned and American controlled cables.

Thus, if we, in this country, are to maintain the position we should hold, as the original pioneers of Submarine Telegraphy, we shall require to act a little more speedily than we have dure to act a nature more specially than we have done of late years. There is some prespect-of this now, for an Inter-Departmental Imperial Communications Committee was established at the beginning of 1916, under the Chairmanning of the Colonial Secretary (Lord Milner).

This was the outcome of a suggestion of a from Sir Charles Bright. By its institution, whereas formerly all telegraphic matters were solely controlled by H.M. Post Office, attended now rests equally and combinedly with all the

<sup>\*</sup> Address to the London Chamber of Chamber Nov seth, resz (L C.C. Tract No. 80).

Government Departments concerned, represen-tatives of which meet periodically to settle things as they arise—whether onnerming Cable, Wireless or Air communications. This Board of Control ought to achieve much in National, Spaning and Commercial interests as well as in Stratigic and Commercial interests as well as in the interests of the British public generally.

# (b) BY WIRELESS TELEGRAPHY.

The development and application of Wireless Telegraphy under the auspices of the Admiralty (and with the assistance of the Marconi Comcany) was one of the most remarkable features of the war. There is to-day little to choose between the actual working speed attainable through a cable and that, under the same conditions, by Wireless of a correspondingly up-to-date character. Indeed, so far-reaching and important have been the technical developments of this Wireless) method of communication\* since hostilities commenced that it is clearly destined to be surped to something like the same account between distant lands as has already taken effect for marine purposes.

We now need (z) the All-British Wireless Chain without much further delay, (a) every inter-Imperial Cable connected supplemented by Wireless, and (3) a highly-developed Wireless News Service established for the prompt and aynchronous dissemination of news betwixt all branches of the Empire, this being a field for which "Wireless" is especially well adapted.

It has to be remembered that Wireless can in some instances be satisfactorily used and maintained where the same does not apply with a Cable. Moreover, Wireless Stations can usually be more speedily established than a Cable can be

made and laid.

But just as we have talked about All-British Cables out of all proportion to what has been achieved, so similarly, though the Imperial Wireless Chain is becoming quite an old story in theory, nothing whatever has yet been done in the matter. In November 1919 a Committee was appointed under the Chairmanship of Sir Henry Norman, M.P., with fairly wide terms of reference, to go into the whole question: their Report [Cd. 777] was issued in June, but at the time of writing the Government have taken no steps. The Marconi Company have for long been prepared with a separate scheme of a highly enterprising nature, but that also awaits Govern-

ment decision,

Meanwhile, "Wireless" is proceeding apace in the United States, whilst Germany is fast recovering from the war destruction she ex-perienced at our hands over her Wireless Stations.

# (c) BY AIR.

The security of the British Empire seems now to be far more dependent on Aerial Supremacy than on Naval or Military action. This being so, it becomes essential that we should not allow our Air strength to fall below a certain figure. It happens, however, that this strength can be turned to admirable account for other purposes in time of peace, i.e., for the purpose of civil aviation. It should be added that, whilst a fighting air plane cannot readily be converted into a commercial air plane, the latter can comparatively readily be turned to account for the purposes of warfare.

The principal pioneers of the Air were largely instrumental in winning the War. They exhibited much enterprise in the development of aviation; and the position is such at the present time that, unless the Government take some practical steps to keep aviation alive, it will be impossible for it to proceed. Having regard to the enormous amount of aviation that was accomplished during hostilities it may well seem strange that, so far as this country is concerned, Civil Aviation has not yet been made to pay its own way successfully. The reasons are, generally speaking, jointly or severally as follows:—

(a) That for a considerable time—and in a lesser degree still-non-economical war machines were in use; (b) present cost of petrol; (c) lukewarm encouragement of the Post Office, which also fails to take ordinary business methods to bring Air transport to public notice; (d) the public still regarding aviation as somewhat dangerous; (e) the present cost of transport by air; (f) business men are not yet satisfied as to its reliability. So far as safety goes, it will be found on close investigation that the percentage of accidents in the Air are far less than those associated with Road or Rail, and as regards the cost, the enormous saving of time when travelling by air-especially over considerable distances-should be taken into fuller account. This time advantage would be more marked in the case of the mail were the Post Office to establish better connecting arrangements at the terminals

It should also be remembered that a passage in an air-ship (e.g., across the Atlantic) is far less troubled by weather conditions (in the matter of

fog, etc.) than any ship at sea.

These are days when the country needs to be economical; but the Government have plenty of scope for further economy in other directions without exercising a false economy by failing to recognise—as other Governments have donethe necessity of encouraging Civil Aviation in the interests of national trade, as well as, indirectly, for national security. If the Anglo-Continental Air Service is to proceed in a healthy way, the Government must come forward either with some sort of guarantee, or else, as substantially in the case of cables, with a material subsidy. Commercial firms should also show a little more inclination to encourage enterprise in aviation, when it is remembered that a business man can now, thanks thereto, breakfast in London, lunch in Paris, and be back in London in time for dinner.

Looking ahead, however, whereas all methods of communication and transport are of use, the special scope for Aviation would appear to be over great distances, and for connecting up those parts of the Empire which are, at present, ill provided with systems of communication or transport. Here, however, material preparation is entailed in the matter of Air routes, such as must necessarily be carried out by the Air authorities.

Over the War we undoubtedly achieved first place in the Air. On the other hand, both Germany and France, as well as the United States, have been officially far more active in the development of Civil Aviation. In all these other countries, and in Italy, Air lines have been operating remainded the been operating remainded the beautiful day had been operating remainded the beautiful day be been operating remainded the beautiful day be been operating remainded to be been operating remainded to be been operating the beautiful day be been operating the beautiful day be been operating the beautiful day be been operating the beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beautiful day beaut operating regularly day by day. In the United

<sup>•</sup> Special mention should be made of the thermionic oscillation valve, largely originating from the work of Dr. J. A. Floming,  $\nu$  m.s., as Reisstiffe Adviser to the Marconi Company, is addition to that of Dr. Lee De Corest.

States, Aviation has lately been preceeding at a great pace—with a line from New York to Ohteago—and in Germany, metal air planes are the order of the day, that country being also convinced that inture wars will be settled in the air.

It has of late become a commonplace that flagland ceased to be an saland when men learned to fly. The welfare of the British Empire is likely to be considerably influenced by our Air policy. In days to come air stations will be a least as important as coaling stations are now. It may almost be said that in the matter of imperial routes everything is to hand for us, so to speak—seeing that our possessions are dotted, more or less, all over the world. It suiely believes us, therefore, for the various reasons set forth, to take up aviation in earnest.

Aviation should be put on trial, and be regarded for some time from the point of view of what it achieves for the country, its security and welfare—much in the same way as we regard our Navy and Army. This view is already accepted so far as the Air Force is concerned, but expenditure on Aviation generally (to keep it alive) would, as already indicated, serve the double purpose.

#### LABOUR QUESTIONS.

# THE LABOUR PARTY.

THE second Annual Conference after the Labour Party's reconstruction was held at Scarborough, June 28-25, 2020, when 2,200 delegates, representing a membership of 3,300,000, attended, with Mr. W. H. Hutchmson, of the Amalgamated Engineers' Union, in the Chair. The Party, whose membership is open to "all producers by hand or by brain," issued at the Conference a programme that was described as "a lalour manifesto to the nations and the world." The chief points were the revision of the Peace Treaties with a view to speedy and equitable settlement of international disputes in Europe; end of intrigue abroad and interference by military missions in local governments; denunciation of secret agreements and treaties; economic arrangements to cope with the famine threatened in Central Europe; and reconstruction of the basis of the League of Nations. A deputation from the Party was to wait upon the Prime Minister to report the investigations of the Party's representatives in Finland, Hungary and Russia.

Conference re-affirmed belief in 'nationalisation with joint control between the representatives of the producers, consumers, and the State, is the only antisfactory solution of the infining problem." A resolution to join the Third (Missow) International was rejected upon a card vote by a,940,000 to 22,900. The Labour Party thus remains affiliated with the Second (Amsterdam and Loudon) International. A Poolibition motion was defeated by 2,62,000 card votes to 472,000, whilst a resolution, in favour of Local Option was accepted by 2,000,000 and votes to 563,000. Belf-determination was of all armed forces), Egypt, and India. The customary resolutions in favour of various socialistic projects were adopted.

To meet the expenses of political action, it was found necessary to increase the affiliation fee for each member in the societies forming the

Labour Party from ad, to 3d, per sunum, and the new froome was estimated at £45.50 fer the ourset year. England was to be divided into eight distribes, with a responsible organism; for each in order to spread propagands. Henry Labour candidate has to sign the constitution of the Labour Party before he or she is adopted. The Eventive tommittee constats of representatives from trade unions, local societies, and kindred organisations in the Party, and women's societies. The Eventive is dominated by the general workers, miners, railwaymen, sugineers; and textile workers' unions. For the Labour Passes Memorial the sum of £12,000 was collapted by the Party.

At the Annual Co-operation Congress in May, 1920, at Bristol, a Coventry representative proposed that the Co-operative Movement should affiliate with the Labour Party, but an amendment was carried to refer the proposal to the District Conferences in readiness for the Co-operative Congress of 1922.

# THE I.I.P.

The Independent Labour Party (known more familiarly by its initials I.L.P.) was established; at a Conference at Bradford in Jan., 262. The Party has decidedly pacifist tendencies, though it ams at collective ownership. It subscribes to the Second International. The a8th Annual Conference was held at Chasgow on April 4, 1980, when Mr. Philip Snowden took the Chair. There was a loss of £8,000 on the year's working, and an increase in subscription was found necessary. The Party does not appear to be making very great headway, in spite of the fact that its leaders include Mr. J. R. Macdonald, and it owns the Labour Leader, besides controlling a National Labour Press.

# THE COUNCIL OF ACTION.

With the stated purpose of organising a protest against active intervention in the war between Poland and the Soviet Government of Russis, an emergency meeting of the Parliamentary. Committee of the Trade Union Congress, Parliamentary Labour Party, and the Exceutive. Committee of the Labour Party was held on Aug. 9, 1930. A Committee was appointed to give a lead, the committee was appointed to give a lead, the committee being known as the Council of Action. Five members were nominated by each of the bodies mentioned, and eight further labour leaders were co-opted on the following day. Mr. Lloyd George gave the Council of Action an interview on Aug. 22, but the result was not satisfactory to the Council. A special Labour Conference was called by the Coff. At Central Hall, Westminster, for Aug. 23, when 1,044 delegates (689 from trade unions and 335 from labour parties and societies) attended and protested against any was with Russis.

The idea of Councils of Action spread to the country, and in most industrial centres local. C. of A. were formed. It was not a question of election to Councils in any democratic way. Leaders were simply nominated by themselves and friends, and the local Cusnells of Action came into being. They were without powered action except to eall public meetings and estimetery to impress their importance upon the public. Of course, the advanced section of the labour povement saw more in the idea. Orangia of Action were to be another name for local Soviete on the Bussian plan, but they died dewnalmost as quickly as they were formed. The

Government had denied any intention of declaring war, but as war was not declared the Council of Action thinds that they had stopped the was. What the central Council of Action really meant was stated by Mr. J. H. Thomas in his address to the Trade Union Congress on

September 8, 1989:
"Off course of action was hold; that it definitely challenged the Constitution there can be no found. Dangerous as was our remedy, it was instified by the results. . . . Our action does not carry with it an accimation of the Soviet method of government, and many who advocate a Russian peace do not subscribe to its methods. The Council of Action was called into being to secure the complete independence of Poland and peace with Russia, and having done that it will be content with the result of its labours."

British labour tried to enlist the sympathies of the French labour leaders, but the two envoys from London were asked to leave the country by the French Government. The Communist Party attempted to form a federation of Councils of Action during Oct., 1920, and were at the same time agitating against the non-elective manner of choice of members.

#### AMALGAMATED ENGINEERING UNION.

The Amalgamated Engineering Union came into existence on July 1, 1980. Eleven existing trade unions, representing 450,000 members, amalgamated in order to form one union for the industry. The chief Union was the Amalgamated Society of Engineers with 326,000 members; the other societies were Steam Engine Makers, General Toolmakers, Machine Workers, Instrument Makers, Smiths and Strikers, Brassfounders (3), Brass Finishers, United Metal. President, J. T. Brownlie; Gen. Sec. Tom Mann. The change in conditions of employment of engineers was stated as in 1282 50-hour week, with £x \$\sigma\$ wages, and 1980, 47-hour week with £4 7m.

#### LABOUR UNREST.

By the end of Oct , zoso, the total for the whole is of zozo was surpassed in strikes, workmen involved and days lost. Comparative figures are :--

Year	Disputes	Employees (in 000)	Days lost
1905		94	2,470
1918	. 857	1,463	40,915
1913		689	11,631
1918	1,252	1,097	6 #37
1919	2,413	2.750	34,000
OBQI	1,499	798	9,765

(Jan.-Sept. only.)
Wage questions have predominated. Hours of labous, employment of non-unionists and objection to disciplinary action on the part of employers have been responsible for many strikes. An exceptional strike that led to a general lockout began at Cannuell, Laird's works, near theffield. Employees objected to non-union foreman, and a lockout began on Sept. 4, when the Ministry of Labour intervened with a Committee of Raquiry. The year's strikes were dominated by the miners strike of Oct.-Nov., spec, in support of increase of as per shift.

Jain, opened well with the end of the tronmoniders' strike on Jan an, after having been in existence since Sept. as 1999. Increase of sgs. had been demanded, but men esturned after hallot on gs., an amount they could have had in the first instance. 6g. sec were directly concerned, and much unemployment resulted in kindred industries. Much public interest was displayed in a strike of the agenta of the Pearl Assurance Co. for minimum weekly wage of £3. The trausfer of certain men from the Dockers to the Railwaymen's Union resulted in a strike of 5,000 man at Barry.

men at Barry.

In Yeb, the chief strike was that of the Rhondda miners against disciplinary action on part of employers. A 40 per cent, wage increase was demanded by the 5, Wales steel workers, and failing grant the men went on strike, only to return to resume negotiations after xx days idleness. During March, 69,000 of the x34,000 workpeople involved in the strikes were miners. Considerable interest existed in the enquiry into the dockers' claim for better conditions, and the report was published at end of month. April was remarkable for the number of small disputes—the average for the \$4 was less than 3,000 workpeople. Miners were again troublesome, mostly over individuals dealt with by the managements. Unrest was evident again in the cotton industry, when demands were being made for increases of 300 and 350 per cent. on pre-war

May was an average month. There was danger of a strike of vehicle workers in London. Railwaymen in Liverpool were delaying carriage of goods by working strictly to the rule. Purely political matters were being brought before the trade unions, and there was a constant endeavour from this time to use the strength of the trade union movement to influence the Government in regard to Irish and Russian policies. In Scotland zz.ccc joiners went on strike for ss. 6d. per hour Workers during June were still attempting to interfere in workshop practice in going on strike because of the dismissal or punishment of workers. Strikes affected only small numbers of workpeople, the average number affected being less than 500 per dispute. In July the gasworkers went on strike in the provinces in spite of the appeals from responsible leaders, the object being to secure higher increases. The tendency was to make the minimum wage of the unskilled and partially skilled men £4 weekly in all industries. There was an attempt at a general strike in Ireland on political matters. and at the end of July a labour conference of 1,000 delegates in Glasgow decided on a no-rent strike as a means to appeal against rent increases

Political matters entered largely into trade Councils of union matters during August. Action were formed to threaten the Government with a general strike because of a possible war with Russia. Otherwise the strikes were large in number, but concerned relatively few people. A strike of so,ooo textile workers of Oldham who refused to accept the terms isid down by their union was the largest of Sept. The average people affected by the remaining strikes was just over see. There was an attempt at a general strike of vehicle workers (6,500 took part) for an increase in wages. Oct, was very un-settling. The shadow of the miners' general strike loomed in Sept., and the end of Oct, witnessed the long-threatened dispute. Negotiations broke down and industry suffered considerably. Certain of the advanced sections of the labour movement looked to the strike to mean a general industrial upheaval. Happily the rallwaymen and transport workers, who were allied with the miners, were content to mark time and only morally support the miners.

# THE INTERNATIONAL

The International, i.e., the congress of socialist organisations of various countries, dates from ass. The International formed then disappeared in 1872, following the failure of the Paris Com-The Second International came into being in 1868, when suggestions were made by the working class organisations for a Congress. Before anything definite was settled a split occurred in the Socialist section of France, with the result that two rival Congresses were held in Paris in 1889. Negotiations led to co-operation, and in 1891 a united Congress was held in Brussels. International Congresses were held in Zurich (400 delegates) in 1893; London (800) in 1895; Paris in 1900, when an International Bureau was established; Amsterdam in 1900, when the British Labour Party took part for the first time; Stuttgart in 1907, at which the Women's International was established; Copenhagen in 1910 was visited by 887 delegates from 33 nations—the German delegation opposed the idea of a general strike to stop war; Bale in 1918 with 555 delegates from as countries.

Second International - Informal conferences were held in Berne and Lausanne in 1919 with the object of establishing the International. The socialists by parliamentary action carried on the old and Second International. The "socialists by revolution" were headed by L-vin, who established a separate Congress at Moscow known as the Third International. The Second International met at Geneva on July 37, 1920, when Mr Tom Shaw, M.P. took the chair. The delegates numbered, yet of whom as came from gates numbered zeo, of whom as came from Belgium. ('amille Huysmans resigned the secretaryship, and it was decided to transfer the Bureau to London. Discussions took place as to who were the real authors of the War; admission of Germany to the Congress: Bittain's help to the starving, if any, in Central Europe; League of Nations: Socialism, against which resolution the British voted as it was not strong enough; Beigium's resolution to let bygones be bygones in regard to the war; against Sovietism —a resolution supported by T. Shaw, Vandervelde (Belgium), and Scheiderman (Germany), whilst Troelstra and Neil Maclean accused the Congress of timidity. Final session was held on Aug. 6. Next Congress is to be held at Brussels in zgss. The International Committee includes Messrs. Henderson (President), J. H. Thomas, and J. R. Macdonald. A proposal at the British Labour Party Conference to withdraw from the Second International was defeated.

Third International.—A secret Congress was held in Amsterdam early in secret to lay the foundations of the Moscow or Third International. Delegates to Moscow arrived on July 22, 1980, from 28 countries, including Chiua, Japan, Korea and Mexico. The Moscow wireless Japan, Mores and Mexico. The Moscow wireless announced that the delegates "are united with one object and one idea, i.e., through the Third International to establish Communiar régime throughout the world." On July 30 Lenin stated that the "dictatorabin of the proletariat was unthinkable without assault and violence." Zinovieff. (Aprelseum) is President of the Excentive Committee; as such he attended the Halle Conference of the German Socialist Party of Oct. The Conference of the German Socialist Party of Oct. of Oct., 1992. Considerable division exists amongst the Soulalist hodies of the world in supporting alther the Second or the Third International.

# NATIONAL COMMUNIST PARTY.

Scattered groups of communicate west deligibles to London on July 2s and Aug. 1, where we national Communist Party was formed with Mr. Arthur Macmanus as Chairman. The Farty is in favour of the establishment of a water of Soviets or Workers' Councils, somewhat of the lines of those existing in Russia. The Party is a constant of the party in the party of the statement of the machinement on its machinement. It has lines of those existing in Russia. It has far from unanimous on its methods. It has applied for amiliation to the British Labour the applied for amiliation has been refused. The Party, but its application has been refused. The Party supports the Third (Moscow) International, and has a weekly organ, The Communit. On July 20, 2900, M. Lenin sent a message welcoming the formation of the Party.

#### THE O.B.U.

An industrial organisation conceived by prominent Socialists of Canada who hope to effect revolution by means of strike. The idea effect revolution by means of strike. The idea is the organising of all workpeople into one union, the pledge of membership being: "I, the undersigned, do hereby declare that, by the help of God, I will strike against the time of money at any time I may be called upon." Uriah Smith originated the Knights of Labour in Philadelphia in 1869, but the sabotage of the Gould Strike in 1889 condemned the Knights of Labour publicly and the society was dissolved. The chief plank of the Knights of Labour was one socialist organisation for all workpeople. The Socialist Trade and Labour Alliance grew The Socialist Trade and Labour Alliance grew from the remnants of the Knights of Labour in 1893 under the leadership of Daniel de Lion, but in 1903 the Alliance ceased to exist. Its leaders formed the Industrial Workers of the World at Chicago in 1905. The One Big Union had its first convention in Calgary in 1919, and a second was held at Winnipeg in January, 1922. In the new Constitution adopted at the second convention the O.B.U. "calls upon all workers to organise irrespective of nationality, sex, or oraft into a workers' organisation." Apparently the O.B.U. was established by the I.W.V. to mislead those Canadian workers who fought shy of the those Canadian workers who fought shy of the I.W.W. A Laiour Church has also been es-tablished by the O.B.U. and the Russian Soviet representatives in America are known to be in touch with the leaders of the O.B.U. At the beginning of seas the O.B.U. had 42,250 members attached to zer units. The total membership of all Canadian trade unions on Jan. x, 1980, was 378,047.

#### THE LAMBETH CONFERENCE.

THE sixth Lambeth Conference was held during July and August last, when age Bishops in communion with the Anglican Church assembled at Lambeth Palace from all parts of the world to discuss matters affecting the welfare of the Church and other questions of current impor-tance. The subjects dealt with covered a wide field and included the Re-union of the Churches, the Ministry of Women, Missionary Work, Marriage and sexual morality, Spiritualism, Christian Science and Theosophy, and sister-national and industrial questions. Each 46 these subjects was considered by a committee of the Conference and evidence was received from expert witnesses, lay men and women, is addi-tion to clergy. The Commissions reports were then discussed by the whole Conference and a series of important resolutions passed. The most widely-discussed of these resolutions are

816

those relating to Re-union. This question was considered by the largest committee ever appelled by a Lambeth Conference, on whose require definite proposals were laid down by the Rishops for the re-union of all the Churches. These proposals have set with criticism from Fros Churchmen, cotably as regards the fundamental conditions of episcopacy and re-ordination and forward.

ties put forward.

In view of prospects and projects of Re-union, they Conference decided that a Bishop is justified in giving occasional authorisation to ministers, not episcopally ordained, who in his jadgment are working towards an ideal of union such as is suggested, to preach in churches within his diocese, and to elergy of the diocese to preach in the churches of such ministers. But no approval was given to any general schemes of intercommunication or exchange of pulpits, or the celebration in Anglican Churches of the Boly Communion by ministers who have

schemes of intercommunication or exchange of subjets, or the celebration in Anglican Churches of the Holy Communion by ministers who have not been episcopally ordained.

With regard to the position of women in the Church, the Conference resolved that opportunity should be given to lay women to speak in consecrated or unconsecrated buildings, and to lead in prayer at other than the regular and appointed services of the Church; and that ordained women (desconesses) should be allowed to read the Hunday services and preach the sermon, with the consent of the Bishop, and to

prepare candidates for baptism and confirmation. Modern movements of thought connected with Spiritualism, Christian Science and Theosophy received a large measure of attention from the Conference, which recognised that new phenomena of consciousness have been presented to us, which claim, and at the hands of competent psychologists have received, careful investigation and as far as possible the application of scientific method. But such solentific researches have confessedly not reached an advanced stage, and we are supported by the best psychologists in warning our pouple against accepting as final theories which further knowledge may disprove, and still more against the isdiscriminate and undisciplined exercise of psychic powers, and the habit of recourse to scances, seems and mediums. As a result of the consideration of the subject of veneral disease the Conference expressed its condemnation of the distribution or use of prophylactics on the ground that they were an invitation to vice.

# LICENSED PREMISES IN LONDON.

The total number of premises licensed for the retail of intoxicating liquors in the Administrative County of London in April, 222, the latest date for which full details in connection therewith are available, was 8,75. The on-licensed premises, numbering 6,097, comprised 4,378 public-bouses, 2,297 beer houses and 35s hotels, restautistic to. The total of the off-licenses was 2,79. The distribution of public-houses and heer-houses is shown in the following table, which gives for each metropolitan borough the total number of houses, population, and the number of acres perchause.

Since the Licensing Act, said, came into operation new licenses have being granted in respect of as premises. Of three we are still licensed, and with the exception of one public-house all are goes or restaurants. On the other hand over

see on-licences have been extinguished during the same period, these comprising 393 publichouses and 574 beer-louses. The amount awarded as compensation for the loss of these licences purports to represent in each case the difference between the value of the premises as licensed and their value without a licence, plus the amount of any depreciation of trade fixtures arising by reason of refusal to renew the licence. The total compensation awarded in respect of the 395 public-houses amounted to £1,091.123, an average per licence of £2,562, or 29½ years purchase of the rateable value. In respect of the 314 beer-houses, £1,093.376 was paid, an average per licence of £3,062, or 42 years purchase of the rateable value.

#### LOCAL OPTION IN SCOTLAND.

THE coming into force on June x list of the provisions of the Act passed in 1913 relating to local option has given the electors of Scotland the opportunity of expressing their opinions on the drink question. For the purposes of the "Act to promote Temperance in Scotland" the country is divided into areas—burghs, wards of burghs, and parishes—and it is provided that if so per cent. of the local government electors in any area sign a requisition demanding a poll, then the local authority shall cause a poll to be taken. Immediately on the Act coming into operation, steps were taken throughout Scotland by the temperance party to obtain requisition forms from the local authorities and the necessary signatures in all areas where licensed premises existed. Organizations were set up throughout the country, with headquarters in flasagow, to carry on a campaign in Lavour of "Ro Hoence," and vigorous counter beasures

were taken by the "Trade." A resolution passed at a conference of the Scottish Labour Party urged all trade unionists to vote "no licence."
Three questions were placed before the electors

in November and December, viz., the adoption of (a) a no-change resolution, (a) a limiting resolution; or (3) a no-licence resolution. The adoption of a no-change resolution means that the discretion of the licensing authority in granting licences shall remain as before the poll. The passing of a limiting resolution prohibits the licensing court from granting a greater number of licensing pertificates than 75 per cent of the number in force at the date of the poll. For the period during which a no-licence resolution remains in force, the Act stipulates that no certificate shall be granted, except in the case of an inn or hotel, or premises structurally adapted for use and bond side used or to be used as a restaurant. In these cases, licences may be granted on the conditions that no drinking bar or other part of the premises is mainly used for the consumption of excisable liquors, and that such liquors shall be sold only to lodgers or residents, or persons taking a meal on the premises, for consumption with the meal. The decision of the electors remains in force for three years, at the end of which period another poll may be taken.

To carry a no-licence resolution requires at least 55 per cent. of the votes recorded and not less than 35 per cent. of the total electorate. limiting resolution is carried if a bare majority of the votes are in favour, and these represent not less than 3g per cent. of the electors. If a no-licence resolution is not carried, the votes recorded in favour thereof are added to those recorded for the limiting resolution. A no-change resolution is desmed to be carried if a majority of votes are in favour of it, or if neither of the other two resolutions is carried resolution carried comes into force on May 28, 1921. At the time of going to press results of the polls were not available.

# MAYFLOWER TERCENTENARY.

THREE hundred years ago the Pilgrim Fathers left Plymouth on their voyage for liberty and landed in New England. The efforts of the Pilgrims, at first in vain, to escape to Holland, their re-union and sufferings in that country, the departure from Delfthaven in July, 2620, the sailing from Southampton on August 5, 1620, of the two ships Maytower and Speedwell, and the subsequent dismissal from the enterprise of the latter ill-fated vessel, the final departure of the Mayflower from Plymouth on September 6, 1600, and the arrival two months later at New Plymouth, the subsequent terrible hardships of the Pilgrims, and the eventual triumphant events and achievements arising as direct results from the expedition, form a chain of events constituting one of the most moving episodes of religious history. Wide attention has been focussed upon these events during the past year by the cele-brations which have taken place in the United Kingdom, the United States and Holland.

A large number of commemorative functions was organised, and pageants, plays and proceswas organised, and pageants, pays and processions have been popular features in a number of towns where homage has been paid to the Filgrim Fathers. Churchmen, of course, have taken a prominent part in the celebrations, and in many churches during September the Filgrims'

struggles formed the subject matter of sermons.
Plymouth, as was to be expected, led the way in the celebrations, and many of our most dis guished men and women, as well as imperiant American and Dutch visitors, took part in the functions, which lasted throughout the second week in September. The Prime Minister, unable to be present through absence from the country, paid his tribute in a letter to the Secretary of the National Free Church Council, in which he said, "Many brave ships have set out from the shores on voyages whose fame will ever live. By no means the least of these was the historic voyage of the renowned Maylower. We have good reason to commemorate the labours and sacrifices of the gallant men and women who sailed on her three hundred years ago. Actuated by a high purpose, they faced the unknown with undaunted courage and cheerfulness, and with abundant and abiding faith. They achieved far-reaching results, which have exceeded all their hopes and expectations, anxious though they were of the greatness of their venture.

"We pay respectful and grateful tribute to their fidelity, to the principles of freedom and democracy, which were alike their inspiration and their guide, and to their lasting contribu-

tion to the cause of human progress.
"We also welcome these celebrations as an opportunity for fostering the good relations which happily exist between ourselves and the great American people, and for furthering and strengthening the bonds of union, amity and cooperation between the descendants and country-men of the Pilgrim Fathers in all parts of the world."

# MUNICIPAL HOSPITALS.

Proposals to empower county and county borough councils to supply and maintain hos-pitals, and to assist voluntary hospitals out of local rates were included in a Government Bill introduced in the latter part of zeco. Clause II. of the Ministry of Health (Miscellaneous Provisions) Bill, as introduced, provides that county and county borough councils shall have power-

- (a) To supply and maintain hospitals (including out-patient departments) for the treatment of illnesses and diseases generally, or for the treatment of any particular illness or disease, or any particular class of illnesses or diseases.
- (b) To contribute, on such terms and conditions as may be approved by the Minister of Health, to any voluntary hospitals or similar institutions within their area.
- (c) To undertake the maintenance of any poor law hospitals or infirmaries within their are
- (d) To establish and maintain, or to contribute towards the cost of, or otherwise aid in establishing or maintaining, an ambulance service for dealing with cases of accident or illness within their area

It is also provided that the councils of two or more countles may, with the consent of the Minister of Health and subject to such sandi-tions as he may prescribe, combine for the pur-pose of supplying and maintaining hespitals, to

be managed under a joint committee.

In several districts where institutional economication has been insufficient the establishment of municipal hospitals had been suggested and in Bradford official sanction has recently been

obtained for the conversion of a poor-law infirmary into a municipal hospital. Municipal ambulance services have already been establisted, notably in London, where the London denset council has erected and maintains stations with motor ambulances in various stations with motor ambulances in various station with motor ambulances in various station to the metropolis; and under the Public Hashis (London) Act of 1892 the metropolitan belough councils have power to provide hospitals according to the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of the council of tals and to contribute to hospitals serving that districts. At the time of going to press the Milt had not been read a second time, but it was anticipated that the provisions relating to hospitals would meet with opposition. The chief objections raised to the new proposals of the Gövernment ware that (1) in view of the heavy and increasing burden of the rates, no further spending powers should be bestowed on local authorities at present, and (2) the present difficulties of the hospitals in attracting voluntary contributions would be increased by reason of the possibility of their receiving contributions from local rates.

# PROFIT SHARING AND CO-PARTNERSHIP.

THE latest available figures compiled by the Intelligence and Statistics Department of the Ministry of Labour deal with 116 schemes in operation in the United Kingdom during 1919 A further number of schemes was in operation, but returns were not received by the Ministry from firms whose first bonus payment was not made until rose, and others whose schemes are of such a nature that the amount of bonus cannot be stated. During 1919, 42 schemes were started, this being the largest number started in any one year. The number started during the first six months of the past year, so far as had been ascertained at the 30th June, was 19 The following summaries give particulars of the szs schemes for which returns were received, arranged (a) according to trades and (b) according to the percentage of bonus to wages.

#### RAILWAY POLICY.

PROPOSALS for the future organisation of the railways in Great Britain have been outlined on behalf of the Government by the Minister of Transport. For England and Wales it is suggested that there shall be five main groups of lines with a subordinate group of the lines in the London district, whilst the whole of the Scottish railways shall be combined in a single group. It is proposed that the five main English groups shall be constituted roughly as follows :-

(1) Southern—combining the South Eastern and Chatham, the Brighton, and the South-Western.

(z) Western—the present Great Western system with the Weish lines

(3) North Western—combining the North-Western, the Midland and the Lanca-shire and Yorkshire, North Staffordshire and Furness.

(4) Eastern- combining the Great Northern. the Great Central and the Great Eastern.

(5) North Eastern—the present North Eastern system and the Hull and Barnsley. Each of the groups will be under a Board of

Management not exceeding as in number. The composition of these Boards is considered to be of the greatest importance, and the downment is of opinion that the present system should be superseded and that the officials and manual workers should have some voice in management. It is therefore proposed that the Board of Management should be composed of representatives (a) of the shareholders, who should form a majority on the Board, and of whom a proportion should hold large trading interests; and (b) of employees, of whom one-third might be leading administrative officials of the group, to be co-opted by the rest of the

or the group, to be co-opted by the rest of the Board, and two-thirds members selected from and by the workers on the railway.

It is not proposed to give to the companies any financial guarantee, but it is suggested that a fexible rates machinery shall be set up which will enable appropriate charges to be levied so that each group will be enabled to earn a net revenue substantially equivalent, on some prevenue substantially equivalent, on some prevenue substantially equivalent, on some prevenue substantially equivalent, on some prevenue substantially equivalent, on some prevenue has to be settled, to the combined set. var basis to be settled, to the combined net revenue of all the companies absorbed in the group. In the event of any surplus revenues accruing from economies, which may be effected, the Government is of opinion that these should

be apportioned between the companies and the Government on a basis to be settled later, the Government's share to be funded for development

purposes, to assist backward districts, to develop light railways, etc.

Further proposals include the setting up of permanent machinery to deal with questions. wages and working conditions, on the lines of the two Boards which have been established temperarily by agreement, viz., (2) the Central Wages Board, consisting of equal numbers of managers and men, with an appeal to (a) the National Wages Board, consisting of 4 managers, 4 men, and 4 users of the railway, with an impartial chairman Certain powers, it is thought, should be conferred upon the Government for the protection of the public, for the economical working of the railway systems and to safeguard national interests is proposed to exclude light railways from the grouping arrangements, and there is no intention of altering the status of the dock undertakings of the country, except to bring railway-owned docks under the same regulations as other docks in certain respects. The future of canals is to in certain respects. The future of canals is to be investigated by a Committee which has been set up under the chairmanship of Mr. Neville Chamberlain, M.P., and the Govern-ment will not formulate a policy until the Report of the Committee has been received.

#### RENT RESTRICTIONS.

THE Jucrease of Rent and Mortgage Interest Restrictions) Act, reso, was passed to consoliate and amend the enactments relating to herease of rent and rate of interest on mortgage if premises, and recovery of possession'in certain lases. The Act applies generally to houses and ousiness premises, or parts thereof, let separately, where either the "standard rent" or rateable value does not exceed—in the Metropditan Police District (including the City of Loadon) £zog, in Scotland £30, and elsewhere £21; and it continues in force until June 24, 2923 except as regards business premises, in which case the date is June 24, 1921. The increases of rent over the "standard" rent authorised by the Act are, in respect of houses, as follows .

(a) Where the landlord has, since August 4 rest, spent money on improvement or structural alteration, he may add to the annual rent a sum equal to 5 per cent. on any expenditure incurred up to July 20, 1920, and 8 per cent. on expenditure since that date. This expenditure does not cover money spent on repairs or

decorations.

(b) Any increase in rates payable by the landlord since the period which included August 2.

rena, may be passed on to the tenant.

(c) To meet the increased rate of mortgage interest, and to provide an increased return on capital invested, an increase of 1g per cent. of the "net rent" is permitted; but in the case of houses overed by previous Rent Acts g per cent. only may be added during the first year cent. thly may be added during the first year from the passing of the Act. These are houses where neither the standard rent nor rateable vaine exceed £70 in the Metropolitan Police District, die in Scotland, and £30 elsewhere. (d) To meet the increased dost of topairs, as per cent. of the net rent may be added where the handlord is responsible for all repairs; or a smaller proportion, which may be agreed or

settled by a County Court, where the landlord to responsible for part only of the repairs.

But on the expiration of three months after the date of any increase under (d) the tension may apply to a County Court for an order to suspend any increase under (c) and (d) on this ground that the house is not in all respectifieres only in the house is not in all respectifieres on the suspension of the suspension in a reasonable state of repair.

The "standard rent" is the rent on August a 1914; or, where a house was not let at that date; the rent at which it was last let before that date; or, in the case of a house first let after August 3. 1914, the rent at which it was first let. The "net rent" is the same as the standard fent except where the latter included rates : in these cases the net rent is the standard rent minus the rates.

It is important to note that no increase of rent is authorised except in respect of a period during which the landlord would be entitled to obtain possession, if it were not for the security of

tenure provisious of the Act.

New provisions with regard to the recovery of possession are included in the Act, notably die dealing with ex-Service men who were tenants, but a wide discretion is left to the Courts in al cases, and no order for possession need be made unless a Court considers it reasonable to do The existence of alternative accommodation need not be shown in certain cases, e.g., where a landlord gave up possession in consequence of his service in the forces during the War.

Business premises within the values given above are covered by the Act with modifications as to security of tenure provisions and a permitted increase in rent of 35 per cent. instead of 15 per cent. under (c) above, making a total

permitted increase of 60 per cent.

#### SILVER COINAGE.

THE great rise in the market price of silver has been responsible for the passing of an Act "to amend the Law in respect of the Standard Fineness of Silver Coins current in the United Kingdom and in the other parts of His Majesty's Dominious." The Act applies to any British possession where the Comage Act of 1870 is in force, but not to any self-governing Dominion unless and until the provisions of the Act are adopted as regards the Dominion by a proclamation of the Governor-General or Governor. new measure authorises a reduction of the fineness of silver in coins from gas fine to see fine that is to say, instead of being composed of a of fluessliver and in of alloy, our sliver coins minted in future will contain one half silver and the half alloy.

One troy pound of standard silver is used for country so shillings, a troy ounce therefore, or colling so sninings, a troy ounce inservore, on this basis, being equivalent to 65 phace, and one ounce of pure silver to 72 phace, and one ounce of pure silver to 72 phace. As for many years the market price of silver was much below these figures (e.g., for the soven years 1995-18, the average price per ounce in the London market was as \$4.), the Government gained by minting, and there was no inducement to melt silver coins, and no restor for the prophiliting the average of the first first coins at the first council for the property of silver coins at the first council for the property of silver coins at the first council for the property of silver coins at the first council for the property of silver coins at the first council for the property of silver coins at the first council for the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property o prohibiting the export of silver coins, etc. But with the rise in the market price of silver during the last three years the necessity for stringent regulations to deal with these matters was realised. A more important question involved by the greatly increased price was the loss occasioned by minting. For instance, if silver had been coined in the old proportions at anarket value prevailing at one time during the past year, the cost of the pure silver alone in as shillings would have been something like \$2 shillings. Under the new Act the troy ounce of silver, which will coin 5:3 shillings, will comprise half an ounce of fine silver, so that unless the market price reaches a figure very much higher than the highest point hitherto touched, the Government's margin of gain in minting will be preserved.

With regard to the calling in of the old, and the issue of new coins, the machinery of the

With regard to the calling in of the old, and the issue of new coins, the machinery of the banks will probably be utilised for these purposes, as has been done in the past, so that the change will be carried through without any inconvenience to the general public.

# TRADE UNION CONGRESS.

TEE sand Annual Trade Union Congress was held at Portsmouth, September 6-21, 1920, with Mr J.H. Thomas, Mr., in the chair. The delegates sumbeyed 949, from 195 trade unions having a membership of 6,494,707. The corresponding figures for the Congress held at Glasgow a year earlier were 850 delegates, 203 societies, 5,252,500 members. First Congress was held at Sheffeld in 2656 and was attended by 123 delegates from 94 societies and councils with membership of

Arising out of the Glasgow Congress a special T.U.C. was held at Central Hall, Westminster, on Dec. 9 and 10, 1919, when resolutions were passed against increase in cost of living and sundry matters after the Congress had decided to support the miners by means of a national propaganda for the nationalisation of the mines. A second Congress was held on Mar. zz, zeso, to consider the result of the propaganda, when it had to be admitted that the public was not yet convinced of the benefits of nationalisation. strike in support of nationalisation was ruled out as impossible by 3.870,000 votes to 5,050,000 and an alternative resolution in favour of "political action by means of intensive propaganda in preparation for a general election carried by 3,733,000 votes to 1,015,000. A third special Congress was held at Westminster on July 23 to consider the situation in Poland and Later on the Parliamentary Committee Ireland. of the T.U.C. assisted in the formation of the Council of Action.

At the Portamouth Annual Congress attention was paid to the formation of a General Staff for Labour. The stated intention was the establishment of a General Council ou behalf of Labour, and a resolution embodying the proposal to establish such was carried by 4.835,eee votes to 2,757,6ee. Stock socialist resolutions were carried; there was a remarkable attack on Mr. Appleton, the General Secretary of the English Trade Union Federation; full support was given to the miners, who were in negotiation with the Government for the sx. per shift wage increase; Mr. Smillle made an attack on the method of electing the Parliamentary Committee, stating that votes of the delegates were a matter of barter between individuals.

#### VICTORY BOND DRAWINGS.

FIRST annual drawings of the Victory Bonds were announced in a special supplement of the London Gasette of June 25, 1920, when the

numbers of bonds in the Bank of England issue to the extent of £2,725,000 and Post Office £75,900 were listed for payment at par on sept. 2 following. Two separate drawings are to be held yearly; i.e., one for the Bank of England issue, which will be completed at the Bank in the presence of the Governor, Permanent Secretary to the Treasury and the Comptroller of the National Debt, and the other for the Post Office issue at the P.O.S. B. in the presence of the same officials excepting that the Postmaster-General replaces the Governor of the Bank of England. The smaller bonds are to be drawn in groups, and, those of £1,000 and £5,000 also in separate groups. Drawn numbers are to be published not later than July 1 of every year for bond repayments two months later. The final drawing is to take place in 1976.

#### WAGES.

REMUNEIATION for services rendered has taken quite a different plane since page. A big percentage increase has been given to the skilled and unskilled mechanical workers, and to obtain such there has been almost continuous negotiation between trade unions and employers with the Ministry of Labour intervening. And in a large number of cases there has been a strike before the increase has been obtained. In the year sprf. 5,965,000 workpeople were reported to have had their wages increased by a total of £a,985,000 weekly, or almost zee each on the average. During 1978, 5,647,000 workpeoply received wages increases totalling £a,767,000 workpeople with a weekly increase of £a,687,600 From Jan., 1918, to Sept., 1920, the average miner's weekly increase was £3, engineer's weekly. Generally, the increase has been to meet the additional cost of living, but there is a tendency to increase the standard of living aso. Hours of labour are gradually being reduced from 48 hours to 44 and 47 weekly.

### EMPLOYMENT FOR WOMEN.

# ESTATE AGENTS AND AUCTIONEERS.

THE Auctioneers and Estate Agents' Institute have recently opened their door to women, and they are admitted under the same conditions as men. The fact that the University of London now grant a Bachelor of Science (Estate Management) Degree has raised the status of the profession very much, and women who enter it will be wise if they aim at the higher and obtain the degree.

The degree is an external one, and can be worked up for while studying for the examinations of the Institute.

There is plenty of scope for women in this new profession, both for those with capital, who can eventually start an office of their own, and for those who only wish for appointments.

for those who only wish for appointments. The first step in entering the profession is to pass the preliminary examination of the Institute or to obtain exemption from it, which is possible for those who have passed one of the recognised examinations, such as the matriculation examination of any university of the United Kingdom. It is then necessary to become a student, or an articled elect to an assistance extate agent, or values. The earliest age to start

as either is sixteen, and the intermediate examination of the Institute cannot be taken under nineteen, but none under twenty-one may be elected as Associates of the Institute, and it is when the woman is an Associate that she is qualified to take an appointment. There is an examination qualitying for the grade of Fellow, but none may be elected as Fellows under twenty-five years of age. The dis-tinguishing letters to be used by those in the profession are F.A.I. and A.A.I., according to whether they are Fellows or Associates. The examinations are held once a year in Loudon.

The subjects required for the preliminary examination are practically the three R.s. For the intermediate most of the subjects are technical, such as law of laudlord and tenant, land surveying, estate accounts, the valuation of dilapidations, and so forth. For the Fellowship very similar subjects are studied as for the very similar sudjects are studied as not intermediate, only more advanced, including "Practical work preliminary to Sale by Auction" Report Writing." "Agricultural Customs," "Sanitation," and several others.
There are so many sides to an auctioneer's and estate agent's work that those women who

study and become proficient will have plenty of choice. Doubtless some branches will be found more suitable to women than others, while much will depend on the woman herself. is a profession that affords opportunity for a country as well as a town career, unlike many which necessitate living in Loudon or's arge town. Women have not had to fight their vay into the estate agents' and auctioneers' world is in some others. But they have been invited to enter and consequently are assured of a welcome, and there is every prospect of it becoming a most lagrative profession for the right class of women. The Institute have prizes that they offer in connexion with the different examinations.

### WOMEN DISPENSERS.

Quite a number of women have entered the dispensing world during recent years. Some have passed the Pharmacoutical Society's Examination and become qualified Chemists and Druggists, while others have contented them-selves with the Assistants' Examination of the Society of Apothecaries. Women who aspire to having a chemist's shop of their own, or to obtaining one of the big appointments open to dispensers, or taking a managership, must pass the Pharmaceutical Examination, but those who only wish to dispense and are not aiming at the highest, need only outer for the "Assistants examination.

It is necessary to have three years' preparation for the former, one of which must be spent in a Pharmaceutical College and to do at least 6 months' practical dispensing for the latter.
Women dispensers are to be found in every

branch of the dispensing world - hospitals, infirmaries, in the wholesale as well as the setail druggist's, and during the War they were to be found on foreign service, as well as in Military and Red Cross hospitals at home. There was naturally a large increase in the number who entered for the "Assistants" examination who entered for the "Assistants" examination during war time, as the certificate could be so quickly gained, and the result is that the special side of the profession is rather overcrowded, but will some right itself. There is still plenty of samps for the fully qualified woman, and those who have started a chemist and druggist shop

have been most successful. The public have become quite used to the fact of women dis-pensers at chemists, so that projudice has been broken down. In their examinations women have won distinction, and in their

women have won distinction, and in them practical work proved themselves capable workers—methodical, neat and accurate. Several women have passed the "Major Examination" of the Pharmaceutical Society, which is very advanced, and is only taken by a comparatively few altogether, as the "Minor Examination" is the qualifying one.

The women dispensers have their own special

societies.

The women who have the highest qualification should by right receive the highest pay, but with women dispensers it is not always the case, and this fact has, in several instances, prevented them from aspiring to the chief examination, knowing that it does not always mean real gain financially.

The cost of training for either examination varies very much, according to the college. For either it is very moderate. A course at a Phar-maceutical College for the "Minor" may be only about £xs, or it may be as much as £6s. For the "Assistants" Examination (or the "Hall," as it is commonly spoken of from the Apothecaries Hall), the fee is as low as £7, and as high as £60. There are few professious that " Hall," can be entered at so small a cost as that of the Chemists and Druggists and the Dispensers; but for the former there is usually a premium to pay to the chemist and druggist to whom the pupil is apprenticed, and under whom he or she does a large share of the three years' dispensing necessary to fulfil the Pharmaceutical Society's qualifications.

# WOMEN POLICE.

The Women's Division of the Metropolitan Police has proved a great success. When it was first started at the end of 1918, it was an experiment and its future depended on the satisfaction it gave during the experimental period that has recently come to an end. The division has been see strong, but its numbers will now be increased, and women police will become a much more familiar figure to the London public.

The work of the division is chiefly connected with women and girls, and it is anticipated that as the numbers increase they will enter many more spheres of work than they have been able to when they were so small a body. Their usefulness in "open spaces" and the streets has been proved many times, their patrol work in cafes, and all they have done towards uplifting the moral tone of where they work has been most beneficial to those they are meant to help. There is a great demand for their services, and doubtless before long all cases connected with women and girls will, as far as the police force is concerned, come under their care.

Already there is a long list of names of women auxious to join the division; only those who are thoroughly suitable have their names put down. None are accepted under twenty-five years of age or over thirty-eight, they must be medically fit and have received a good general education. Recruits undergo three months' training, during which time they are paid.

The officers will always be promoted from the ranks, so that although a higher standard of education will be demanded (university standard

if possible) from them, all must start at the

boftom and work their way up.

The Superintendent (Afra. Stanley) was formerly Superintendent of the "National Union of Women Workers" Patrols" started in one by this body in war time that the Metro-politan Police derided to have a Women's Division especially to protect women and girls from the dangers of the streets and parks. The Superintendent has done much towards faising the present division to its high standard of efficiency; none but the best are accepted as recruits, and the work expected from each woman is of a high standard.

The normal hours on duty are seven, and this includes one hour for rest and refreshment. One day's leave in seven is granted and an annual leave. The time varies according to the rank. The rate of pay is very good, and as promotion is gained it increases in proportion.

Altogether the future of the Division is very hopeful, and judging by the last two years when their activities have been so limited, great things may be looked for from them when the see chlarge into a division of an imposing number.

### HEALTH VISITORS AND INFANT WELFARE WORKERS.

There is a great deal of work to be done among young children by the welfare worker; while that of health visitor is of a more general character. For either employment a special course of training is necessary. For welfare work it is best to start quite young—on leaving school-as then the time can be spared to go right through each branch. The first thing to do is to work at a cieche, where valuable experience is to be gained; while there a salary will he paid to the learner. A course of classes on domestic science and hygiene are very necessary, and also on maternity and child care, so that theory as well as the practical work may be learnt.

At the various polytechnics very useful classes are held, and the more of such subjects a girl is wall informed in the better worker will she be, and the more capable later on of holding a responsible post. The most important part of the training is the time spent at a hospital. The most suitable is a children's hospital. If she goes to a general hospital she will not be able to work in a children's ward only, but will be moved from ward to ward, consequently learning a great deal that is not necessary for her future work. In addition, probationers are admitted at a children's hospital at a much earlier age than at a general hospital.

It is essential for the infant welfare worker to have training in midwifery. When this has been obtained she must enter for the examination of the Central Midwives Board. As none may ait for this under twenty-four years of age, it is a long way off from the young girl fresh from school. All the same she must bear in mind that directly she is old enough she must

gain it.
The training necessary takes six months.
Those outside the infant welfare world may wonder at so much training being required, but it is only those girls who are fully qualified who have the slightest chance of gaining a good appointment. If a girl does not feel disposed to

train very thoroughly it is better not to go in for the work

The appointments are of different kinds. the various infant welfare centres posts are held of superintendents and assistant superintendents. At the hostels for mothers and infants, and at creches, matrons and assistant matrons are appointed. The worker who is not thoroughly well-trained can never hope to rise above being an "assistant."

The health visitor requires a training rather similar to that of the infant welfare worker.

While the health visitor may obtain an appointment in town or country, the infant welfare worker's life will be spent in citles or large towns. The more crowded the neighbourhood, the more probability is there of a crecke or hostel being opened, or an infant welfare centre being started.

#### MASSAGE.

Massage is now a recognised profession. Only a masseuse who has passed the examination of the Incorporated Society of Trained Masseuses has any standing; the qualified masseuse only attends cases under a doctor.

The training undergone has to be of the special nature required by the society, otherwise a candidate is not allowed to enter for the examination, and the school must be "recognised."

It is important for a girl who is thinking of learning massage to realise these important points before starting on her course of training otherwise time and money may be lost.

Twenty-one years of age is the youngest as which a girl can enter for the examination. shortest possible time required to train is sit months. The practical work is done at a hospital and the theory at the school, but the pupils enter at the school only as they work in conjunction with certain hospitals, and the week's work for each pupil is planned out so that they get not less than four hours' practical work on hospital patients per week for three months. The pupils learn a good deal of anatomy and physiology

At the end of their training the examination is in two parts. One is practical (massage), and the other is theoretical, and consists of an oral and written test in all they have learnt at the school, which includes the theory of massage. The examination is held twice a year.

Once a girl has passed her examination, she is able to take a post at a hospital or other insti-tution, or to start a practice of her own, but not to run a school. There is another examination—it is on "Swedish Remedial Exercises"—and those girls who wish to be thoroughly proficient always enter for it. There is yet another, for teachers. To study for the former means six months longer at school, making twelve months altogether. This examination is only held once a year. It is necessary to have passed the first and second examinations and to have taught for more than eight months in a "recognised" school before going in for the teacher's examination.

The appointments open to a trained massense are resident and non-resident, but the most lucrative branch of work is a private practice. A massense who has interest among medical men and starts to work in a fashionable neighbourhood can make a very good income, far in excess of any salary that can be obtained by taking an appointment. Teaching is, again, another branch of the profession that man be made very profitable. It must be very well managed, for the Incorporated Society of Trained Management prioritistly impacts all the achools recognised by them to see that they are up to the becoment standard. Capital is required to start a school.

During the period a girl is training, she will be able to judge to a large extent as to what branch of the profession interests her the most, and certainly when first qualified, if she takes an appointment, the experience gained will be very valuable should she later on set up in practice.

#### WOMEN DOCTORS.

The number of women entering the medical profession the last few years has been very much larger than ever before. The opportunities open to them once they are qualified are so much more numerous than they were even a few years ago. Hospitals that never before the War had women on their staff now appoint them (proving such appointments were not for the period of the War only). In many branches of the profession women are to be found, and in the near future it is anticipated there will be various new appointments to be filled that will be especially suitable for medical women, e.g., in connexion with work among children. The education of the medical student has changed very largely. In London many of the greneral hospitals now admit them to the medical schools, so that those who prefer coeducation need not enter the School of Medicine for Women, but can become students elsewhere. While many have taken advantage of this fact, the School of Medicine for Women continues to he filled with students to its uttermost limit.

The women students show their ability for their work by their successes in their examinations. Whatever medical school a woman enters, her work and her examinations will be the same-to fit her to be admitted to the Medical Register. Five years must be spent at a recognised medical school: she must go through the necessary course of work, and either take a medical degree or pass the "Conjoint Board" (e.g., The Royal College of Physicians, London, and the Royal College of Surgeons, England), or the examinations of the Society of Apothecaries.

The length of time necessary at a medical school is five years (for the degree a little longer). The fees vary according to the medical schools, and there are examination fees to be paid books, and other expenses, making a total cost of from £175 to £33. It is not every student who passes his or her examinations in five years. It longer time is required the expense is increased. Women can obtain medical degrees at not only the University of London, but in Scotland, Ireland, Birmingham, Bristol, Leeds, Liverpool, Manchester, Sheffield.

There are a large number of scholarships and There are a large number of scholarships and prizes at the various medical schools. The School of Medicine for Women, London, is especially rich in them. Sixteen years of age is the earliest at which a girl can enter as a student at any medical school. The first two to two and a half years are spent hi work in chase rooms and haboratories, so that a student is at least between its and up before the actually enters the hospital itself. This fact overcomes many of the objections against starting their career while so wome. young.

There is undoubtedly a good prospect for the medical woman of the future, but one thing is essential, and it is that those who study for the profession become as highly qualified as possible.

#### WOMEN VOTERS.

A GREAT increase in the number of women voters was proposed by the Representation of the People Bill, presented to Parliament during the past year. The objects of the Rill, as stated in the memorandum thereto, were to confer the franchise on women at the age of mx; to assimilate the parliamentary and local government franchises by abolishing the occupational qualification, and the qualification of women as the wives of local government electors; and to place the whole franchise for both sexes (other than university electors) on a similar hasts of residence. Other amendments of the Representation of the People Act, 1918, were provided for. The main principle of the Bill was contained for. The main principle of the Bill was contained in Clause z -"A person, whether male or female, shall be entitled to be registered as a parliamentary or local government elector for a constituency (other than a university constituency) or local government electoral constituency or local government electoria area respectively, if such person has attained the age of az years, and is not subject to any legal incapacity, and has the requisite residence qualification." The Bill proposed to sbolish (except in the case of a university constituency) the alternative or business premises qualification for the parliamentary franchise, provided for by the Representation of the People Act, zers, and also the right given in certain circumstances to vote in two constituencies at a general parliamentary election.

The effect of lowering the age for women voters as proposed would be to increase by about 5,000,000 the number of women entitled to vote at parliamentary elections, making the total number qualified over 13,000,000, whilst the total number of men voters would be somewhat less than 13,000,000, women yoters exceeding men voters by about half a million.

On the second reading of the Bill, the Minister of Health stated that the Government proposed to leave the Bill to the free determination of the House, reserving to themselves the right to bring forward amendments in Committee. Personally he was entirely in favour of the Bill. With regard to the work of preparing the register, Dr. Addison stated that the additional cost due to the increased electorate was estimated at between £300,000 and £400,000 per annum. The Bill passed the second reading without a division and was referred to Standing Committee D of the House of Commons, but owing to a considerable amount of opposition made little progress. A special report presented to the House by the Committee stated that they could not with advantage proceed further with the Bill.

#### WORKMEN'S COMPRESATION.

Far-REACHING recommendations are contained in the Report of the Committee appointed by the Home Secretary to enquire into the present system of compensation for injuries to working, (Information as to the schemes in force in countries which have passed Workmen's Compensation laws was given in last year's issue of WHITAKER'S ALMANACK, pp. 947-2.) One of the most important questions considered by the Committee was the desirability of establishing a State system of accident insurance in the United Kingdom. State systems have been in operation for some years in many countries, but the Committee were of opinion that the defects in our present system could be largely remedied by the adoption of the following modifications without resort to a State system :-

(s) State supervision of rates of premium of insurance companies with a view to the restriction of their expenses and profits in workmen's compensation business; not more than 30 per cent. of the premium income to be expended in profits, management expenses, and payments for sperious insusgented expenses, and payments to exceed a per cent, of the premium income in any case; the maximum rates to be approved or fixed by a

(a) Mutual associations to be placed under the same obligations as insurance companies as to setting aside funds to meet outstanding liabili-

ties and as to returns, &c.

Government official.

(2) Every employer-other than the ('rown, a local or other public authority, a statutory company, or a householder in respect of servants not employed by him for the purpose of his trade or business, and, under certain circumstances, firms whose payroll for three years averages over £80,000 and who are "self-insurers"—to be required to insure against workmen's compensation risks.

It is proposed that several new classes of workers should be brought within the scope of the scheme in addition to the 15,000,000 workers already covered, among these being persons tion at the time of his accident.

employed otherwise than by way of manual labour whose rate of remuneration does not exceed £350 per annum, instead of £350 under the existing law.

With regard to benefits, instead of the present basis of earnings in cases of payments to depen-dents and compensation during incapacity, the Committee make the following recommends.

In fatal cases—for total dependents—

(a) Where a widow is left, £250.

(b) Where children under 15 are left, a weekly allowance of 108 for the first, 78. 6d. for the second, and 6s for every other child; these allowances to be provided out of a Central Fund to which the employer will pay £500 in every case of a workman dying and leaving any children under 15.
(c) Where other total dependents are left in

addition to the above, a further sum not

exceeding £50

(d) Where total dependents are left, not included a widow or children under 15, the sum of £250.

Burial and medical expenses to be increased

to £x5.

In cases of total ineapacity, two-thirds of the average weekly earnings, with a maximum of

L3.
In cases of partial magnesity, two-thirds of the difference between the average weekly earnings before and after the accident; in the latter cases provision to be made for increased payments if wages are increased by upwards of so per cent. in the workman's particular occupa-

#### THE UNION JACK CLUB, Waterloo Road, S.E. z. Tel.: 2522 Hop

Patron in Chief: His Majesty the King.

Patroness-in-Chief: Her Majesty the Oneen.

#### Patrons:

H R H. The Prince of Wales, K G., etc.; H.R.H The Duke of Connaught, K.G., etc.

President: Colonel Sir Edward W. D. Ward, Bt , G.B.R., K.C.R., K.C.V.O.

Vice-President: Colonel Sir Walter R. Lawrence,

Bt., G.C.I E., C.B. Hon. Treasurer: Sir G. J. Marjoribanks, K.C.V.o. Comptroller of Club: Brig General E. F. O.

Gascoigne, C.M.G., D.S.O. Secretary: J. R. Hayward, Resident Supt.: F. Seymour.

This is one of our great National Institutions, where Sailors, Soldiers and Airmen can go when on leave or passing through London; a place where they may deposit their kit and valuables, where they may obtain at moderate charges a cood meal and a comfortable bedroom, where their every need is studied, and where they are under their own roof and feel really at home.

The Union Jack Club was erected by public subscription as a National Memorial to those who had faller in the South African War, opened on July 1st, 1997, by His late Majesty King Rdward VII. and handed over to the Regular Services. Membership is limited to Petty Officers, Non-Commissioned Officers and men on

the Active List of the Regular Forces, but during the War all mobilised men, including those from the Overseas Dominions and Allied Countries, were made Honorary Members. The Club is self-supporting and managed by a Committee, which includes representative members elected by the men themselves Already firmly established before rors, the Union Jack Club was an inestimable boon to Service men in the Great War, during which period alone sleeping accommodation was provided for no fewer than 1,121,328 men and 3,044,800 meals were served, whilst many millions of whom no record was kept passed through its doors for rest and refreshment, many of them straight from the trenches in France. Open day and night, the capacity of the Club was taxed to the uttermost.

Work has been commenced on a considerable extension of the Club with funds raised in all parts of the Empire to commemorate the recent inspiring services of our gallant fighting forces and to provide the increased accommodation which is so much needed.

### A Kailway Tunnel between Great Britain and Freland.

AMONG the ambitious projects with which engineers of imagination are wont to solace their leisure moments is that of a tunnel connecting England and Ireland, or Sottland and Ireland, or both. The near prospect of the Channel Tunnel has set them thinking, and as they have not to concern themselves, like the promoters of the Channel scheme, with questions of national defence, or possible invasion from the Continent, they are free to devote themselves entirely to engineering considerations.

More than a generation ago the question of an Irish tunnel was taken up by engineering and commercial men on both sides of St. George's (hannel, and it may be convenient to mention here that it was included in the terms of reference of the Select Committee appointed to deal with the problem of Inland Transport. Hitherto the attention of these pioneers has been given to the possibility of horing a tunnel between lister and the south-west corner of Scotland, where, it may be seen from the study of the map, Great Britain and Ireland are closer together than at any other point. Four or five schemes have been prepared for a tunnel under the sea somewhere near this point, where the average depth on the North Channel is about The shortest of all these pro-So fathoms. jected routes is from the southernmost point of the Mull of Kintyre to a point on the rish coast a little to the south-east of Fair Head. distance by sea between these two points is about rg miles, and the sea-bed is one of uniform level. But, as often happens in the affairs of life, the shortest cut is the longest way round. Given the tunnel between the Mull of Kintyre and Fair Head, and more than 100 miles of new railway would still be required to join up the Scottish end with the existing railway system in Scotland and a shorter line to link up the Irish end with the Irish railways. The journey end with the Irish railways. The journey involved would demand of the traveller from London as much time as is required by any of the existing routes. Unless, therefore, the Irish tunnel is to be constructed solely for the use of Scotsmen and Irishmen the route here described must be ruled out of consideration.

Most of the promoters of the scheme fix on Belfast as the ultimate goal to be simed at, and a good deal is to be said for this point of view. The second shortest route is from Portpatrick in Wigtownshire to Donaghades, a distance of as miles. The sea-hed rests upon the Silurian system of rocks, but the unfortunate point about it is that about 7 miles from the Scottish coast there is a sudden drop from Sc to 150 fathoms, which runs for a distance of nearly a miles. Engineers have considered two possibilities in this connexion. They may tunnel at a greater depth so as to get completely under the dip, but this would involve steeper gradients and longer approach lines at each end. They could also swing about the line of the tunnel so as to avoid the great hollow, but this would mean extending the length of the tunnel from as to 40 miles, and an under-water railway lourney of at least an hour.

as to 40 miles, and an under-water railway journey of at least an hour.

A slightly better route is that from Portpatrick to Whitehead. The distance is 23% miles, or 27 miles allowing for the land approach; the greatest depth involved is 120 fathoms, and

the gradient x in gs. A fourth route, and one which has found the largest number of supporters, is that between Wierston Hill and Magee Island. The length would be sy miles of actual tunnel, increased to 30 miles if a dip hit the bottom of the sea, known as Beaufort Dyke, is to be avoided. The land approach would probably mean another 7 miles added to the distance, but against this disadvantage must be set the advantage of a lesser gradient - z in 75 in fact.

More amhitious schemes have at one time or another been projected for connecting Holyhead and Publin by tunnel, a distance of 60 miles; and Fishguard to Rosslare, a distance of 62 miles, for the moment these plans are likely to be left out of account, and attention concentrated on the more northerly tunnels. Many years ago Sir Robert Giffen, of the Board of Trade, who gave evidence before the Financial Relations Committee, said: — "I think the tunnel from Scotland to Ireland should be taken up by the State irrespective of any estimate of profit or loss on the undertaking. . . Looking at the immense trade between the two countries, and the possibilities of developing the tourist traffic and extending the residence in Ireland of people at present living in Great Britain, I think that the effect of making a tunnel would result in enormous commercial advantages, apart from the political advantages that might follow."

This was said before the War, and in any scheme of tunnel building the altered political aspect of the question, and, above all, the enormous rise in the cost of every kind of engineering work since hostilities ceased would engineering work since nostinities ceased would have to be seriously considered. The fro,coo,eac which so years ago was considered to be sufficient for the Wierston Hill-Magee Island tunnel must now be multiplied by x, and will then probably be found to be insufficient. Apart from politics and cost, however, it is clear that the more the two countries can be drawn together the better it will be for both. The mail and passenger services between England and Ireland and Scotland and Ireland would be accelerated and vastly improved. In pre-War days the journey between London and Belfast was 32 to 33% hours. According to calculations made when the under-water way between Scotland and Ireland was most talked about, the tunnel would reduce the journey to abolt, the themse would reduce the journey to rol/2 hours. Glasgow, it was said, could be reached from Belfast in 4 hours, Edinburgh in 5. York in 7, in fact all the important cities and towns in Great Britain would be brought nearer to Belfast by 2 or 3 hours. What this journey by through carriage would mean to thousands of passengers passing between the two countries: passengers passing between the two countries, what it would mean to send goods between the two countries without breaking bulk in the journey, must be apparent to all who consider the scheme without prejudice. We live in the days of marvels, even Irish marvels, and the day may not be far distant when the "horrors of the middle passage are abolished, and passengers can take their seats at Eustou and St. Panoras in the knowledge that they need not leave the comfort of the railway carriage until they can set foot on Irish soil.

British Association for the Advancement of Science.—The eighty-eighth annual meeting of the British Association for the Advancement of Science was held at Cardiff from Tuesday, Aug. as till Saturday, Aug. as. Professor W. A. Rerdman, who succeeded the Hon. Sir Charles Parsons as President, gave an address on "Oceanography and the Sea Fisheries." He contended that the fisherman must become the settled farmer of the sea if his harvest was to be less precarious. It was important to determine the number of fish in our waters, and what was the food value of each of them. Furthermore, we needed to know their habits and movements, and the nature of the elementary organisms on which they fed. As an instance of our ignorance in this respect, he mentioned the incomplete life-history of the eel. No spawning eel had ever been seen, he said. From all the fresh waters eels migrated in the autumn to the coast, and thence to the mid-Atlantic, and we know not how much farther, for the exact locality and manner of spawning has still to be discovered. Professor Herdman suggested that the abundant food supplies which lie at our door should be used to the fullest advantage, and that Cardiff, as a great scaport, might do some-thing for fishery research. The following were the Presidents of the various sections:—A, Mathematical and Physical Science, Ptof. A. S. Eddington; B. Chemistry, Mr. C. T. Hey cock; C. Geology, Dr. F. A. Bather; D. Zoology, Prof. Stanley Gardiner; E. Geography, Mr. J. McFarlane; F. Economic Science and Statistics, Dr. J. H. Chapham; G. Engineering, Prof. C. F. Jenkin; H. Anthropology, Prof. Karl Pearson; I. Physiology, Mr. Joseph Barcroft; K. Betany, Miss E. R. Saunders; L. Educational Science, Sir Robert Blair; M. Agriculture, Prof. F. W. Kgeble. Three citizens' lectures were delivered, Prof. A. W. Kirkaldy on "Present Industrial Conditions"; and Dr. Vaughan Cornish on "The Geographical Position of the Bitush Empire" the Presidents of the various sections :- A, In rost the Association will meet at Edinburgh, under the presidency of Sir Edward Thorpe, and

in the following year at Hull
Author as a Korm of Wealth.—Mr W. J. Peiry
discusses in the Journal of the Manchester
Koypetan and Orientel Society the problem of amber and its association with the megalithic problem. The amber used for decorative purposes in the Mycenean age was, he suggests, found in the Adriatic. In explanation of its value, of its adoption as a form of wealth, he supposes that amber, a solidified resin, may have been associated with the productions of certain trees venerated in Egypt as the source of reginous substances used in munimification and

other death-rites. Anglo-Swedish Ferry Service. - The proposal to establish a regular daily ferry service between Great Britain and Sweden has again been revived. The scheme was originally broached in March, appy, by the Swedish consul for Hull and Immingham, and contemplates a direct train-ferry mmgnam, and concemplates a unert frainterry service between immingham and dothenburg, where suitable harbours for the ferry boats would be built. The uniformity of railway gauge between the two countries is urged in favour at the proposal. The Swedish Government, while appearance of the proposal of the subsequent of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of the proposal of while approving the scheme, are not prepared to finance it.

Australia and its Population.-In the Geographical Review Mr. Griffith Taylor, discussing

the possible settlement of Australia, says that he sees little hope of the tropical part of the continent becoming prosperous and productive if the policy of White Australia is maintained. The hot, dry climate of the greater part of tropical Australia is best suited to the natives of India. Even if white settlement proved to be resulted by a low process of collectivities. possible by a slow process of acclimatisation, it would only be at the cost of many lives, and at best would take a very long time. Assuming that political difficulties will eventually be overcome, Mr. Taylor estimates that one district in the interior of Western Australia and the Northern Territory, with an area of about 25,000 square miles, is suited for any population The remainder of the area under consideration rice tenantical of the sea under consideration of about 1,400,000 with a density varying from 8 per square mile in the east of Queensland to x per square mile or less in the more arid parts of Western Australia and the inland regions of

the Northern Territory.

Bride's Stone in the Sudan.—Mr. H. A.
MacMichael, in Sudan Notes and Records, describes a curious example of a fertility charm, associated with stone worship, among the Tungur Fur tribe. The stone is known as the "oustom stone," or the "bride's stone," and is brought into use at a birth, a marriage, or the visit of a high official. After the marriage ceremony the bride and bridegroom are made to rub the blood of a sacrificed animal on the stane in the form of a cross If they are too poor to pay for an animal to be sacrificed they offer a pleas of cow-dung. They are then taken to a well, where the celebrant, taking a handful of mud from the pool, daubs it on their foreheads, shoulders, waists, knees, and loins, and bind their necks, wrists, and ankles with green grass.

Cattle Colour and Markings .- Miss F. Pitt, in the Journal of Genetics, discusses the colour and markings of pedigree Hereford cattle. She finds that the breed arose by selection from that that one offeet gross by section from the nondescript cattle of the county in the 19th and early 18th centuries. All colours and markings prevailed, but among them the red with white face, which is still characteristic of the breed, was most common. This pattern probably originated through a mutation which appeared in a dark herd in 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th and 19th 1750, and was kept and bred from as a curiosity. The white face is a dominant condition, while excessive white in modern Herefords is found to be recessive to the typical pigmentation. Modern variations from type are due to the outcrop of recessive characters inherited from the time before pattern selection was practised. Cliff-Dwellers in Colorado —Mr. J. W. Fewkes

has written for the Bureau of American Ethno-logy a monograph on the pre-historic villages, castles and homes of south-western Colorado, having special reference to the Pueblo state of culture in that domain of cliff-dwellers. He says that the buildings indicate communal thought, as they were constructed by groups rather than individuals. He finds no support among archiindividuals. He finds no support among archi-tectural data for the view that the Pueblo people were derived from Mexican tribes, or that their descendants travelled south and developed into the Asteen. The huldings ante-date the coming of the white man. Colliery Warnings.—The author of the anony-mons "Colliery Warnings," telling miners of the existence of atmospheric conditions favourable

to dangerous, situations, has been revealed as Mr. Henry Harriss, late of the Meteorological (Mice. In an article in the Morning Post Mr. Harries stated that he had carried on the work for 3 years, in the face of great hostile criti-cisms. His investigations led him to discover that nearly all the surious colliery explosions had occurred within areas of high barometric readings or anti-cyclones. The Abercame readings or anti-cyclones. The Abercarne disaster of 1876, with a58 deaths, had been preceded by a vast anti-cyclone which had drifted to and fro over Glamorganshire for ten days, during which the enormous weight of the superincumbent atmosphere had caused the roof of the mine to creep and return and great out-breaks of gas to occur. Mr. Harries states that in the years 1851 to 1880, when no colliery warnings were given, explosions caused a total of 7,354 deaths; for the next 38 years, with the warnings in circulation, the total was only 4,799, notwithstanding that the number of men employed below ground had more than doubled 8111CO x580.

Concrete Arch of 400 ft. Span.—The Franklin Avenue Bridge over the Mississippi at Minneapolis is to contain an arch of reinforced concrete of 400 ft. span, which is considered to be the largest in the world. It will consist of two arch ribs, with a rise of 88 ft. The arch will be flanked at each end by an arch of 199 ft. clear span and another of 55 ft. 6 in. span, the total length of the bridge being 1,08s ft. over the abutments. Hitherto the longest reinforced concrete arch completed has been that of 330 ft. span, in the Reorgimento Bridge across the Theer.

Rectricity and Seeds. - Mesars Sutton and Sons, of Reading, have published the results of a number of electrical germination and fieldtests carried out in 1919 with seeds of carrot, swede, cabbage and mangold. The best known process of seed germination, nz, the Wolfryn process, consists in immersing the seeds in a solution of salt and water or of calcium chloride. and water, through which an electric current is then passed. After the seeds have been dried at a temperature of roo' F. they are then ready for sowing. The Reading experiments were designed to test the value of the Wolfryn proccss, and to decide whether the advantages are due to the immersion, to the electrification, or to the two combined. Tests were made with untreated seeds, with seeds electrified by the Wolfryn process, with seeds soaked in a solution of sulphate of ammonia, and with seeds soaked in a solution of sait and water. After immersion the seeds were dried at 100° F. and then sown. The tests do not reveal any advantage from seed electrification, the only exception occurring in mangolds, where the germination of the electrified seed was 94 per cent., compared with 82 per cent. for the untreated seed and 86 per cent. of the seed soaked in the salt solution. In the field tests the electrified mangold seeds yielded

held tests the electrified mangold seeds yielded fas lb per pole more than the untrested seed. Electricity from Natural Steam.—Italy is not a coal-producing country, but it has other sources of natural power, one of which is to be found in the natural steam at Lardorello in Tuscany. The natural steam was first used for pollar heating, and, subsequently, was juried lifts a piston engine, which gave satisfactory figures. Still later a turbo-generator was instabled. Devalopments then took the form of tagthings of a special type. Each of the turbings requires about 77,000lb. of steam per hour, and

this steam is raised in tubular boilers containing aluminium tubes in a sheet-iron shell, the natura steam having a pressure of about one atmosphere, and that produced in the boller of half an atmosphere Each buller produces 13, soolb, et pure steam for hour.

Electric Locomotives in Coal Mines.—Small

electric locomotives for use in coal mines have been sanctioned by the Home Secretary. They are built to haul a load of is to 15 tous on the level, or of 3 tous up a gradient of 1 in 35, and the wheel gauge is so arranged that they will take any track from 15 ins. upwards. The battery-cells by which they are actuated are harved from a not or that up in the upin 5 and 5 charged from a power-station in the mine, and a normal charge is equivalent to a run of as to as nilles. The locunotive has a speed of g miles per hour with a load. It is expected that with the extension of this engine the pit pony will

be largely displaced.

Electrofied Cables for Ships .- The Admiralty are interested in bringing into more extensive use an ingenious device, consisting of electrified cables laid in the approaches to the principal ports, such as Liverpool, for the guidance of ships. Captains of vessels, by the new method, are able to follow the cable at any speed as easily as a street car follows the rails. From the homest the ship "tacks up" the outer and of the guiding cables, the man at the wheel need no longer be troubled by rocks, shallows and currents, or evoh by for. The principle of the invention is that of the electrified cable in use in ovean telegraphy. Electric circulating cables, carefully protected by metal coverings against fraying at the bottom, are fastened to the ground at one end near a station possessing powerful alternators for sending alternating currents.

Eyes Grow Kerner in the Dark.—Mr. Selig Hecht, of Creighton University, Omaha, has conducted a series of researches into the sensitiveness of the eye in the dark. He has pointed out that when a person enters a dark room after a stay in the outside daylight the eye at once increases in sensitivity. At first eye at once increases in sensitivity. At first this increase appears to be slow, but after five minutes it is quite rapid, the eye acquiring a sensitivity several hundred times its initial value. After thirty minutes' solourn in the dark the sensitivity still increases, but inbro slowly than before, and after forty-five minutes or an hour the maximum sensitivity is reached. The final scusitivity varies slightly with different people, but in fully adapted condition the eye is early 5,000 or 10,000 times more sensitive than it was at the beginning

Fish Rings and their Meaning.—Miss Rosa M. Lee, Naturalist Inspector to the Ministry of Agriculture and Fisheries, has written a report on the methods by which growth and age in on the methods by the main theory is that each of the rings seen on the scales of many dance is formed in the course of a year, and that danes is formed in the course of a year, and that their number gives the number of years the dan has lived. Other theories ascribe the rings to the influence of temperature, the amount of food, or some other physiological factor. Some Korwegian suichtists believe the growth of the seals is proportional to the length of the figh, shift that the length at the length of the figh, shift that the length at the end of each previous year of its life can be calculated from the first-portional width of winter rings on the scale. The general conclusions to which the evidence and the mathematical tests lead are; (a) That the age determinations can be made with a

considerable degree of accuracy from salmon and seasistance of suggest of source; from samou as the results of certain other species, such as haddock and out, the amount of reliance which can be placed on the results depending to a certain extent on the locality from which the fish is taken; (a) That the growth determinations can be made with a considerable degree of accuracy from the measurements of the scales combined with the length of the fish, using a modified form of the Norwegian method; (3) That the varying influence of food and temperature in the production of winter rings in scales is as yet indeterminate, although certain progress has been made in this investigation by experiments

on plaice and founders in tanks.

Galveston Sea Wall Extension.—An important improvement and extension has been made to the concrete sea-wall, five miles long, which was built about seven years ago to protect the city of disluston from a rejetition of the flood of race. The great flood of race overflowed the top of the defences. It was therefore decided to build a 5 ft. curtain wall along the top, and to extend the eastern end by two miles.

Guadalquivir to be Dammed .- A scheme has been put forward to render the swift-flowing river Guadalquivir navigable between Seville and Cordoba. It is proposed to build eleven dams on the river, similar to that across the Rhine at Chevres, each with an opening of about ten metres, and varying in height between six and ten metres. The cost of the work will be ton metres. The cost of the for its construc-tion will be twenty years. The differences in water level will be overcome by eleven modern locks. Barges of set tons capacity will be able to use the stream, and it will be possible to form convoys of two or three barges and a tug of zso tons. One important feature of the project is that the piles of the dams will be used for the construction of bridges connecting the two banks at eleven different points. At present there is only one bridge over the (inadalquivir in the whole length of zzz miles.

Hair and Eye Colour .- Professor F. G. Parsons in a lecture on "The Distribution of Hair and Eye Colour in the British Isles," to the Royal Anthropological Institute, stated that the index of colour based on hair only was given by Beddoe in 286 as a; 8 dark. His own index showed these subdivisions of percentages—red, 4-8; fair, z; 8: brown, 38 9: dark, 36 6; black, 3 9. The original man had black hair and black eyes. Contrary to popular belief women were darker than men, and even in districts where the population was fairest this held good, but where the population was generally dark there was very little difference. He gave the following representative table of darkness :-

No. of Index Differ Records. Male Fem'e ence.

Differ-Four Northern Counties 1767 a6's 33'5 7.3 Three Eastern Counties 2563 34'4 38's 3'8 Two Western Counties 4057 **683**3 45'5 37'7 46.7 I.S London .....

In Scotland, the fairest populated part of the In Scotland, the terress populated part of the British fales, the women were 8:9 per cent. darker than the men; in England s:2; and in Wales a little over s. Town people were generally darker than country people. In the east and north the hair and eyes usually matched; in the west central districts there was much difference between them. In Wales, where most of

the people had dark hair, they had not dark eyes In those parts of the country where the was the most pure Nordie and Caxor blood, the hair and eyes harmonised, and the reverse was the case where the Mediterranean type was a

strong local strain. A combination of fair hair and blue eyes was to be found in Ireland. "Lustana" may be Raised.—I. M. Emile Bertin, a distinguished French scientist, a member of the Institut de France, and a former Director of Engineering in the French Navy, has put forward a proposal for raising the wreck of the Lusitania, which lies in ago ft. of water off the Old Head of Kinsale, where it was sunk by a German torpede. His plan is to construct a floating chamber 300 yards long by zee wide and so in height, which would be attached to the wreek of the vessel at low tide, by means of Soc steel cables, and so manipulated as to raise the wreck as the tide rose Once lifted and supported by this floating chamber the wreck would be towed towards the shore, where pumping operations might be carried out. The most problematic part of the proposal is the scheme for beaching the vessel. M. Bertin says that, when once the necessary cables have been attached, there should be no difficulty in raising the wick from three to four metres nearer the surface by taking advantage of each tide. (Ince part of the wreck has been brought above the level of the sea the work of the divers would be greatly facilitated. "The difficulty will lie in the fact that no div dock exists which would be capable of receiving both the floating chamber and the wreck," status M. Bertin.

Microbes in Fossilized Amber -- Dr. Galippe, of the French Academy of Science, has discovered a number of micro-organisms in fossilised amber Some time ago considerable interest was shown in the discovery that microbes remained alive for hundreds of years in parchments and papyri, and the question as to whether such microbes still had power to trausmit the virus of plagues such as the Black Death was much discussed. Living organisms incomparably older than the microbes found in Exyptian papyri have been discovered by Dr Galippe, and it is thought that these organisms may probably be among the very early elements possessing life to inhabit the earth. Dr. Galippe's discovery was the result of investigation into the composition of several pieces of fossilised amber Examination showed him that the specimens were full of micro-organisms, which he considers can only have been imprisoned in the amber whilst it was in course of formation. As soon as these organisms were set free from their prison they manifested very evident signs of life, and, when carefully cultivated, developed great activity.

Monny a 3,coo-fon Building.—In the Engineering News Record may be found an account of

the moving of a 3,000-ton building, measuring 93 ft. by 65 ft., over a distance of 435 ft. The new site was first cleared and the foundations laid. The walls of the building were under-pinned with steel needles on timber shoes, supported on twelve sliding ways, and interior concrete columns carrying one-third of the total weight of the building were similarly supported. weight of the british were similarly supported.

The walls and columns were then out away from
the foundations and raised by see jacks. Three
se horse-power hoisting whiches supplied the
pull for removing. The ways along which the
removal was effected were laid only 60 ft. fri advance of the building, sufficient for a day's

haul of ge ft. The entire removal was accomplished in nine stages. Anerica does not have it, all its own way in this respect. A timber and ferro-concrete building weighing up tons, 6e ft. in length, 6e ft. in breadth, and two storeys in height, situated at Burnside, near Glaspow, has been moved about 8e ft. from its original site without any internal disturbance, and even without interruption to the business transacted inside. The cast of demolition and re-crection would have been £, 1,000; the work of removal was about one-third of that sum.

Niegara River and Ricetrioity.—Mr. T. Konnard Thomson, a consulting engineer, has put forward a plan for damning the Niegara River, and thus creating 2,000,000 horse-power of electricity. The structure proposed would be an unmense convex affair which would have a tendency to force the loe over the top in the spring and allow it to slide rather than fall down the other side. The base of the structure yould be about 700 ft. in width, but a large portion of the necessary generating plant could be installed in the interior of the structure. The dam would create a head of xos ft. below the foot of the falls, turning the present rapids and whirlpool into a long narrow lake, but having plenty of possibilities for rapids below the new falls. Thus all the water still going over the old falls and what is now used at the plants near to the falls would be utilised. It is estimated that the dam would cost £20,000,000. The falls would be preserved for the present Mr. Thomson says that if any further great volume of water is taken from the river—and Canada is now taking every drop she can get—there would be nickly greater days of services received.

Nome and the Nerrous System. — Professor Walker, of South Kennington, has been conducting a series of experiments to determine if, in the absence of any ordinary visible signs of emotion in a person, electrical signs of "emotive discharges" can be detected by the galvano-meter. It was found that "large and sudden" electrical responses which are independent of any muscular movement accompany a great many of the shocks and alarms of life. In the first series of experiments strong and disagreeable stimuli were used—s g., an unexpected loud sound, an unexpected burn (lighted match under hand), a disagreeable pungent smell, a painful thought. While muscular movement might be absent, marked electrical reactions occurred. In a Belgian woman who was told to think of her native land-she had seen various episodes of the derman occupation—a very strong re-action followed. The most effective ideas were such as were accompanied by disagreeable or painful emotion. The threat of a burn was often more effective in altering electrical relations than the burn itself. Lighting a match might give a larger effect than the application of a match to the free hand. The apprehension of a bad smell which had just been experienced proved to the particularly effective. The expected prick of a needle produced in some cases more effect than an unexpected prick. Ou Fuel Locemotive.—Oil is rapidly coming

Oil Fuel Locamotive.—Oil is tapidly couling into its over in our industrial life. In May last the London and North Western Railway Company fitted the Watt locomotive for burning oil, and also has since been tried on passenger services of various kinds. The Scaras Oil Burning Company's system was the one installed in the sender of the engine is a tank in place

of the coal. The oil, which is the residuum of patrol, is fed by pipes to the humer in the firebox by force of gravity. It is vaporised by steam as it falls from the feed sipe into a fanshaped receptacle. Not until it it thus vaporised is the oil inflammable. Given the requisite materials a locomotive can be converted from coal to oil-burning in four days. The advantages claimed for the Soarab system are that oil fuel is more easily handled than coal. The laborious task of stoking is eliminated. The engine emits neither smoke hot sparks, and as the combination of oil is almost perfect there are no ashes or dirt to be removed after a run. A train, which requires the provision of, say, yells. Of oul per mile, can be run on about 3sih of oil.

Plants Astern.—Sir Jagadis Bose, at University College, London, explained the creacograph, his own invention, by which plants are mude to record their life-story. Plants, he said, had a conducting tissue analogous to the nervous system of animals, and an experiment with a mimosu showed how its leaves contracted when subjected to shock. A remarkable record was that obtained in investigating the problem of sleep in plants. A shock was applied every hour of the day and night, and showed that from twelve to five o'clock the plant was wide awake, at eight it was getting aleepy, and it went fast asleep until nine a.m., after which there was a slow awakening, the responses to shook becoming gradually stronger after being absent while the plant slept soundly. Under chloroform, he said, the plant was at first excited and eventually died with a marked death tremor due to electrical discharge.

River Ervesus Prevented —An ingenious plan has been devised to protect the banks of the Missouri River against erosiou. It consists of concrete pile jettles which check the current without diverting it or causing destructive eddies. They carry wire cables, to which are attached trees and brush or frames faced with wire netting on the upstream sides. The velocity of the current is so reduced that the materialia suspension is deposited and a bar or sheal thus built up where erosion has occurred or is thicatened. Some of this work has been done near Omaha.

Shell as a Method of Research.—Six J. J. Thomson, in discussing various methods of studying the constitution of matter, suggested that the sense of smell might be brought into use, for even man, who had nearly lost that sense, could detect a minute proportion of come, equal to one in a million. He would like to see an experiment with hounds, whose bustness it was to smell, to ascertain the quality that they were able to detect.

Steel-Making by Scoret Process.—The Morning Post of February 17, 1920, contained a long article from its Paris correspondent stating that three days previously he had witnessed five experiments as a works in the city, each of which involved the production of a ton and a half of "high-class steel." The novelty of the experiments consisted in the fact that the steets were made in some form of "converter" of the Bessener type. Usually this process does not give a sufficiently scientific control of the product to eachle high-class steels to be made. In the experiments mentioned certain "secret "single stances" were added which had the effect of controlling the quality of the metal produced, so that it could be used as a bests for the

manufacture of high-grade alloy steels. The process is said to have been worked out by four intrentors, two of whom are Belgians. It was stated that they had decided not to patent thair method, but to operate it as a secret process.

Stone Age in Ceyton.—Mr. E. J. Weyland, late Assistant Mineral Surveyor to the Ceylon Government, has published an article on the Scone Age in Ceylon, in which he states his belief that there is no evidence that the Veddas passed through a stone age phase in Ceylon, They are assumed to be immigrants from the Indian peninsula, and the Palseolithic age dates from a period long antecedent to their arrival furthe island. The Ceylon implements fall into two groups—that of the hills and that of the lowlands. Pigmy fints are abundant, and Mr. lowlands. Pigmy flints are abundant, and Mr. Weyland believes that they were used mainly in boring bone needles. The Chellean type is represented by the hand-axe, the Mousterian by sorapers, and the Aurignacian by pointed implements with edge triuming.

Stormy Petrel's Courtship.— Mr. Audrey
Gordon gives an interesting account of the

nesting habits of the stormy petrel in British Birds, the result of observations taken during a stay on the Inner Hebrides. He believes that certain weird noises uttered when on the wing during dark and stormy nights, or when the nights are misty, are part of the courtship performances of the males. During this time the birds circle round the nesting area at a great speed. While this is going on an incessant "purring" can be heard from the female birds

in the rocky crevices.

Turbine Record Run.—A world's record in the operation of a multiple-element steam turbine of the cross-compound type was established at the Naragansett Electric Lighting Works, Provithe Naragansett Electric Lighting works, rrovi-dence, Rhode Island. The 45,000 kilowatt turbo generator ran continuously for 25 days at hours 36 minutes. No special preparations were made for the run, during which 51,204,000 kilowatt hours were generated, or considerably more than the whole output of the company for any year before rays. This continuous operation year before rers. This continuous operation was made possible to some extent by an See-gallon

Was made possible to some extent by an esception self-contained lubricating system.

Vulcanising Rubber by the Cold Process.—A new method of vulcanising rubber has been invented by Mr. S. J. Peschey, Lecturer in Chemistry at the Manchester College of Technology. The present method of vulcanising is to heat together rubber and sulphur to a temperature of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the contro perature of about 138 deg. centigrade. It has therefore not been easy to get combinations of rubber with raw materials that will stand so high a temperature. Mr. Peachey's method is one of cold vulcanising. It makes use of the two gases, sulphuretted hydrogen and sulphur dioxide, which react on each other to produce water and free sulphur. Mr. Peachey has found that when crude rubber, either in a solid form or in solution, is treated with these two gases, the sulphur produced by their inter-action vul-canines the rubber. If the rubber be mixed with a waste material, such as sawdust or leather rerape or paper, and the mixture is vulcanised, the resultant materials will serve a variety of methy purposes. Under the old process the heat would have destroyed the properties of the leather, the sawdust, of the paper. The immediate purpose to which the new discovery is likely to be put are the manufacture of linears the heavier kinds of wallanaws and actiloum, the heavier kinds of walipapers, and arti-

ficial leather upholstery. It will also be possible to make one-piece boots without stitching.

Water Distring.—Mr. A. J. Ellis contributes a report on the "Divining Rod" to the publications of the United States Geological Survey. He considers that for all practical purposes the rad" is the properly described and of no subpose. "rod" is thoroughly discredited and of no value whatever in locating either water or mineral ores. Mr. Ellis dismisses the claims of various mechanical "water-inders" as purely specula-tive and quite unsound in principle. In the September number of Discovery, however, the mystery of "downing" was discussed at length by the editor, who decided that the evidence was all in favour of certain individuals possessing powers of this sort.

Water-Power in Canada.-Mr. Leo G. Dennis, Hydro-Electric Engineer of the Canadian Commission of Conservation, has reviewed in the Engineer the situation in regard to water-power development in the Dominion. In 1900 less than see, ooe h.p. was utilised, as compared with a, 383, a40 h.p. now available, sub-divided as follows:—

Ontario	78,600	Nova Scotia New Brunswick Yukon	17,000
Alberta	34,500	Buskatchewan	40

Of a total of 525,000 h.p. installed for paper and pulp manufacture, at least, 475,000 h.p. is derived from hydraulic sources. Canada's potential water-power resources are placed, at 18,832,000 h.p. sub-divided as follows:—

	power		hower
Quebec	6,000 000	Saskatchewan	200,000
Ontario	g,800,000	Nova Scotia	200,000
British Columbia	3,000 000	Yukon	100,000
Manitoba	2 797,000	North West Ter	
Alberta .	462,000	ritories	50,000
New Brunswick	300,000	Prince Edward I	7.000

Water-Poser in Tasmania.-Two articles in the Engineer describes the hydro-electric power works at the Great Lake, Tarmania, situated at a height of 3,350 ft. above sea level. From the southern end of the Lake the River Shannon finds an outlet some two miles west of the bed of the River Ouse, and the two streams flow parallel for some distance. But as the fall of the Ouse is much more rapid than that of the Shannon, the former river, at a point opposite the middle of the lake, has an elevation of zeoft, above it, but a few miles south the Ouse has fallen to more than x,000 ft. below the Shannon. A short connection between the two rivers enables a very high head of water to be obtained. The head-waters of the Ouse will be diverted into the lake, and by this means a total capacity of 70,000 it p. will be available at the turbine shafts. The dam across the southern end of the Great Lake. which impounds the water to a height of m ft. above the sill, will be raised to give an effective

height of 40 ft.
Wettest Place in the World.—According to the
Monthly Weather Review of the United States Department of Agriculture, the wettest place in Department of Agriculture, the wettest place in the world is not, as has been supposed, Cherra-punji, in the Khasi Hills in India, with a mean annual rainfall of 456 ins. That distinction belongs to some of the mountains in the Hawalian Islands. Thus on Mount Waisleale, a peak 5,080 ft. high, there was recorded during the periods August 2, 1917, to March 26, 2234, and May 31, 1915, to August 13, 1917—a period of r.78 days—a total precipitation of a.205 ina., or an average of 27047 ina. per day. In a year of set days this would amount to 476 inches. Other rainy places in the Hawaiian Islands are Puu Kukui, with a seven years average of 369 ina., and one on Hawaiian Island where the rainfall in 1914 amounted to 304 inches.

Myriesa triefyraphy and Telephony.—Considerable progress in the use of wireless for private and commercial purposes was made during use. A practical demonstration of Marconi wireless telephony to and from a Handley-Page aeroplane in flight over the Eastern Counties was made in May. In June Dame Melba gave a concert at the Marconi Company's station at Chelmsford, and hy means of the wireless telephone her sougs were transmitted over a radius of 1,000 miles. In August a business conversation was carried out between Loudon and an Instone-Vimy machine, crossing the Channel to Paris, by means of the ordinary telephone exchange combined with wireless telephony. The Radio Corporation of America are building on Long Island the largest wireless station in the world, by which an immediate message service will be established with France and Germany, and ultimately with Buenos Ayres and other parts of South Americs.

Wood Pulp Substitute.—From successful experiments carried out at Para, it appears that the fibres of a plant known as aninga, which grows freely in the marshy districts of South America, are likely to be of great value as a shetitute for wood pulp. The crops of aninga one every year—are abundant, and the treatment simple It is said that the quality of the cellulose is very good, and that the yield

of paper is so per cent. greater than from Norwegian pulp. One prominent Brasilian chemist asserts that the anings fibre can be treated so as to give a product superior to cotton, inasmuch as the filaments of the latter under the microscope appear twisted, while the Brasilian fibres are quite straight. It is estimated that at least zgo.co tons of anings cellulose could be exported every year, the value of which would be comparable with that of the rubber now exported from Pare.

World's Largest Wooden Dry Dock.—The largest wooden sectional dry dock in the world has been constituted by the Morse Dry Dock and Repair Company of Brooklyn. It is built in sections, each complete with separate pumping plant, and in such a manner that a 15,000-ton vessel 475 feet long can be raised by three sections, the whole of the six sections being able to accommodate vessels of 725 feet in length and 20,000 tons burden. Its first great task was to raise the 630-foot steamer Missesota clear of the water, which it did in twenty-five minutes.

X-Ray Thumb-Prints.—Dr. Pilon, of Paris, demonstrated a method of taking thumi-prints by means of X-rays, which was afterwards exhibited at the annual exhibition of the Royal Photographic Society in London. These "radio-metallographs," as they are called, of a thumb show the lines in the skin and also the shape of the nail and the angual phalange. The method employed is to powder the ball of the finger with salt, which is opaque to X-rays, then photograph it through and enlarge. Finger-print experts at Scotland Yard attach considerable importance to the invention.

### The Nobel Prizes.

THE Nobel Prizes are awarded from the income of a fund bequeathed to trustees for distribution to those who have contributed most largely to the common good, and is divided into five shares, which are devoted to workers in the domains of (a) Physics, (b) Chemistry, (c) Medicine or Physiology, (d) Literature, and (c) the Preservation of Peace The testator was the Swedish scientist Aifred Nobel, the inventor of dynamite, who died December 20, 2896, leaving a fortune of about £1,750,000. The first awards were distributed on the fifth anniversary of Nobel's death, Dec. 20, 1902. The awarding

authorities are the Swedish Academy of Science—(a) Physics, (b) Chemistry; the Stockholm Faculty of Medicine—(c) Medicine or Physiology; the Swedish Academy of Literature—(d) Literature; and a committee of five persons elected by the Norwegian Storthing—(e) Peace. The fund is managed by a Board of Directors elected by fifteen deputies appointed by the authorities above named. The Swedish Government appoints a President of the Board of Directors. Particulars concerning conditions, &c., can be obtained from Nobelstiftelsens Styrelse Norrlandsgatan 6, Stockholm, Sweden.

Actions and Amy Augarde).

Actions and Amy Augarde).

Alburth.—Nor 20, 1919. Sacred and Profane Love, a play by Arnold Bennett (Messra Franklin Dyall, George Etton, and J. H. Roberts, and Mesdames Iris Hoey, Hilds Bruce-Potter, and Jeannette Sherwin) Feb 10, 1920 Pygmalion, Bernard Shaw's play revived (Messrs. C Aubrey-Smith and Frank Bertram, and Mesdames Patrick Campbell, Marion Terry, and Agnes Thomas). May rr Vone, by Sacha Guitry (M. Sacha Gutry and Mesdames ) vome Printering and Stranne Avril) Ang. 9 The Unknown, a play by W. Somerset Maughant (Mears, Charles V. France, Basil Rathbone, Carence Blakiston, and H. R. Hignett, Lady Tree and Mesdames Ellen O'Malley, Lena Halling. day, and Haidee Wright) Sept as La Tosea, Victorien Sardon's play (Messrs Lyn Harding, Gerald Lawrence, and Gilbert Porteuns, and Mesdames Ethel Irving and Lucy Wilson)

ATHAMBRA. Jan. 22, 1930 Medora, an operetta by Denn Spranklin, with music by Vada Konem, English libretto by Rupert Hazell, and lyrics by Adrian Ross (Messrs Leslie Stiles, Jamieson Dodds, W. S. Percy, and Leo Stormont, and Mesdames Ada Roeve, Betty Stormont, and Margaret Campbell) June 1 Johnny Jones, a musical play by Harry M. Vernon, with music by Charles Cuvillier and lyries by Clifford Grey (Messrs George Robey, Eric Blore, and Pip Powell, and Mesdames Phyllis Bedells, Ivy St. Helier, and Netta

Westcott).

AMBASSADORS. — Dec 10, 1919. Sylvia's Lovers, a light opera by Bernard Rolt and Cosmo Gordon Lennox (Messrs. Patrick Byrne, Commo Gordon Lennox (Mosars, Patrick 1870e, Joe Nightingale, Heury Calue, and Pitt Chatham, and Mosadames Desirée Ellinger and Estty Chester). May no 1990 Grierson's Way, H. V. Ramond's play reviewed (Messars Franklin Dyall, Arbitose Manning, and Esmond, and Miss Cathleen Nesbitt). April so. The Grain of Mustard Seed, a saturical play by H. M. Harwood (Messars Norman McKinnell, Fred Kerr, Volpa, and Esuless Llewellyn, and Henry Caine, and Fewlass Llewellyn, and Mesdames Grave Lanc, Cathleen Neghitt, and Mabel Terry Lewis). Sept. sp. The White Beaded Bop, a comedy by Lennox Robinson (Mesars. Arthur Shrhait, Sydney Morgan, and Arthur Shields, and Mesdames Sara Allgood and

Armer's metals, and treatment state Angold and Maire O'Neill).

APOLLO. June 17, 1920 Such a Nice Frang Man, a farce by H. K. Maltby (Messus Sam Livesey, Russell Scigwick, and Edward Silk, and Mass Elizabeth Drury) July 22. Cherry, a coster musical comedy by Edward Knoblock. with music by Melville Gideon (Messrs, Wilfred Seagram, Harold Austruther, and Stockwell Hawkins, and Mesdames Marie Blanche, Enid Sass, Doris Patston and Marie Wright).

The following is a list of the principal suggestion in a French play by M. Maurice London productions of the year.

Abstrat.—68. 9. 1920. The Naughty Princes, opera bonte adapted by J. Hastings Rein Haye, Cathryn Young, and Mary Forbes). Relet Haye, Cathryn Young, and Mary Forbes, Edward, with music by Charles Cuyllier (Messra. Bonald Jeans and Charles Cuyllier (Messra. Wild Gesse, a musical contedy by Barde, with music by Charles Cuyllier (Messra. Jack Buchnan and Gilbert Childs, and Morton, and Mesdames Lily 8t John, Yvonne Mesdames Phyllis Monkman, Nellie Brierchiffe. Mesdames Phyllis Monkman, Nellie Brisrcliffe and May Beatty). May 12. Why Marry 7 a comedy by Jesse Lynch Williams (Messra A. E. George, C. Auhrey Smith, and Tarver Penna, and George, C. Auhrey Smith, and Tarver renna, and Mesdames Rosa Lynd and Henrietta Watson). June 26. The "Ruined" Lady, a conedy by Frances Nordstrom (Messrs. Auhrey Smith, Lance Lister, and John Williams, and Mesdames Rosa Lynd, Eva Moore, Evelyn Brent, and Joan Cockram). Sept 29. The Crossing, by Algermon Blackwood and Bertram Forsyth (Messrs Herbert Marshall and Hubert Harben, and Mesdames Irene Rooke and Marjotic Gordon). Oct. 18. The Romantic Age, a comedy by A. A. Milne (Messrs Arthur Wontner, H. O. Nicholson, A. Bronley Davenport, and John Williams, and Mesdames Barbara Hoffe,

Williams, and Mesdames Barbara Hoffe, Dorothy Tetley, and Lottie Venne). COTIT. -Feb 24, 2020. The Young Visiters, a dramatised version of Daisy Ashford's child-book by Mrs George Norman and Margaret Mackenzie (Messrs Ben Field, Harold Austruther, and Law-rence Hamay, and Miss Edyth Goodall). March z. Candida, Bernard Shaw's comedy revived (Messrs Bruce Winston, Nicholas Haunen, Lewis Casson, and Rugh Bayly, and Meadames Sybli Casson, and Rugh Bayly, and Meadames Sybli Thorndike and Pamela Page). Juna 23. The Old House, by Richard Pryce, based on the novel, Candlelight, by Mrs. Dudency (Measrs. Malcolm Cherry and Frederic Worlock, and Mesdames Gertride Elliott, Clare Greet, and Suzanne

Sheldon)

CHTERION.—Nov. II, 1919. Lord Richard in the Panty, adapted from Martin Swapne's novel by Syduey Blow and Douglas Hoars (Messra. Cyril Maude and George Shelton, and Mesdames Lydia Pilbrooke, Connie Ediss, Elizabeth Polluck, and Nellie Bowman).

DALY'S.—May 25, 1920. A Southern Maid, a musical play, by Dion Clayton Calthrop and Harry Graham, with music by Harold Fraser-Simson (Messrs. Bertram Wallis, Lionel Victor, Claude Flemming, and Mark Leater, and Mesdames José Collins, Gwendoline Brogden, and

Dorothy Monkman).

DRURY LANK .- Dec. 26, 1919. Cinderella, panotmime by Frank Dix and Arthur Collins, with music by J. M. Glover (Mesara, Will Evans, Stanley Lupino, Harry Claff, Du Callon, and Arthur Conquest, and Meadames Marie Blanche Florence Smithson, and Lily Long). June 24, 2005. The Garden of Allah, by Robert Hichens and Mary Anderson (Mesers, Godfrey Tearle, Basil Gill, Gordon Harker, Denier Warren, and Arthur Lewis, and Mesdames Madge Titheradge and Pepita Bohadilla).

Pepita Bongulia.

Duga og York's.—Nov. 21, 1939. Le Bourpoole
Gentithomme. Molière's comedy (Messiques
Gaston Ougier and Saint-Vallon, and Mesdames
Edmée Dormeuli and Georgette Debrzy). Nov.

25. Le Malade Imaginaire (M. Gaston Ougier and Enid Sass, Doris Patston and Marie Wright).

COLERUM.—Merch 15, 2500. The Truth About the Russian Danava, 147 Sir James Barrio the Russian Danava, 147 Sir James Barrio the Man, Remard Shaw's play revived (Messra (f. M. Lowne, Basil Foster, Reman de Lange, and William Lugg, and Mesdames Robert Loraine, Gerald Lawrence, Arthur Rarssvina and Noranne Rose).

COMEDY.—Jan. 5, 2500. His Happy Home, a farce by H. V. Willoughby, founded upon a sieurs Gaston Ougier, André Randall and George de Warfaz, and Mesdames Rambert and Georgette Debray). Jan. 6, 1980. Les Plaideurs (Messieurs André Randall, George Desplas, and Roger Treville, and Mesdames Georgette Debray and Rambert). Feb. 16. Kitty Breaks Loose, a and Hambert, feet, in the grant stick (Messrs. Arthur Whitby, Eric Cowley, Leslie Howard, and O. D. Roberts, and Mesdames Helen Haye, Mary Peter, and Ethel Newman). April 13. The Government Inspector, Gogol's comedy, translated by T. H. Hall (Wesers, Maurice Moscovitch, Claude Rains, and Leyton Cancellor, and Mes-dames Mary Grey and Jane Amstel). June 3. Madame Sand, by Philip Moeller (Messrs, Basil Madame Nama, by Fillip Mobile? (Messra, hash Rathbone, Hubert Harben, Frank Cellier, and Bdgar Kent, and Mesdames Patrick Campbell and Haidée Wright). July , Brown Sugar, a comedy by the late Lady (Arthur) Lever (Messra, Eric Lewis, Martyn Roland, and Herbert Marshall, and Mesdames Edna Best, Henrietta Watson, and Margaret Halstan). Oct. 23. Prisoilla and the Profligate, a comedy by Laura Wildig (Messrs. Frank Denton, A. G. Poulton, and Cyril Raymond, and Mesdames Iris Hoey and Madeline Seymour).

EMPIRR.—Dec. 26, 1919. The Red Mill, a musical comedy by Henry Blossom, with music Musical Comedy by Henry Mosson, with musical by Victor Herbert (Messrs. John Luxton, Ray Kay, and Little Tich, and Mesdames Amy Angards, Ivy Tresmand, and Gladys Simmonds). Feb. 18, 1930. Sunshine of the World, operetta by Gladys Unger and K. K. Ardaschir, music by U. Cuvillier (Messrs Randie Ayrton, Martin Iredale, and Alfred Clark, and Miss Clara Simons). April 7. Irene, a musical comedy by James Montgomery, with music by Harry Tierney (Messrs. Robert Michaelis, Robert Hale, and Pat Somerset, and Mesdames Edith Day, Margaret Campbell, Winnie Collins, and Daisy Hancox).

GAIRTY.—March 25, 1920. The Shop Girl, revived and brought up to date by Arthur Wimperis and Herman Darewski (Messrs. Robert Nainby,

Alfred Letter, Thorpe Bates, and Roy Royston, and Mesdames Evelyn Laye, Gladys Homfrey, Kathleen Hilliard, and Nancie Lovat).

GARRICK.— Nov. zz. zgrg. The Eclipse, a musical farce by Fred Thompson and E. Phillips Oppenheim, with music by Herman Darewski and Melville Gideon, and lyrics by Adrian Ross (Messrs Alfred Lester, Morris Harvey, Farren Sontar, and Arthur Hatherton, and Mesdames Teddie Gerard, Dorothy Monkman and Dorothy Hanson) May 3, 1920. One Night in Rome, a comedy by J. Hartley Manners (Messrs. Arthur comedy by J. Hartley Manners (Measrs. Arthur Wontner, Henry Vibart, and Barry Baxter, and Masdames Laurette Taylor and Lynn Fontanne).

Sagt. 3. The Dancing Man, a farce from the Emash of P. Armont and Jacques Bousquet (Measus. Jack Buchanan, Reginald Bach, Ben Mald, and Ronald Squire, and Meadames Violator Tree and Auriol Lee). Sept. 28. The Right to Strike, a "play of to-day," by Ernest Hutchinson (Messra. Holman Clark, Lauderdale Maitland Bassett Roe, Charles K. myon, Leon M. Lion, and Olaf Hytten, and Mesdames Marjorie Day and Lilian Christine).

Leaus, a "war anecdote," by Reginald Berkeley (Messrs. M. R. Morand, Charles Groves, Hylton Allen, and Henry Kendall, and Miss Renée Kelly). Sept. a8. Every Woman's Privilegs, a comedy by J. Hastings Turner (Messrs. C. M. Hallard, Basil Rathbone, and Herbert Ross, and Mesdame Marie Löhr, Helen Rous and Vane Featherston).
Oct. 30. Fidors, Sardou's tragedy revived (Measrs. Basil Rathbone, Allan Aynesworth, Henry Vibart, and William Stack, and Mesdames Marie Lohr and Ellis Jeffreys).

HAYMARKET.—Feb. 3, 1920. Tea for Three, a comedy by Roi Copper-Merrue (Mesars. Standey Logan and A. E. Matthews, and Miss Fay Compton). April 22. Mary Rose, a play by Sir James Barrie (Messrs, Robert Loraine, Norman Forbes, Ernest Thesiger, and Arthur Whitby, and Mesdames Fay Compton, Mary Jerrold, and

Jean ('adell).

HIPPORRIME.—June 16, 1980. Jig-Saw, a revue by Albert de Courville, Wal Pink, and Bdgar Wallace, with music by Frederick Chappelle and Edward A. Horan (Messrs. Stanley Lupino, Laddie Cilff, Fred Allendale, and William and Gordon Dooley, and Mesdames Winnie Melville, Nancy Gibbs, and Daphne Pollard, and the Dolly Sisters).

HOLBORN EMPIRE. — March 15, 1920. Tom Trouble, a "North Country" comedy by John Burley (Messrs. Nicholas Hannen and Lewis Casson, and Mesdames Syhll Thorndike and Clare Greet). April 19. The Showroom, a comedy by Lady Bell (Messrs. Nicholas Hannen and Jack Anderson, and Mesdames Sybil Thorndike and

Helen Ferrers).

Kinosway.—Dec. 31, 1919. In the Night, problem play by Cyril Harcourt (Measrs, Reginald Owen, Affred Drayton, and Leslie Faber, and Miss Jessie Winter. March 16, 1990. Sinners Miss Jessie Winter. March 16, 1980. Sinners Both, a drama by Herbert Thomas (Mr. Herbert Thomas and Miss Frances Ivor). April 9. First Lore, farcical comedy by J. Leslie Sparkes, and Miss Frances Ivor). April 9. First Lore, farcical comedy by J. Leslie Sparkes, and Malcolm Moffat, and Mesdames Kate Yates and Phyllis Joyce). May 19. Within the Law, Bayard Veiller's play revived (Messrs. Carence Blakiston, Dennis Wyndham, Kenneth Kent, and Harold Anstruther, and Mesdames Rdyth Goodall and Marjorie Day). Sept. 14. The Dodsy, adapted by Osmond Shillingford and A. I. Ellis from F. Molnar (Messrs. Henry Caine and Dennis Wyndham, and Mesdames Suzanne Sheldon, Alice Mansfield, and Mary Merrall). Oct. 19. The Brave and the Fair, a comedy by Cicely Hamilton (Messrs. D. A. Clarke-Smith, H. 8t. Barbe-West, Frederick Irving, and Reginald Nugent, and Margherita Yorke). Hilde Sims, and Margherita Yorke).

H. Roberts, Basil Sydney, and Frank-lin Dyall, and Mesdames Florence Buckton and Nell Carter).

### RESEARCH ASSOCIATIONS.

RESEARCH Associations are voluntary associations of British manufacturers for the systematic application of scientific research to problems in industry. In constitution they are non-profit-sharing companies limited by the guarantee of a nominal sum. Firms in an in-dustry which are engaged in the production of similar articles, or less frequently firms in-different industries which make use of the same or similar raw or semi-manufactured materials, combine in this way to improve these articles or materials, or discover new processes or to increase the efficiency of existing processes for the benefit of all British firms in the industry contributing to the common fund on an agreed scale.

To associations approved by the Department of Scientific and Industrial Research, the Government offer support by means of grants from a fund of a million sterling which has been placed at the disposal of the Department of Scientific a id Industrial Research (see page 50). Pre-war conditions having, more or less, obtained during the past year, music in England has some into its own. Opers, headed by the Covent Garden Season, has been well supported, both in London and in the Provinces; restivate have taken place; and concerts, several of which were of some note, made life agreeable for nusical amateurs. English compasers, if still phings for recognition, were afforded opportunities of showing their quality, and amongst the performers from other countries were a dozen or so whose better acquaintance is desired.

Cosen's Genden.—The Royal Opera, unfortunately, was not the Royal Opera of half-a-dozen years ago. The special cachet, to which singers of the first rank contributed, was lacking; and the audience and its strangs get-up seemed out of place, the stalls often suggesting the nighty of the home rather than a Covent Garden tenue. Signor Badini, a bartione, certainly was an acquisition to the Company, and Mr. Joseph Hislop, a tenor who had sung in Stockholm, enjoyed a well-merited success M. Dinh Gilly, who made his reputation during former seasons, was as welcome as of old, his fine expressive voice and intelligent acting creating as good an impression as ever; and Miss Mignon Nevadas, whose fresh, flexible voice, and complete understanding of the roles she interprets are so valuable an asset to the lyric stage, was heard to considerable advantage. But it must be confessed that the important name-part in Orphée 'was none too happily cast, and that the hard, thin voices of the new sopranos scarcely justified their engagement. Mistakes such as these are inexcusable.

The repertoire was very much on the old lines, since novelties, alsa, seldom pay for their production. The management, however, produced three short operas by Paccini: "Il Tabarro," "Suor Angelica," and "Gianni Schichi." "Suor Angelica" failed to arouse enthusiasm, but the other two, happily, were well received. Donizetti's entertaining "Don Pasquale" was revived; and though the score contains much that one would like to hear again, the opera did not prove to be a successful venture, only being accorded one solitary performance. Perhaps sufficient exponents of the art of the decane could not be found to make a success of the revival: The majority of those who formed the cast certainly did not do full justice to the engaging strains.

Other Operails Fentures.—A renumerative season was given by the Carl Rosa ('ompany at the Lyceum, during which a version of Dante and Beatrice was produced. The new work, however, did not suggest that its composer is destined to iffurninate the operatic stage. Luckity, the troups had its long list of established favourities upon which to fall back, and these drew large and appreciative audiences. The Directorate, which has no fewer than four companies "on the road," has acquired the old Turner's Opera Company, thus reducing competition. The Fairbairn-Milne Company also had a successful London season, at the Surrey Theatre. Like the Carl Rosa, it relied for support upon the standing dishes of the past. A novelty, "The Tempest," by Mr. Nicholas Gatty, gained much approbation for its obver ordestration. Indeed, Mr. Gatty seems to possess a horn sense of orchestral possibilities, for he arrives at his variety without having recourse to the hissare, and, at the same time, he avoids the obvious, which generally is another name for the banal.

The Company also was fortunate in having the co-operation of Mr. Fairbairn, whose ideas lipon stage management, accusery, and customes commend themserves to all who consider that tradition should be tempered with discretion.

Mention may be made of the O'Mara' Operation which tradition the receiver the receivers.

Mention may be made of the O'Mara' Opera Company, which, touring the provinces, gives performances of works suited to the need of its supporters. In this respect, the management displays wisdom. If a public cannot be found for all that is hest in opera it is well to give one's patrons exactly what they want. Failure to do so spells financial disaster.

During these various seasons there was considerable heart burning amongst. British composers of opera whose works were not accepted for production. Unfortunately, for the aspirants, managers cannot afrod to be philanthropists. For years past they occasionally have relaxed their sound business principles—at the expense of their pockets. Mr. Charles Manners, for example, during his super-active career as an impressive, offered prizes for homemade efforts, and produced them regardless of expense. And the result? They seldom survived the initial performance, while those critics who were in a position to judge of their merits found that the few pleasing pages in the score had-unhappily—already been introduced—into less recent scores. Not for a moment was plagraism intended; it was a case of two great minds having thought first.

Much the same thing happened to-day. The would-be British composer of opera is not sufficiently well acquainted with the music of his confrience, past and present, to be capable of checking what he has composed with what they have composed. Until the amirant is better informed, his attempts at originality are, it is to be feared, doomed to failure.

be feared, doomed to failure.

The "Promenade" Concerts.—The "Prothenades" at the Queen's Hall, as of old, have attracted music-lovers from the most distant parts of London; no suburb was too reconditions to send its musical contingent nightly to Langham Place. In fact, many a City clerk, rather than miss some particular item in the programme, would dine in town, subsequently hieting him to the evening's "Prom." People living in the outlying townlets and villages used to "assist," the discomforts attendant upon facing a dreary journey home in the dead of night vanishing at the thought of the pleasure in which they had participated. The devotion and enthusiasm of these pligrims, in short, knew no bounds. Students also attended in large numbers, for they wisely recognised that a capable slager and an impeccable solo instrumentalist provide the best of all chief-tlessops.

The programmes were much as in comeryears. One heard everything that had been heard before, and much that one would like to hear again—and again. The novelties, as usual, proved to be disappointing. Still, they were afforded every chance of "making good," for the admirable Queen's Hall Orchestra did, full justice to them. The composers usually have mistaken musicianship for musical feeling—two totally different tilings. The music, which has survived the changes in taste and these hillorations which are dear to the modern composer, has been founded on melody—jura and singles. That is why the God-gives gealing of the immortal Mozart remains an oasis in a wilderness of perplexing, or, at the best, learned

The most popular nights undoubtedly were those devoted to Wagner. At the commencement of the season there was some discussion in circles which mix music with patriotism as to whether "Wagner nights" should be supported. whener wagner nights should be supported. The insufficient course that German compositions had no right to figure in an English programms was put forward by illogical persons and taken up by their adherent. As, however, no successor to the gorgeous "Tannhäuser" overture, or to the various excerpts from the Williams on the various streets from the will will be found, and as these indispensible component parts of a promenade concert work known to bring money to the lox-office, common-sense triumphed. It may, by the way, he pointed out that Wagner, though a German of the Germans, was very much "agrin' the Government," with which he maintained a more place likelong foul. Adving his country, he or less life-long fend. Adoring his country, he could not tolerate many of its institutions.

The singers, as in former years, seldom were of the first rank, though the native-born instrumentalists again proved to be all that one could have wished. No country, in fact, produces better teachers of instrumental playing than does Hagland. The same, however, cannot be said of the people who profess to teach singing; with a few notable exceptions, they themselves

are in need of instruction.

Other Concerts .- Among those who returned to the scenes of former triumphs was Madame Calvé, incomparable as of old. Although many moons have waxed and waned since she first was heard in England, time has dealt lightly with her voice, the quality of which scarcely is impaired, even if the upper notes are not what they were a few years ago. The charm and fascination of her singing are as remarkable as ever, while the singer's fine art remains. That Madame Caive's last recital should not have been better attended was regrettable, since an artist of her calibre seldom appears in London. Possibly the concert was badly managed, good management being indispensable to a good house.

Madame d'Alvarez was heard upon many occasions, and if this popular contracto did not always sing music worthy of her attainments, she at least sang herself into the good graces of her hearers. Miss Suggia, a very clever and accomplished 'cellist, was extremely well re-ceived; and Mr. Heifetz, an American volinist, created a well deserved 'urors, recalling the acclamations which used to greet Kubelik.
Mention also may be made of the recitals given by Miss Gladwys Newberry, who appeared to considerable advantage. Her well-directed voice and interpretative ability did justice to some interesting songs by Ravel, Rhené-Baton, Cyrli Scott, and Poldowski, who was represented by his ever-welcome "Mandoline." Countless recitals, too, were offered by performers whose equipment was inferior to their ambition,

Indeed, it is to be feared that the majority of these ill-advised beginners must have lost heavily over their unhappy ventures; few of them even secured the "good Press" at which they aimed. But so long as concert agents persuade unfledged students into tempting fate will these unsatisfactory recitals continue to he given.

Other entertainments included innumerable " hallad concerts," which, like their predecessors during the fleeting decades, and for obvious reasons, do not call for criticism. Engineered with a view to advertising "all the latest songs" they served their purpose. The Queen's Hall Symphony and Saturday concerts were well attended, a clever and original orchestral piece by Miss Dorothy Howell, a new comer to the ranks of composers, being performed thereat. It had a great success, and was repeated upon

several occasions.

Festivals.—The musical year has been remarkable for various Vestivals. The Handel Festival took place at the Crystal Palace, the choir, under Sir Frederic Cowen's experienced conductorship, paying the necessary attention to those lightand-shade effects which were so necessary to good choral singing The "Messiah" and "Israel in Egypt" were performed, and there was the customary "Selection Day." The attendance, too, was satisfactory, the audience being drawn from all parts of the kingdom. Glastonbury also had its Festival, when a setting of the Arthurian Legend was included in the programme, and to the gratification of its hearers. Worcester rose to the occasion with its three Choirs Festival, and Mr. Damel Godfrey was indefatigable in his direction of Bournemouth's musical affairs.

Other seaside towns, both large and small, maintained their reputation for competent orchestral playing. In some instances a lack of strings was ingeniously made light of by utilising clarmets, and often with excellent effect. At the same time it may be pointed out that vaunting ambition o'erleaped itself in the case of an enterprising bandmaster who attempted the "Taunhauser" overture with a band which possessed no violins! The effect of the famous descending chromatic scale passages can be better imagined than expressed. However, his intentions were commendable.

Winter Music.-The winter brought back to London several foreign artists who had appeared with varying degrees of success during the spring and summer concert sessons. The customary orchestral concerts took place, being well patronised, and there was some activity in operatic circles. The majority of the critics, as usual, showed how dangerous a thing a little learning may be, their pronouncements often being more original than reliable.

For the rest, the musical year, all things con-

sidered, has been a satisfactory one.

GROBGE CHOIL.

### WHITAKER'S PEERAGE. Published in January, 1921,

will contain the New Year's Honours and (in addition to the Royal Family, Peerage, Privy Council, Baronetags and Knightage) a list of Companions of the various Orders of Knighthood, Commanders and Officers of the British Empire, Companions of the Distinguished Service Order, Members of the Royal Victorian Order, and Companions of the Imperial Service Order.

### The Bear's Meather (British Isles), 1919-1920.

NOVEMBER z, 1919, TO OCTOBER 31, 1980.

(1919) November was very cold, with frequent hall and snow, and many sunless days. Fogs were rare, and there was only one gale of a general character. Ground frosts and hoar frosts were frequent and often severe. The rith-reth was a particularly cold period, the minima at many places being the lowest Novemher readings for at least go years In Scotland as a whole the mean temperature was the lowest on record for November. The highest maximum reported was 63 at Killaruey on the agrd, the lowest minimum being - to at Braemar on the 14th. In the English Channel the lowest reading was 31 at Jersey on the asth. Ramfall, as a rule, was less than usual in amount, but the rainy days were more numerous. In the Midland counties only x 6 ins. fell on ao days. Sunshine was in excess of normal in Scotland and Ireland, but in defect in England. The sunniest district was Ireland S, with a daily average of a 1/4 hours, while the cloudiest was the Midland counties, where, with the smallest rainfall of any district, the average daily sunshine was only 11/4 hours. Solar halos were frequent. The Zodiacal Light was seen at Oxford on three days, and Aurora was seen in Scotland on four days The highest wind velocity reported was 72 miles per hour in a gust at Quilty on the sard.

December was dull, rainy and mild, with equent gales Temperature was above the frequent gales werage except in Scotland, but the differences were nowhere large. The highest of the maxima was 570, reported from several stations, while the lowest reading was 11 on the 26th at Braemar. Rainfall was normal in Scotland N., but was more than usual in all other districts. in some places the excess was very marked, and at Rothesay the total for the month, zr zo ins., was the greatest amount recorded in any month at that station over 120 years. The number of rain days was high, many stations reporting as or unwards. Snow fell frequently in Scotland, but only in a few places did it lie to any considerable extent. Hall was fairly frequent, and thunderstorms occurred on several days, the most widely spread storm being on the 4th. Bright sunshine was in defect over Eastern England and the Channel Islands, but in excess maximum, 62°, was the highest reading we elsewhere. The suppliest station was Bublin, in February for at least of years. Rights

with a daily average of s're hours. chester there were only seven hours' bright sunshine throughout the month, and at Hull only one hour. The Zodiacal Light was seen in Jersey on the 19th and in Oxford on the sist. Aurora was observed in Scotland on various dates, in Ireland on the 18th, and at Oxford on the goth

(1900) January was mild, wet and windy. There was cold weather during the earlier part of the month, when temperatures fell to zao in Scotland and to 16° in England, but later the weather became very mild, and during the week ended the 17th the mean temperature was above the average in all parts and by as much as 8.5° at Wokingham. as 8.5° at Wokingham. Strong gales were re-ported on several occasions, and on the syth, at Quilty, on the West Coast of Ireland, a gust of rro miles per hour was recorded, which is the highest on record in the British Islands. The mean temperature of the month was successful and normal in all districts except Scotland N. and highest reading recorded during the month was 63° at Colwyn Bay on the 17th, while the lowest was 14° at Braemar on the 3rd. Rainfall was above the average in all districts, the total fail in Scotland N. being half as much again as usual. At Fort William the total fall for the month was 15.8 ins on 30 days. In spite of the excessive rainfall, the amount of bright sunshine was on the whole in excess, and in Jersey the mean daily amount was a 65 hrs. Solar or lunar halos were seen on za days, and Aurora on 21 days. Thunderstorms were reported on the 9th, 12th and 31st, the storm on the 31st being accompanied by heavy hail.

February was mild and, except in the north and north-west, dry. Gales were rare, the most notable being between the 9th and zxth. The strongest gust, however, was recorded on the zst at Paisley, 74 miles per hour. Temperature was above the normal in all districts, and by as much as 3.6° in England N.W. The highest reading reported was 64° at East Ham on the 18th, while in Jersey the maximum for the month was only go. The lowest reading was 18° at Garforth, near Leeds, on the 5th. At Moltham, Yorks, the maximum, 6s°, was the highest reading recorded in February few at least as when the Billian and the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the

and Iraland N., but was below elsewhere. In Scotland N. the total was almost double the average, while is the Roglish Channel it was less than one-fourth of the usual amount. There was great differences in the amounts at individual stations. Thus Aberdeen had a total of res that, while at Kingussic, in nearly the same latitude on the western coest, the amount was 19 ts ins. Sunshine varied from a daily average of see hrs. in Soutland N. to 3 es hrs. in the English Channel. The sunniest stations were Jackey, with a mean of 3 so hrs., and Ramagate, 3 so hrs., and Ramagate, 3 so hrs., and Ramagate, 3 so hrs., and there was a wide display of Aurora on the sath.

Narch was unusually mild, with a marked absence of cold drying winds, and but few gales. Temperature was above the average in all districts, the excess ranging from e-g<sup>2</sup> in Ireland S. to 4-z<sup>2</sup> in England E. The highest reading reported was 6g<sup>2</sup> at Woking on the soth, while the lowest was zg<sup>2</sup>, which was observed both at Leadhills (Lanark) and at Wokingham (Berks) on the 9th. Rainfall was above the average in all districts except England E. and S.E. and the English Channel. The general rainfall expressed as a percentage of the normal was z-Bugland and Wales, zg<sub>2</sub>; Sotland, zg; Ireland, zg<sub>2</sub>; and British Isles as a whole, zg<sub>2</sub>. There was much anow during the first half of the month, and in the Midlands on the z4th-zgth snow lay to the depth of a foot. Sunshine conceded the average in England E., S.E. and the Midland counties, but was normal in Footland E., and was in defect in other districts. The suaniest district was England E., with a daily average of 4-66 hours, and the sunniest station was Felixatowe, with a daily mean of 5-4g hours. Halos were not very numerous. The Zodiaoal Light was observed averal times, and Aurora was seen over a wide area on the

and. Aurora was seen over a wide area on the sead, accompanied by a magnetic storm.

April was dull, unsettled, and wot, with but little strong wind. The strongest force in a gust was pa miles per hour, which was reported on the seth both at Faimouth and at quility. Temperature was above the was ago in Rigiand, but was normal or below apormal in Scotland and Ireland. The differences from normal were, however, not large. The highest reading reported was 66° at Woking on the sard and asth, while the lowest reading was sar at Esk-dalemuir on the Sth. In the English Channel the lowest reading was 46°. Rainfall was above the average in all districts except Scotland N. The excesses ranged up to 25¢ ins. in the Midland counties, in which district many stations reported amounts exceeding twice the average. The large totals were due to the per-sistency of the rain rather than to exceptionally heavy falls, for there were only five stations at which falls of x in. or upwards in as hours were responded. Sunshine was less than usual in all districts except Scotland N., and in the Midland counties the daily mean duration was only one-half the average. At Buxton the daily mean was only 25 hours, while at Castlebay, in the Mebrides, it was as high as 5.79 hours. Solar halos were seen on several days, but the "Sediscal Light, which is mustly frequestry elsected in the spring, was reported on three-occasions only. Fogs were rare, and there were several thundersborms.

May wee wet in the north and west, but warm

and dry in the south-east. At first the weather generally was cool, but after the rith it was mild, and from the seth for about a week it was very fine. During the last days of the mouth it was cloudy, with thunderstorms and very heavy rains. There was a severe gale on the 3rd, when much damage was done in Leyland (Lancs) and in Dublin, the maximum gust velocity being ys miles per hour at Southport at 6 a.m. Temperature was above the normal in all districts, the differences ranging up to 3 x in England E. The highest reading reported was \$5' at Eye (Northants) on the 3th, while the lowest of the minima was an on the 1st at Bellingham (Northumberland) and at Eskdalemuir. Temperatures below 32' were noted in all districts except Ireland S. and the Euglish Channel. Rainfall was less than usual in England E. and S.E. and the English Channel, but above in the other districts. Some very heavy falls were noted, among them being 4½ ins. in 3 hours at Elkington, near Louth. Disastrous floods resulted, and great damage was done in Louth and elsewhere. Sunshine was in excess in the eastern districts, but in defect in other parts. In England E. the daily average of sunshine was 7 & hrs., and the daily record at Yarmouth for the four days asnd—25th exceeded 14 hrs. per day. Fogs were rare.

June was notable for its many thunderstorms, its marked absence of strong winds, and its few hot days. Till the reth the weather was dry but cold, with severe ground frosts in places, and at nearly every station the lowest reading for the month occurred during this period. Taking the month as a whole, the temperature was slightly above the average in all districts. The highest reading reported was set at Raunds on the ryth, and the lowest was sy' at Braumar on the gith. Rainfall was deficient in Scotland, Iroland and England E. and N.E., but was in excess elsewhere. Some heavy thunderstorm rains were reported. Thus at Beading, on the ryth, rea ins. fell in ag minutes, while at York, on the 18th, e. ag in. fell in se minutes, followed half an hour later by e. 79 in. in so minutes. Sunshine was more than average in Scotland, England N.E. and in Ireland S., but was less than usual in other districts. The mean daily duration varied from sys hrs. in Ireland N. to Sey hrs. in Scotland N. The sunniest station was inverness, Orkney, the aggregate for the month was 33 hrs., the largest in June for a years. At Belasound, Shetland, on the 18th, the record for the day was 175 hrs. For was experienced towards the end of the month A very fine solar halo was soon on the 18th, on which day nine mon were injured by lightning at Holensburgh.

July was dull, wet and cool, with but little strong wind and practically no gales. The strongest wind reported was as miles per hour in a gust at Paisley on the 13th. Temperature was below normal in all districts, the defect being greatest, 23°, in England S.W. The maximum reported was in many cases lower than in May or June, the highest reading being 30° at Yarmouth and at Geldeston on the 17th. On the other hand, the lowest readings were in most places higher than those in May or June, the lowest of all being 30° at Bracmar on the 7th. On the 5th at noon the reading at Beason (Gron) was 15° lower than the reading at Beason (Gron) was 15° lower than the reading at Beason (Gron) to lead the same sime. Rainfall wis in

excess in all districts, and in England S.E. the total collected was double the usual amount. At Sheepstor, Devon, the total fall was gap ins, and the Observer reported that the month was the very worst July he could remember. Sunshine was more than usual in Scotland N. by nearly : hr. per day, but in all the other districts it was below the average and in England N.W. it was less than two-thirds of the normal amount. The sunniest station was Felixstowe, with a daily average of 6½ hrs. Halos were observed on 8 days. Thunderstorms were reported from all parts of the country except the north-eastern counties of Scotland.

the north-eastern counties of Scotland.

August was dull and cool, with but little strong wind. Temperature was below the normal in all districts, the deficiency being greatest—3.4°—in England S.E. Summer temperatures were rare, the highest reading reported being 78° at Southend on the 8th.

Low minima were reported from most stations the lowest being 78° at Braemar on the stations, the lowest being 32° at Braemar on the seth. At Kew the minimum on the sast, 43°, was the lowest reading recorded there in August since 1891, while at Falmouth the minimum on the same day, 45°, equalled the "record" for that station for more than 50 years. Rainfall was less than usual, except in Scotland E and W. In Scotland S. and in England S. W. E. and W. In Scotland N. and in England S.W. the total recorded was not much more than half the usual amount. Thegeneral rainfall expressed as a percentage of the normal was:—England and Wales, 59; Scotland, 55, Ireland, 62; and the British Isles as a whole, 68. At Worksop the total for the month, 664 in was the smallest total in August for 45 years. There were, however, some heavy individual falls, causing floods in places. Thus on the 3rd, 2 so insfell at Cockburn Hill, near Edinburgh, in 3 hrs. Sunshine was deficient generally, the daily mean in England N.E. being nearly an hour and a half less than usual. The sunniest station was Guernsey, with an average of 8 5z hrs. per Thunderstorms were not frequent; during one on the rath, at Tenbury (Glos.), there was intense darkness with heavy rain, and hail the size of marbles.

Ham on the 1sth to 27° at Brasmar on the 281.

Ham on the 1sth to 27° at Brasmar on the 281.

Temperatures of 20° or below were reported in all districts except the English Channel, where the minimum was 27°, the maximum being 27°. In some cases the variation in temperature was very rapid. At Wokingham, Berks, the maximum on the 181 was 26°. Rainfall was below the normal in Scotland, England N.E., N.W., 288 S.W., 281 and in Ireland S., but above it in the other districts. The number of rain-days was nowhere large, but there was much daw, wetfog and mist, which gave the month its character for dampness. Sunshine was above the normal in Scotland N., but below it elsewhere, 281 in Scotland N., but below it elsewhere, 281 in Scotland N., but below it elsewhere, 281 in Scotland N., but below it elsewhere, 281 in Scotland N., but below it elsewhere, 281 in Scotland N., but below it elsewhere, 281 in Scotland N., but below it elsewhere, 281 in Scotland N., but below it elsewhere, 281 in Scotland N., but below it elsewhere, 281 in Scotland N., but below it elsewhere, 281 in Scotland N., but below it elsewhere, 281 in Scotland N., but below it elsewhere, 281 in Scotland N., but below it elsewhere, 281 in Scotland N., but below it elsewhere, 281 in Scotland N., but below it elsewhere, 281 in Scotland N., but below it elsewhere, 281 in Scotland N., but below it elsewhere, 281 in Scotland Detween the Sth and 281 and 281 in Scotland between the Sth and 281 and 281 in Scotland between the Sth and 281 and 281 in Scotland between the Sth and 281 and 281 in Scotland between the Sth and 281 and 281 in Scotland between the Sth and 281 and 281 in Scotland between the Sth and 281 and 281 in Scotland between the Sth and 281 and 281 in Scotland between the Sth and 281 and 281 in Scotland between the Sth and 281 and 281 in Scotland between the Sth and 281 and 281 in Scotland between the Sth and 281 in Scotland between the Sth and 281 in Scotland between the Sth and 281 in Scotland between the Sth and 281 in Scotland between the Sth an 8th and sand, and also on the latter date in Ireland.

October was sunny with little rain except in Ireland, but with much fog and mist. The first few days were unsettled, and there was a gale with heavy rain on the 3rd, when a gust velocity of 67 miles per hour was recorded at Valencia.
For the rest of the month there was but little
strong wind. Temperature was above the
normal in all districts, the excesses ranging from rae in Scotland E. to 36° in Ireland N. The highest reading reported was 36° at Brighton on the 9th, while the lowest was 29° at Bracmar on the soth, and at West Linten on the a3th.

Rainfall was less than usual except in Ireland, where it was considerably in excess. The number of rain days was small in all parts, and in Eng-land E. and S.E. amounted only to g for the month. In Scotland N. the total fall was less than one-third of the average. In spite of the low totals some heavy local falls were reported, and there were disastrous floods in Aberdeenand elsewhere in consequence. Sunshine was above the average in all districts except the Midland Counties, Scotland W., and Ireland S. In Eugland E. the daily mean exceeded the average by a'18 hrs. and resched as per cent. September was damp, with very variable september. When the september was damp, with very variable temperature. Gales were experienced on the temperature. Gales were experienced on the temperature. Gales were experienced on the temperature. Gales were experienced on the latter date. The mean temperature differed but little from the normal, the greatest variable tittle from the normal, the greatest variable tittle from the normal, the greatest variable duration. The Zodiacal light was seen in Jersey on 7 days, and Aurora was obextremes, however, ranged from 8c° at East served in Scotland on 5 nights.

#### HARNESSING THE SEVERN TIDES.

The Daily Telegraph of Nov. 85, 1920, announced that the Civil Engineering Department of the Ministry of Transport had worked out a scheme for the construction of a barrage in the estuary of the River Severn, from which it is estimated that 200,000 electrical horse-power per day could be generated at a cost of little more than 3/d per B. of T. unit. A similar scheme was noticed in WHITAKES ALMANACK for 1920 (p. 772) and the potentialities of the water-power to be derived therefrom ware estimated. The Ministry of Transport develops the barrage from the point of view of transport facilities across the estuary and of shipping facilities above the line of the Sexers Tunnel, in addition to the provision of electrical power from the tide-driven turbines. The Daily Telegraph adds a list of the world's greatest water-power installations, for parposes of comparison, as shown below:—

### Storms and Floods in 1919-20,

(sars) November 6. Fierce gale in Nova Scotis, much damage done. is. Heavy snow, 8 ins. deep, in Paris. 27. Severe drought in Australia and in South Africa; in the latter country is was the most severe drought ever experienced there.

December 6. Good rains in Australia. 20. Extensive floods in Flanders. 25. Flood at tootamundra, Australia, railway between Sydney and Melbourne partly washed away. 23, Avalanche at Davos-Platz, the first experienced there for persons injured. 29. Heavy floods in France 38. Drought broken by heavy rains in Victoria and New South Wales.

(1980) January z. Blizzard across Esthonia, thousands frozen to death, 300 dead found in one forest including babies frozen to death at their mothers' breasts. a. Severe floods in Paris, feine rose as it. s ins, above the normal, the highest ever recorded, 15,000 persons thrown out of work. 2. Floods in Holland, 150 millions of bricks destroyed as well as several factories. 21 Furricane over France causing much damage Frequent avalanches in Northern Italy causing many deaths. sa. Serious floods in Frequent avalanches in Northern Raiy causing many deaths. zs. Serious floods in Tuscany causing much danage. Avalanches in Switzerland. zs. Flood waters in Rhine and Moselle reached a higher stage than any recorded during zso years. zs. Floods in Budapest, houses washed away. zs. Dyke burst in North Brahant, causing very severe flood and the loss of thomsands of exite. of thousands of cattle.

February a. Storm in Newfoundland, waves reached the top of a tower soo ft. high and encased it with ice 9 ins. thick. 3. Cyclone at Cairns, North Queensland, a whole forest razed, damage estimated at £200,000. g. Great gale and blizzard in New York, few lives lost but much damage done, traffic practically suspended for a fortnight. 15. Heavy snow in Jerusalem, 39 ins. deep, the heaviest fall for 60 years. 20. Floods in south of France. 25-26. Very heavy rain in Madeirs, 2 g ins. in 48 hours. 28. Snow storms in Newfoundland, an express train timed to do a journey in so hours took 3 weeks over it.

March 7. Heavy gale in New York. 9. Hurricane in the Black Sea causing loss of American Red Cross steamer with 500 wounded soldiers. 15. Tornado in Kentucky, sohool house blown into an adjoining field, 30 persons injured. 17. An avalanche at Bernina, fiwitzerland, fell on a an avananche at Bernina, fiwitzerland, fell on a train, 2 persons killed. 19. Bed storm in Quebec, much damage done. Severe blizzard in western provinces of Canada, only three telegraph poles left standing in a stretch of 9. miles. 38. Tornado near Chicago, causing 256 deaths, thousands of persons injured. 38. Tornado in Georgia caused 25 deaths. 31. Severe floods in North Auckland.

April so. Tornado in Alabama and Tennessee. damaging several townships and causings deaths.

3. Violent oyolene at Nanligani, Bengal, causing 33 deaths.

3. Violent tetrms in Malay peninsula, an,000 rubber tress blewn down on one estate.

and great damage. 14. Terrific thunderstorms with hail and rain in central Spain, railway tracks washed away, lowlands inundated, great damage to full crops. sr. Great heat in Rome, maximum 9s", the highest reading recorded in May for 8e years. Se. Very heavy storm in the department of the Olse, near Paris, houses unroofed, much damage to crops, many cattle killed, hall over zs uns. deep. The drought which had continued since Christmas in Queens. land, New South Wales and Victoria was broken at the end of May by good rains. Losses due to the drought in 1918 and 1919 were returned at 348,878 cattle and 7,028,852 sheep.

June z. Very heavy rain at Mansfield, Central Germany, water 6 ft deep in the streets. 19. Violent thunderstorm in Belgium, 4 persons killed by lightning, and great damage done 21. Cloud burst in Naples causing much damage, streets flooded to inches deep. At the close of the month there were violent storms among the Pyrenees, causing loss of life and much damage to property. At Albany, West Australia, lat. 35° S., snow fell for the first time on record.

July 5. Extensive floods in New South Wales, interrupting traffic on railways. 7. Floods in north-west Australia, causing damage estimated at £50,000. za. Snow fell at Buenos Ayres, the second fall within 300 years. zx. Great floods in Vancouver, many thousands of acres in the Kraser River Valley ruined. The Matsqui dyke bruke, flooding ro,000 acres more and causing danage estimated at £00,000. 25. Thunderstorm with heavy rain at Barcelona, city flooded, 6 persons killed. 25. Typhoon at Luzon, Philippine Islands, thousands of persons rendered

August a Great floods at Jamshedpur, near Bombay, causing over see deaths. 9. Heat wave in America, temperature of zee in the shade is Connecticut, the hottest day for 40 years. 28. Tremendous floods in Japan, whole towns and villages being overwhelmed. 20. Land slide in Philippines owing to rain, causing the death of or persons. as. A great wave swept over Odomari, Japan, causing destruction of 370 houses and the death of 200 persons.

September 8. Very heavy rains in South Germany causing floods and much damage, towns isolated for days. 12. Severe storm of wind, rain and hall in Niagara fruit district, causing great damage to orchards and vineyards. 20 Lightning struck seven oil storage tanks at Tampic, and set contents on fire, causing great damage. 24. Torrential rains in the Engadine. causing severe floods, Ever Vedeggio rose nearly to feet in less than an hour. 24. Fierce storms in North Italy, crops badly damaged, railway station flooded, much loss.

October 7. Abundant rains in Argentina, greatly benefiting the crops. 22. Serious floods in the South of France, with loss of life and nuch damaga to properly. 27. Recurrence of floods in South of France, with much further as,000 reader trees blown down on one estate.

May a Great gale in Oklahoma, the town of assuring a good whist harvest. 3s. Fleods in Peggs almost totally destroyed, many deaths!

Perpignan, rivers overflowed their banks.

It is also unlawful to kill the game marked \* on

a Hunday or Christmas Day. In England hares, rabbits, woodcock, snipe, quail, landrail, and heath or moor game (and the eggs of swan, wild duck, teal, and widgeon) are protected under the Game Laws, though no closetime is fixed for them by those laws. In Scotland the same remarks apply to deer and hares, to the first four birds, and to wild duck; in Ireland to all these five birds, with the further addition of widgeon, teal, and plover. The close-time for all these birds (except quail and landrail in Ireland, for whose close-time see above) is, under the Wild Birds Protection Acts, 1860 to 1908, from a March to 31 July, both inclusive. Otherwise this close-time applies to all wild birds throughout the United Kingdom. The penalty for killing any wild bird in such close-time, or for selling or having in possession between a March and 31 July, both inclusive (unless the killing can be proved to have occurred at time and place to which the Act does not apply), is a reprimand and costs for the first offence, and gs. and costs for each bird for every subsequent offence, or, in the case of the undermentioned birds, £2 for each bird for each offence. In any case the Court may also order the forfeiture of any bird (or egg, where protected—see next column) in respect of which the offence was committed. In the Island of St. Kilds the fork-tailed petrel and St. Kilda wren are deemed to be included in the following list, and the birds marked 1 to be omitted.

American quail.	Kittiwake.	Scout.
Ank.	Lapwing.	Sealark.
Avocet.	Lark.	Seamew.
Bee-cater.	Loon.	Sea parrot.
Bittern.	Mallard.	Sea swallow:
Bouxie.	Marrot.	Shearwater.
Colin.	Merganser.	Sheldrake.
Cornish chough.	Murre.	Shoveller.
Coulterneh.	Night-hawk.	Skua.
Cuekoo.	Night-jar.	Smew.
Curlew.	Nightingale.	Snipe.
Diver.	Oriole.	Solan goose.
Dotterel.	Gwl.	Spoonbill.
Dunbird.	Ox-bird.	Stint.
Dunliu.	Oyster-catcher	
Eider-duck.	Peewit.	Stonehatch.
Fern-owl	Petrel.	Summer snipe
‡Fulmar.	Phalarope.	Tarrock.
‡Gannet.	Plover.	Teal.
Goatsucker.	Ploverspage.	Tern.
Godwit.	Pochard.	Thicknee.
Goldfinch.	†Puffin.	Tystey.
Grebe.	Purre.	Whaup.
Greenshank.	; Razorbill.	Widgeon.
‡Guillemot.	Redshank.	Wild duck.
Gull (except	Reeve or Ruff.	
black-backed)		Wimbrel.
Ноорое.	Sanderling.	Woodcock.
Kingfisher.	Sandpiper.	Woodpecker.

Offenders refusing their names and addresses are liable to a further penalty of zos, but the Acts do not apply to any person shooting on his own land, or authorising anyone so to shoot, any wild bird not included in the above list.

On the application of the local authorities, the Secretary of State in England and Wales, the Secretary for Scotland in Scotland, or the Lord Lieutenant in Ireland, has power to vary or abolish the close-time for any bird or birds in any county by order to be published in the Gazette. They may also direct that the above enactments shall apply to any wild bird not specified in the list, and may further prohibit the taking of the eggs of any wild bird in any county or part thereof. The Secretary of State in England and Wales, or the Secretary for Scotland, may also on the application of the local authorities make an order providing that in any specified area the taking or killing of any particular kinds of wild hirds shall be illegal during any period specified in the order. These various powers have been exercised in many cases—too numerous to recapitulate here.

Penalties are imposed on persons setting springs, gins, &c., on poles, trees, mounds, &c., so as to injure wild birds. Persons permitting such acts are equally liable. The use of a hook or like instrument for taking wild birds is forbidden.

#### HUNTING AND GROUND GAME.

There is no statutory close-time for fox-hunting or rabbit-shooting, nor is there, except in Ireland, for deer or hares; but there is an "unwritten law" which the sportsman respects as much as he does the enactments of Parliament. nated as he does the encounters of Parliament.

I November is the recognised date for the opening of the for-hunting season, which continues till the following April. Otter-hunting lasts from mid-April to mid-September. The period for does hunting or stalking varies from about 2s Aug. to rs Oct. for stags, and from se Nov. to the end of March for hinds. By an Act passed in

rega the sale of hares or leverets in Greet Britain is prohibited from March to July inclusive under a penalty of a pound. This does not apply to foreign hares. The statutory close season for hares in Ireland has been varied for some counties by order of the Lord Lieutenant, and it is now mostly from r April to as August.

#### ANNUAL CLOSE-TIME FOR SALMON.

I. ENGLAND AND WALES (including the Esk in Dumtries). The close time for salmon (including all migratory flah of the genus salmon) begins, for nets, on x Sept., and for rods on x Nov.; for both nets and rods it ends on x Feb. For putts and putchers the annual close season is from x Sept. to x May. By an Act of xgoy the Board of Agriculture and Fisheries may make provisional orders varying the law on these and other points. The close-time may also be varied by bye-law by local boards of conservators, provided it begins for nets not later than x Nov., with a minimum of xs4 days, and for rods not later than x Dec., with a minimum of gs days. The statutory dates have been varied as follows:—

		1

No fresh silmon may be sold between 3 Sept. and s Feb., accept such as come from parts beyond the seas, or as have been taken, if in the United Kingdom, by legal netting. During that period all packages containing salmon consigned by any common or other carrier must, be clearly marked with the word "Salmon. Salmon, dried, pickled, or cured abroad, or, if within the United Kingdom, between r Feb. and 3 Nov., may be sold after that date. The onus of proof that the fish were caught out of the United Kingdom, or, if within the kingdom, that they were caught during the legal netting season by legal means, or that, if pickled, they were pickled between r Feb. and 3 Nov., lies with the person selling or exposing for sale. The exportation of salmon from any part of the United Kingdom is prohibited between 3 Sept. and 30 April, unless caught at a time at which its sale in the place where it was caught would be legal, if in the United Kingdom: the caur probands lies on the person exporting. The capture and sale of "unclean" salmon, i.s., salmon recently spawned or full of spawn, are prohibited under heavy penalties. Roe may not be used as a batt in salmon angling.

II. SCOTLAND (exclusive of the Esk in Dumfries). The annual close-time must not be less than 168 days. It is, for nets, sp Aug. to so Feb., and, for rods, r Nov. to so Feb., except

as follows ....

#### WEEKLY CLOSE-TIME

In England and Wales net-fishing for salmon is prohibited from noon Saturday to 6 a.m. Monday, with an extension to 48 hours in certain districts.

In Scotland, from 6 p.m. Saturday to 6 a.m. Monday, and red-fishing on Sundays.

In Ireland, from 6 a.m. Saturday to 6 a.m. Monday.

CLOSE-TIME FOR TROUT AND CHAR.

The capture of trout and char in England and Wales is prohibited between a Oct. and 'a Feb., except (a) in the Thames and Lee, where the close season is from 12 Sept. to 32 March; and (a) in the cases noted below, where, under an Act of 1876, the close-time (for rods and nets, except where specified) has been varied by bye-law by local boards of conservators. In the districts marked \* the close-time applies only to trout. The sale of trout and char is prohibited throughout England and Wales from a Oct. to z Feb. :-

19 Into Lake 46 Rept. to 24 Jan

char, which live in fresh water, except those kinds which migrate to or from the open sea) is fixed from as March to ry June, both inclusive, for England and Wales except small parts of Norfolk and Suffolk, under a penalty of  $\mathcal{L}_{a}$  for a first and  $\mathcal{L}_{b}$  for a subsequent conviction. The close-season, however, does not apply to eels taken otherwise than by angling; or to freshwater fish other than grayling taken in certain private waters by leave of the owner; or to angling in public waters by leave of a board of conservators, or in private waters by leave of the owner; or to taking fish in certain cases for bait or for scientific purposes. Fishery districts may be wholly or partially exempted from this close-time with the sanction of empted from this close-time with the sanction to the Board of Agriculture and Fisheries. The Axe, Avon (Devon), Wye, Eden, and Towydistricts have been so exempted; also the Kent and Bela and Severu as regards pile; the Usk as regards eels; and parts of the Severu as regards fish other than grayling. For cels a separate close-time exists (so far as regards fixed engines in salmon rivers) in ampland from x Jan. to 24 June; in Ireland, with one or two exceptions, from xx Jan. to 30 June. In the Severn, elvers, or cel fry, are protected between x Jan. and the last day of Feb., and between xs. May and 30 June. Certain other local close-times exist for freshwater fish, under local Acta or bye-laws.

### PROTECTION OF CRABS AND LOBSTERS.

Under the Fisheries (Oyster, Crab, and Lobster) Act, 1877, it is prohibited to buy or sell crabs under 4% inches, measured across the largest diameter of the back, or lobsters under 8 inches, measured from tip of beak to end of tail when spread out flat. The capture of "soft" crabs and crabs with spawn is also prohibited. By local bye-laws of Sea Fisheries Committees (vide infra), the minimum size of lobsters and crabs

that may be lawfully taken in different parts of the territorial seas has been increased, and in some cases the taking of lobsters with spaws is prohibited, or a close season fixed.

#### CLOSE-TIME FOR OYBTERS. 11 1804

There are also local regulations for the profec-tion of oysters; and by the Fisheries (Cyster; Crab, and Lobster) Act, 287, a close-time for the capture and sale of "Deep-Sea Oysters" is fixed for England and Sootland, but not for Ireland, from 15 June to 4 Aug. ; and for all other kinds of oysters except oysters taken in the waters of a foreign state—from 14 May to 4 Aug. By the Sea Fisheries Act, 1868, fishing for oysters is prohibited from 16 June to 31 Aug. in the English Channel between lines drawn (1) from North Foreland to Dunkirk, and (2) from Land's End to Ushant—the territorial seas of England and France being excepted. This close-time, however, cannot be enforced till the Convention between England and France, included in the Act, is ratified; until that is done, the Convention concluded in 1839, which prohibits oyster-flahing in those limits from 1 May to 31 Aug., remains in force so far as French dahermen are concerned. But both Powers usually agree to suspend the but noth rowers usually agree to suspent one close season till 150 June in each year. In Ireland, taking cysters from licensed heds is larceny; and by 5 & 6 Vict. cap. 105, no cysters may be taken between 2 May and 2 Sept., though this close-season has been varied in the following cases:— Estuary of Suir..... I Jan. to 30 Sept.

Trales Bay ..... Galway Bay and Carlingford Lough .....

Strangford Lough ..... 2 Mar. to 32 Aug. Achil Sound, Clew Bay... 2 April to 30 Sept Sligo, Ballisodare and Drumcliffe Bays .... 2 May to 32 May.

t Mar. to 30 Sept.

z Jan. to 30 Nov. a April to 30 Sept.

### Licences for Shooting and Fishing.

GAME AND GUN LICENCES -A licence is required by every person who hunts, shoots, or takes game, except persons (in Great Britain) taking woodcock and snipe with nets or springes; proprietors, or tenants, on enclosed land, killing rabbits; persons hunting deer, or hares, with hounds; owners or occupiers, or their servants, killing deer on their own euclosed land; beaters and others, not holding guns, attending holders of game licences. Occupiers of enclosed land, or owners, having the right to kill game, may themselves kill hares, or authorise others to do so, without a licence, but such authority must be limited to one person at a time in any one parish, and must be registered with the clerk of the Justices of the Petty Sessional Division in which the land is situate. Even when the quarry is not what is legally known as "game," a "gam" licence is necessary. A game licence, however, covers a gun licence. Soldiers, saflors, volunteers, or constables, on duty, or at practice, need not take out a gun licence, nor need occupiers of land scaring birds or killing vermin on such land, or scaring brus of kinning verning on such land, opersons so acting under the orders of occupiers holding a licence. Unless, however, the occupier is himself licensed, he cannot authorise any unlicensed person to carry a gun. "Scaring" birds is not to be regarded as including killing of any birds, and "yermin" does not include rabbits. The rates of duty are given at p. 405.
FIRSHING LICENCES.—In all fishery districts in

England and Wales, and in Ireland, a licence to

fish for salmon is necessary, and in most English and Welsh rivers a similar licence is necessary for trout or char, except that a salmon licence includes the latter. In the Lune, Derwant, Severn, and Wye and in Norfolk licences for "freshwater fish" are in force. In Scotland no licence is needed. A licence is available only in the district, and for the season, in which it is issued, except that in Ireland rod licences are available in all parts of that country. The rates on salmon nets and other like, instruments range from \$ 20 downwards in England and Wales, and from \$ 30 downwards in Ireland. In the latter country the rate on draft nets, the kind most commonly used, is £3; in England and Wales it varies from £5 to £2. The licence duty on a salmon rod and line is £1 in Ireland. In England and Wales different rates are charged in different districts as follows (an asterisk signifies that lower

districts as follows (an asterisk signifies that lower rates of duty are chargeable for short periods, or for certain parts of the district):—

"Dee, 40/-; "Eden, "Derwent, "Exe, Fiampehire, "Wye, "Lisk, 30/-; Taw and Torridge, 24/-; "Lune, "Ribble, Clwyd & Elwy, "Conway, "Dovey, "Teify, Avon (Devon), "Dart, "Teign, Frome, Stour (Kent), "Yorkshire, "Tees, "Tyne, 30/-; "Dwyfach, Towy, 31/-; "Seiont, Avon, Brut & Parret Ake, "Camel, "Powey, 15/-; Cleddy, Taff & Ely, Ognore, W. Cumberland, 10/6; "Keset & Esweit, Rhymney, "Ayron, Severn, Axe, Trent, Tamel & Plym, 10/-; "Esk (Yorkshire), 7/6; "Ouse (Sissex), Wear, Coquet, Ouckmere, Bother; Adur, 8/-.

# Fishery Bistritts, Boards of Conservators, &c.

ENGLAND AND WALES.—The administration of qualified by ownership of lands or fasheries of the laws of close season, do., for samon and a certain value; and representative members, freshwater Fisheries Acts, 188s to 1907, and the Board of Agriculture and Fisheries Act, 1908, in the hands of local boards, with the Board of Agriculture and Fisheries as the central authorithm and Fisheries as the central authorithm are are also members representative of fresh-

triote have been formed, including generally all rivers running into the sea between the points named. Except in the cases marked † they also include the sea for three miles from the shore, or to the mid-channel in estuaries.

These Boards of Conservators consist mainly of three classes of members—those appointed annually by the Councils of the serious counties through which the rivers flow; as office members.

There are also certain bodies created by local statutes, having authority over the fisheries, s.g., statues, having authority over the maneries, s.g., the Thames Conservancy Board, Port of London Authority, Lee Conservancy Board, and Conservancy of the Medway.

The above-mentioned Boards have power to make bye-laws, not only for the regulation of the figures to salmon and treatwater Est, but

also, in certain cases, for the regulation of other

kinds of fishing which are prejudicial to such fisheries. They are also empowered to issue liesness for fishing for salmon, trout, and in some cases freshwater fish generally.

SCOTLARD.—In Scotland there are see Fishery Districts, nearly each separate river forming a district of itself, but only 37 Boards of Conservators. The powers of these Boards are limited to the Salmon Fisheries.

IRELAND.—In Ireland there are 24 districts, embracing between them the whole country, each with a separate Board of Conservators (see p. 846).

SEA FISHERIES DISTRICTS.—Under the Sea Fisheries Regulation Acts., 1888 to 1894, the Board of Agriculture and Fisheries has power to form sea fisheries districts within the territorial waters of England and Wales, and to constitute local Fisheries Committees, either for a single county or borough, or for several jointly. These Committees have power to make bye-laws, to be confirmed by the Board of Agriculture and Fisheries, regulating or prohibiting the use of

instruments for the capture of sea fish (including salimon), the deposit of rubbish on fishing grounds, &c. The following districts have been created, including in each case the adjoining coast and territoriat seas between the points respectively mentioned:—

Northumberland (coterminous with that county). a North Eastern, from Northumberland to Donna Nook in Lincolnshire. 3 Eastern, Donna Nook to Yarmouth. 4 Kent and Eases, Dovercourt to Dungeness, including the Thames estuary to London Stone near Yantlet Creek.

Sussex (coterminous with that county). 6. Southern, Western boundary of Dorset to Hayling Island. 7. Devon, and 8. Cornwall (each coterminous with the respective counties). 8 South Wales, Eastern boundary of Cardiff to Cemmaes Head to Haverigg Point 11. Cumberland, Haverigg Point to Sark Foot

Similar districts may be formed in Scotland under the Sea Fisheries Regulation (Scotland)

Act, 2805.

## Zeasonable and Unseasonable Fish.

1 HE following table shows the periods when the different kinds of edible fish mostly in use are "in season" and "out of season."

The letter p signifies that the fish are then

in their prime or most plentiful; the letter x signifies that the fish may be obtained, but are not at their best; the letter c signifies that it is "close-time" as fixed by statute.

(a) This is for sea crayfish (or crawfish). River crayfish can be obtained in the summer and autumn. It is illegal to take fresh-water crayfish from March to June.

(b) Foreign oysters can be sold in the close season, and are to be had almost all through the year, even though they have been laid dewn in English beds for temporary storage. (d) In the close season, salmon from Holland, and also from certain British rivers where not fishing is permitted later in the year than usual, are largely sold.

(c) For the first six months the built of our Londob supply of shrings comes from Molland, but Dutch shrings are far inferior to the Maifab; which are plentiful from July to December.

Dublin ...... Harp crowned. Tree, Fish & Bell.

In addition to the above, there have been Assay Offices at Bristol, Exeter, Newcastle-upon Tyne, Norwich and York, all of which have long been closed.

Makers Mark (instituted in 1363).—This is impressed by the maker, and consists of initial letter (or letters) indicating the Surname (or Christian and Surname) of the maker.

Date Mark.—The year in which the article is marked at the Assay Office is indicated by a letter on a shield, the tupe of letter and the shape of the skield being changed in cycles of so, ss or so years. In so-year cycles (London, invariably, Chester, alternately with sg, and Sheffield, alternately with sg), the letters J. V, W, X, Y, Z are omitted; in sg-year cycles (Birmingham, Edinburgh and Dublin, and alternately at Chester and Sheffield) the letter "j" is omitted from the alternate of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the from the alphabet; at Glasgow all the letters are employed in a se-year cycle

The Sovereign's Mark. - The " lion passant" introduced in the reign of

Edward L (1300) for niver articles only.

The Sovereign's Head.—The portrait of the reigning Sovereign was impressed on all plate chargable to duty assayed from 1764—1889 on. The duty on plate was removed in 1890, and the Sovereign's head does not appear on plate assayed before 1784 or after 1890.

The Crown.—On gold articles only, in lieu of the "lion passant" on silver.

Britannia.- A full-length figure of Britannia was impressed on silver plate of a special standard of fineness (zz oc. zo dwt. of fine metal to each ze dwt. of alloy) during a short period only, 1697-1780.

Storting Silver.—Articles of silver plate marked at an assay office are guaranteed to be of the requisite standard of purity and to contain at oz. a dwt. of the metal to each at dwt. of alloy.

Starling Gold.—Articles of gold plate marked at an away office are guaranteed to contain such amount of pure gold as is marked thereon by the assaying office in carets and decimals thereof. The relative values of the various standards is shown below :--

Pare gold, sa carats	بكد	6. <b>d</b> .

The Collector will find but little difficulty, in distinguishing a letter of one cycle from that of another, presuming his knowledge to be instantioned to judge by the style and period of the article itself, a.g..

An article marked with the letter F sysz-a can be distinguished from letter F ribers by the difference in the shape of the respective shields; as also those containing the crowned lectors of the respective shields; as also those containing the crowned and the lion market; the shapers

can be distinguished from letter I sees by the difference in the shape of the respective shields; as also those containing the crowned leopard's head and the lion passant; the absence of the sovereign's head in the former as against its presence in the latter case; the different form of the leopard's head (which was "crowned" until 1823); and lastly, the frequiarity of the stamp in the first case as compared with the uniformity of the latter stamp. These again can be distinguished from I restricted as before, by the different shield of the date letter only (the shields of the remaining marks being the same as those of reor-s); the absence of crown on leopard's head, and the presence of the Queen's vice the King's head.

### Imported Plate.

Any gold or silver plate or article manufactured out of the United Kingdom and brought to be assayed, stamped or marked at a British or an Irish Assay Office must be marked in the manner prescribed by the Order in Council of May 11, 1206, under which the mark for each Assay Office is ordained to be: \*Birmispham, Equilateral Triangle; \*Chester, Acorn and two leaves; \*Shefield, the sign of the Constellation Libra; \*Métindurgh, St. Andrew's Cross; \*Glasgoon, double block letter I' inverted; \*Dublin, Boujet. The annual date letter is to be added by the Assay Office, as for plate, etc., of home manufacture.

This Comparative Table shows the approximate period of each style. It must, however, be remembered that the transition from one style to the next was slow and gradual, and can often hardly be traced, so minute are the differences. It is only for convenience in alluding to the different stages of evolution that the division is made, for it must not be forgotten that the Architecture of England is one continuous development.

Note.—The first portion (I-VIII) of this table is based upon that given on p. 327, and Particle X, and "Modern" on p. 327, and "A History of Architecture on the Comparative Method" (gift ed.), by Sir Banister Fletcher. (Bateford.)

#### THE LONDON FIRE BRIGADE.

Headouarters: 94 Southwark Bridge Rd., S.E. z.

PREVIOUS to the formation of the Metropolitan Fire Brigade in 2866, the churchwardens and overseers of every parish in London, under an Act passed in 1974, had been compelled to maintain an engine for putting out all fires occurring within their own boundaries. For more than thirty years before 1866 the leading fire insurance companies had jointly organised and worked a fire-engine establishment of their On set January, 1866, the Metropolitan Board of Works took over these responsibilities, and on 1st January, 1867, the Board also took over from the Royal Society for the Protection of Life from Fire (founded se4) the service of the saving of life from fire. Under the Local Government Act, sess, the London County Council assumed control of the Metropolitan Fire Brigade, and in 1904 the title was altered to "London Fire Brigade."

On asst March, agas, the complement of

\* At the Customs Branch.

the Brigade consisted of :-- chief officer; 3 principal officers; and s.sp officers, firemen, coachmen and pilots; a technical and clarical staff of 3p, and an ambulance service staff of §5. There were 79 land fire-stations, 6 ambulance stations, 3 river stations; and the appliances in-cluded 8 horsed fire-engines, 48 horsed fireescapes, 75 motor fire-engines, 8x motor fire-essacaps, 75 motor inve-nightes, at motor inves-capes, 5 motor hose-tenders, 4 electrically driven tuintable long ladders, 79 lon, ladders, 36 smoke helmets, 36 hose carts, 4 fire-floats, and 4 steam fire-engines on rafts, 2 oil tank wagon, 16 motor cars, and 9 motor ambulances. There were 36 horses and 60 miles of hose in use by the Jiri-gade. The fire-alarms distributed over London numbered 1,58s. The number of calls to which the Brigade responded during the year ended sist December, 1918, totalled 3,326, and the fires numbered 3,463, of which 197 were classed as "serious," including calls and fires due to air

### NEW ZEALAND CROSS,-N.Z.C.

Ribbon. Crimson: FOR CONSPICUOUS BRAVERY: INSTITUTED to March, 1866.

In the first balf of the seventeenth contary (son has been cited as the best approach to a definite date) we meet with the earliest mention of the introduction of radio for the lessaning of friction upon roads. Beams of wood, some six or seven inches in breadth, were about this time laid down to facilitate the draught of the wagons in the violatty of some of the coal-mines at Newcastle; and as a matter of necessity the addition of "sleepers" had speedily to follow. In 1728, at Whitehaven, it is stated that from was first substituted as the material of the rails; and in 1767 it appears established that this revelution was adopted at Coalbrookdale, being followed nine years later at the Sheffield Colliery. As yet, however, only thick plates of iron were fastened to the surface of the wooden rails, and it was not till goes that "edge rails" were introduced, the credit of their adoption being assigned to William Jessop, on the Loughborough and Nanpantan line. James Watt had conceived the idea of utilizing steam for locomotion, and there is a record of a model locomotive having been used in Cornwall in 1764. George Stephenson, however, in the year 1865, was the first to bring the project fairly into practical shape.

The first Act obtained for the construction of a railway was that of the Surrey Iron Railway Company in reer, for a line ely miles long from Wandsworth to Croydon. In rees an Act was passed 'for making and maintaining a railway or transroad from the town of Swanses into the parish of Oystermouth, in the County of Gla-mongan, and for the hauling or drawing of wagens or other carriages passing upon the said railway or tramroad with men, horses, or

otherwise.

Up to 1840, inclusive, 299 Acts, authorizing the construction of 3,000 miles of line, had been passed. The inevitable reaction set in, and in 1841-s-3 only a few small Bills were passed by the Legislature ; but in the Liverpool and Manchester, the London and Birmingham, and other leading concerns were paying to per cent. dividends, and some of the smaller lines were yielding even larger returns, attention was naturally drawn to the remunerative character of this class of property, and the supply of railway shares became far below the demand. of railway shares became far below the demand. A flood of new projects appeared hefore the public, and the Legislature even, labouring apparently under the general excitement, encouraged promoters by relaxing or withdrawing the general opposition which had previously been offered. In 1844, 797 miles were authorized; in 1845, the prodigious total of 4,790 miles; and in 1846, the prodigious total of 4,790 miles, under no less than 29 Acts, obtained Parliamentary manction. The succeeding years saw some abatement, but still there were 1,663 miles passed in 1847, and 300 in 1848. These figures illustrate the rise and fall of the great fever known as the "railway mania."

The Railways Regulation Act of 1840, the first of the General Acts, provided for a month's notice being given to the Board of Trade before opening; being given to the Buard of Trade before opening; for returns of traffic to be made by the companies, as also of accidents involving personal injury; for Gevernment inspection of works, for the approval of bye-laws, &c. Afterwards were passed Acts for their better regulations, and for the approval of troops, sage, the Reliways Further Engulation Act of sage, the Reliways Clauses Compolidation Act, sag, and the Camir and Railway Carriers Act of the same session. The Cheep Trains Act, 1883, provides that targe not exceeding the rate of the penny per sails shall be extempt from duty, but fares for relian or periodical fictients shall be exempt from duty only where the ordinary fare for the single journey does not exceed that rate. Duty shall be payable at a reduced rate of a per cant, on fares exceeding the prior of one manny a mile. fares exceeding the rate of one panny a mile between stations within one urban district. Such district shall contain not less than one hundred thousand inhabitants, and must be of a continuous urban as distinguished from a rural or suburban character.

Officers or men in the military or police forces when travelling on public service, are charged three-fourths or one-half of ordinary passenger rates, according to number traveiling. does not extend to Ireland.

Hiring of Special Trains. — Although the majority of railway companies have no fixed charges for hir of special trains, the general charges are five shillings per infle, plus the ordinary fare for each passenger according to class of vehicle hired.

The Workmen's Compensation Act, 1897. - This Act, which received the Royal assent on Aug. 6, 1897, came into operation on July 1, 1898.

Government Control.—The following is an

extract of announcement issued from the War

Office, Aug. 4, rore;—
"An Order in Council has been made under Section 16 of the Regulation of the Forces Act 1871, declaring that it is expedient that the Government should have control over the rail-roads in Great Britain. This control will be exercised through an Executive Committee composed of general managers of railways which has been formed for some time and has prepared plaus with a view to facilitating the working of these provisions of the Act."

The Board of Trade issued the following

notice, dated September 15, 1914:—
"The Regulation of the Forces Act 2871, under which His Majesty's Government have taken possession of most of the railways of Great Britain, provides that full compensation shall be paid to the owners for any loss or injury they may have sustained thereby, the amount of such compensation to be settled by agreement.

or if necessary by arbitration.

"His Majesty's Government have agreed with the railway companies concerned that, subject to the undermentioned condition, the compensation to be paid them shall be the sum by which the aggregate net receipts of their railways for the period during which the Govern-ment are in possession of them fall short of the aggregate net receipts for the corresponding period of 1913. If, however, the net receipts of the companies for the first half of 1914 were less than the net receipts for the first half of 1913, the sum payable is to be reduced in the same the sum payable is to be reduced in the same proportion." [On April 14, 1915, the Board of Trade announced that an alteration had been made in this agreement by which the proportionate reduction in net receipts for the companies referred to will not in future be mad but as per cent. of the war bonus granted arilway employees who come within the Railway Conciliation Scheme shall be borne by the railway companies, and not by the Geregia-

mont.)
"This Sum, together with the net received of the railway companies taken over, is to be

distributed amongst those companies in propor-

observation amongst those companies in proposi-tion to the not received of each company during the period with which comparison is made.

!! The compensation to be paid under this arrangement will cover all-special services, such as those in connexion with hiditary and Naval transport rendered to the Government by the railway companies concerned, and it will therefore, be unnecessary to make any payments in respect of such transport on the railways taken

On behalf of the Government the control of the railwaysin Great Britain was vested as from August g. 1914 in a Committee composed of twelve General Managers of Railways. This Committee ceased to act as an Executive Comniitee on Sept. 25, 1925, but with the addition of four Railway Union representatives became the Railway Advisory Committee under the Ministry of Transport.

#### MINISTRY OF TRANSPORT BILL.

This Bill became operative on the agth of entenber, 1912. On that date there were transferred to the Ministry of Transport powers and duties, hitherto exercised by the Board of Trade in connexion with Rallways, two years being allowed under the Act for formulating a Transportation Policy. The Right Hon. Str Eric Geddes, M.P. is the Minister of Transport, and the Parliamentary Secretary Mr. Arthur Neal, M.P., the Railway Advisory Committee being composed as follows :-

Mr. C. Aldington, C.B.E., Gen. Manager, Great

Western Rly. Sir A. K. Butterworth, Gen. Manager, North Eastern Rly.

Mr. C. H. Dent, Gen. Manager, Great Northern

Rly.
\*Sir F. H. Dent, Gen. Manager, S.E & C Rly.
Manager, Great Central Rly. Sir W. Forbes, Gen. Manager, L.B. & S. Coast Rly.

Mr. D. A. Matheson, Gen. Manager, Calcdonian kly.

\*\* Sir Francis Dent retired from the position of Gen. Manager, S.E. & C. Rly., March 32, 2920.

Mr. F. Tatlow, C.B.E., Gen. Manager, Midland Bly. Sir H. W. Thornton, E.B.E., Gen. Manager,

Great Eastern Rly. Sir H. A. Walker, E.C.B., Gon. Manager, L. &

S. W. Rly. Major A. Watson, C.B.E., Gen. Manager, Fanc.

& Yerkshire Rly.
Sir Thomas Williams, Gen. Manager, L. & N.W. Rly.

Mr. J. Bromley, Gen. Sec. Associated Society of Loco. Engine Drivers and Firemen.

Mr. T. C. Cramp, President, National Union of Railwaymen.

Rt. Hon. J. H. Thomas, M.P., Gen. Sec. National Union of Railwaymen. Mr. G. A. Walkden, Gen. Sec. Rly. Clerks' Association.

RAILWAYS IN 1913, 1914, 1915, 1916, 1917, and 1918.

The number of persons employed in working the railways of the United Kingdom in 1914 was 643,135, and there were in use s4,818 locomotive engines, 79,339 coaching vehicles, 759,910 waguns for the conveyance of live stock, minerals, and general merchandise, and 49,609 service vehicles.

During the War 46e locomotives and 39,000 wagons, in addition to certain passenger stock, was sent to France, most of which have now

been returned.

Capital embarked in Railways. - The total Capital embarked in Railways.—The total amount of paid-up capital in the United Kingdom amounted on the sist December, 1918, to £1,356,102,000 (which includes £100,806,000 nominal capital caused by the consolidation or conversion of stocks). The £1,356,102,000 is composed of £49,4878,000 contiany, £356,502,000 preferential, and £124,349,000 guaranteed, £13,240,000 loans, and £352,000,000 debenture stock. The net receipts for the year amount to £53,952,000, equal to 3 99 per cent on the total capital sunk, as compared with £52,727,000 in 1917, with a corresponding capital of fi. 350, 34,000, which gave a net receipt of 3 '90 per cent. It may be seen, therefore, from the foregoing figures that the total amount

of capital raised at the close of the year was over £x.250.202,000, of which about £z,350,zoz,ece, of which about e, or approximately as per cent., was \$199,896,000, or approximately so per cent., was due to nominal additions. Of the total paid-up capital at the end of sps8, ordinary stock formed 37 o per cent., preferential and guaranteed 35 per cent., and loans and deben-ture stock ar per cent. The average rate of dividend on the ordinary capital was 3 70 per cent. in 1918, as compared with 3 37 per cent. in 1927. The average rate of dividend on the preferential capital rose from 3.6s per cent. in 1917 to 3.65 per cent. in 1918. These rates are naturally lower than they would have been had there been no nominal additions to the capital of the companies. The average rate of dividend or interest computed on the total capital, as it would have stood if no nominal additions had been made thereto, was 3'70 per cent., as compared with the rate of 3 57 per cent. paid on the total capital including nominal additions.

Gross Earnings of the Railways. - The earnings for the year 1918 amounted to £197,293,000, as compared with £168,721,000 for the year 1917, which gives an increase of £29,572,000, equal to

14 op per cent.
The passenger amounts for the year 1913 (the latest available figures) are as follows ---

The earnings for the conveyance of parcels, mails, and such other traffic as is generally mails, and such other traffic as is generally carried by passenger trains amounted in 1932 to £9,836,000, as compared with £10,005,835 in 1912, being a decrease of £10,835, or 17 per cent. The total figures of traffic falling under the heading of "goods" are £65,540,000, as compared with £64,005,814 in 1923—an increase of £2,597,126, or 370 per cent. The aggregate is made up of £25,000 from merchanding figures and £1,676,000 from live stock. The total quantity of goods carried in new sets. in 1913 was 568, sor, oco tons, as compared with 520,279,226 tons in 1922, showing an increase of 47,981,874 tons, or 8'4 per cent.

Expenditure.—The total working expenses of the whole of the railways for the year 1918 amounted to £143,342,000, equal to 79 per cent. of the gross earnings, as compared with a total of £125,994,000 for the year 1917, equal to 69 per cent. The increased working expenses of 1918 compared with 1917 amount to £27,348,000, or 19'08 per cent. The total number of miles travelled by passenger and goods trains during the year 1914 was 430,338,000, or 5,519,000 less than in 1913. The Coal and Coke carried by the various 1913. The Coal and Coke carried by the various systems of railways from colliery districts in the United Kingdom in 1916 and the previous year (the tomage represents, as far as possible, original traffic only—i.e., traffic received from collieries or places situated on the companies

own systems) :--1916 1917, tons. tons. England & Wales ... 171,990,59 165,860,935 29,368,122 Scotland ..... 38,058,687 Ireland ..... 24,958

Total U.K.... 204,068,286 195,254,015

Compensation.—The amount paid for compensation for personal injuries to passengers sustained during the year 1913 amounted to £166,796, and to workmen £398,473. In the movement of goods the companies have paid for damages and losses £740,309, as compared with £573,524 in 1912—an increase of £166,685.

BAILWAY ACCIDENTS DURING 1919.

The number of personal accidents on railways to passengers, railway servants, and others reported to the Board of Trada during the year ages show a total of spakilled and sp.pb; injured.

TABLE I.

	Killed.	Injured
A. Passengers— 2. From accidents to trains, rolling stock, permanent way, &c. 2. By other accidents in which the movement of	3	513
trains or railway vehicles	83	1,835
3. By accidents in which the movement of trains, &c., was not concerned +  B. Servants of Companies or Contractors*	18	495
z. From accidents to trains, rolling stock, permanent way, do	7	114
which the movement of trains, &c, was concerned 3. By accidents in which the	318	3,845
movement of trains, &c.,  z. was not concerned† C. Other Persons—	58	16,489
From accidents to trains, &c	8	30
ways at level crossings .	32	19
Trespassers (including suicides)	361	72
stations, &c., and other persons not included above	33	126
was not concerned.	_ #3 <sup>1</sup>	445
Total	938	23.083
		- J- J- J

\* Of contractors servants 5 were killed and 94 injured In 3 of the fatal and 83 of the non-fatal cases the move-

man of trains, &c. was not concerned

+ Of accidents in which the movement of trains and
railway vehicles was not concerned only the fatal cases
were required to be reported in the years 2916-17 and 2918

As regards the fatal cases shown in Table I. :--

patforms, do., in station limits, a were killed

and from other causes 3 were killed.

B. Servantz.—While dealing with the loading unloading, and movement of goods as were killed; while attending to engines at rest, a were killed; by falls on railway prunises as were killed; while working on the permanent way, s, were killed; and from other causes 6 were killed.

C. Other Persons.—Twenty-three persons other than passengers or servants were killed on railway premises, so of whom were killed while on business at stations or sidings. Of these cases a were due to the falling of goods, &c., from vehicles; 3 to persons falling off walls, &c.; r by coming in contact with electric rails when trespassing on the line; and 8 to other causes. III. Acadents caused by the Movement of

Trains and Railway Vehicles, exclusive of Train Accidents :-

A. Passengers.—Twenty-seven passengers were killed and 8xe injured by falling between trains and platforms, or on to platforms, ballast, &c, when attempting to enter or alight from trains; 9 were killed and a injured by falling off platforms and being struck or run over by trains; a were killed and sainjured when crossing lines at stations; as were killed and 76 injured by falling out of carriages during the running of trains; and se were killed and see injured from other causes. B. Sevents.—Seventy-two servants of the companies and of contractors were killed and

2,x57 injured by accidents occurring during shunting operations, of whom 29 were killed and 49s injured while coupling or uncoupling vehicles; while, apart from shunting operations, as were killed and 166 injured by falling off or when getting on or off trains, engines, vans, &c., in motion; a were killed and 40 injured by coming in contact with overbridges and erections at the sides of the lines; 4 were killed and 548 injured while attending to the machinery, &c., of engines in motion; 48 were killed and 73 injured while working on the permanent way, sidings, &c.; 220 were killed and 360 injured while walking or standing on the line on duty or when proceeding to or from work; and 60 were killed and 59s injured from other causes

Thirty-two persons were killed and re injured while passing over railways at level crossings; 18s were killed and 59 injured while trespassing on the lines, 179 committed suicide and 13 were injured while attempting suicide; and 33 were killed and 126 injured while on business at A. Passengers.—By falling on steps or from stations and sidings or in other circumstances,

TABLE II. The following Table gives the number of casualties in the various classes of train accidents:--

Class of Accident	Рисы	A cugers	Herv	B rants	Other	(' Persons.		otal Preons.
	Killed	Injured	Killed	lajured	Killed	Injured	Killed	Injured
A. Collision in which passen- ger trains were concerned B. Other collisions	<u>.</u> _	475	-	34 45	_	24	: 1	5#3 45
D. Other derailments  E. Accidents due to failure of engines or rolling stock	-	21 —	-	3 7 18	_		1 1	34 7 31
F. Other accidents	3	5×3	7	7 214	8	30	13	31 27

G. Other Persons.—Of these (excluding casualties due to accidents to trains), 456 were killed
and any injured; see Table I.

Inquiries.—During the year 1910, 325 inquiries
were held by the Assistant Inspecting Officer and
Nub-Suspecting Officers of Railways into accidents,
other than train accidents, that involved fatal or

ompanies to 372 persons, nearly all of whom
twee servants of the railway companies and persons at work or transacting business on the
companies premises of this number 372 inquiries
related to accidents to 332 servants of railway
companies due to the inovament of vehicles.

#### Indian Railways.

THE construction of Railways in India commenced in 1823, and the total length open on 31st March, 1928-19, was 35.526 miles. The following are the chief officials of the India Office (Railway Department. Whitehall, S.W.):—Secretary, Mr. W. Stantiall; Government Director of Indian Railway Companies, Mr. G. Deuchars; Consulting Engineers, Messus. Rendel, Palmer & Tratton. The Indian railways have in their service about 607,000 employees, of whom 6,000 are Europeans, 9,000 Angio-Indians, and 67s,000 Indians. The table on opposite page gives some of the main results for the past three years for Indian Railways as a whole, i.e., including branch lines promoted by companies, district board lines, Indian State lines, &c., as well as State Railways.

#### KINEMATOGRAHPY.

left kinematography during recent expenditure and trouble involves in such years, it is autonishing to reflect that a scheme. Tebusiness men, educationists, some of the earlier pioneers in the art ministers of the churches, social welfare of motion pictures put both projectors and films aside, after achieving a large measure of success, and allowed the discovery to lapse into temporary disuse because there seemed no commercial utility in the idea. Yet almost within the space of a generation motion photography, has become one of the most influential agencies in the world, and is moulding to an ever greater extent the thoughts and opinions of vast masses of people in every civilised country in the world.

From the zoetrope to modern kinematography is a very great stride in progress, but even to-day the moving picture, with its adjuncts of palatial buildings, elaborate equipment, skilled projection, costly accessories, and enormously expensive films, is only at the beginning of its career. Both from the aspects of efficiency and utility of this device we stand at the threshold of most promising developments Every week brings claims to improvements in apparatus, lighting, technique, and all the thousand and one factors that make for success. It is asserted in more than one quarter that the difficulty of colour in film projection has been solved. Numerous laboratories are working steadily towards non-inflammable film, and it is reported that some of them have attained their aim

With the coming of such improvements motion photography would immediately advance in a fachion calculated to reduce to insignificance even the astoundingly rapid progress already made. So far the main use of the film has been recreation, but there is an ever-increasing realisation of its value in commerce and instruction of all kinds. Practically all the film used to-day is highly inflammable. To safeguard the public properly it has been necessary to hedge round the use of films with restrictions that are rigidly enforced. Those who desire to use kine world and in the advancement of manmatography for non-theatrical purposes kind.

Mace of the wonderful developments | are therefore frequently ninderes by the workers, and similar potential users of the film in fields other than recreation, the advent of efficient portable machines offers great possibilities. If, as we are led to expect, non-indammable film and daylight screens are almost an accomplished fact, there will be no bounds to the usefulness of the moving picture and to its sphere of action in the near future. Already many commercial houses, churches, and schools are employing films; many others are endeavouring to acquire the necessary equipment and film service, or are earnestly enquiring as to the possibilities which this innovation holds for them; mobile units capable of generating the necessary power and light are travelling round the country for various specific commercial and welfare purposes, and there is no room for doubt that within the next few years kinematography will become one of the greatest forces for non-recreative as well as for recreative ends.

For commercial ends the utility of the film can hardly be over-estimated. The device is already being widely used as a medium for demonstrating the soundness of business methods and the excellence of manufactured goods. By the same means employees are being interested in their work and taught how to achieve better results. In scientific research. practical engineering, agriculture, and other industrial fields, motion photography is playing an important part, and has proved itself of the utmost service. It is a matter for regret that America and Germany-to quote but two cases—are credibly reported to be far ahead of our own country in this direction, and it is strongly to be hoped that British enterprise will not stint the due thought and attention which this subject demands, and will take steps to prevent us from lagging behind our competitors in the markets of the

#### MARINE INSURANCE.

Community interested in Shipping met at a small Confee-House keet by a man of the name of Edward Lloyd, first of all in Tower Street and, after 1691, at the sorner of Abcharch Lane and Lombard Street, in the City of London. The name of this Coffee-House keeper has come down from generation to generation in connection with the greatest Shipping and Marine Insurance transactions of the World.

Before his time Marine Insurance appears to have been conducted in England by the Lomberds, who came from Italy and gave their name to Lombard Street, but from the time that Lloyd established his Coffee-House, where Seafaring men joetled against Merchants, Britons conducted Marine Insurance in England.

There is still preserved at Lloyd's a Policy of Marine Insurance dated January 20th, 1680, upon the Good Ship called the "Golden Fleece," of 250 Tons (Gasper Hicks, Master), for a voyage from Lisbon to Venice, at the rate of Four P unds per cent.

Edward Lloyd, a man of wisdom and enterprise, was the founder of that great system of Commercial and Maritime Intelligence which has ever since been

carried on by Lloyd's.

In 1696 he started a Newspaper, which gave a List of Ships whose arrivals and sailings had been reported. That Newspaper, which he called "Lloyd's List," succeeded admirably for a short time, but criticism was not much tolerated in those days, and Edward Lloyd ventured to write an Article which called in question the action of the House of Lords with regard to Silks. The House of Lords apparently resented this; they immediately censured Edward Lloyd, and suppressed his Newspaper, and it was not till 30 years later that he was allowed to re-establish it. Since that date "Lloyd's List" has appeared regularly, and is still printed and published as a daily Shipping and Commercial Newspaper at Lloyd's, Royal Exchange, in the City of London.

The frequenters of Lloyd's Coffee-House were not permitted to enjoy for long the monopoly of Marine Insurance, and in the year 1720 Parliament allowed two Marine Insurance Companies to be established in London. These Companies, The Royal Exchange Assurance Corporation and the London Assurance Corporation.

poration, are continuing business at the present day.

In the year 1770 those frequenters of Lloyd's Coffee-House whose particular business was Marine Insurance, formed themselves into an alliance, and moved to Pope's Head Alley, taking with them "Lloyd's List." In 1774 they removed to the Royal Exchange, where the Corporation of Lloyd's is still established, and in the same year the Underwriters of Lloyd's found it necessary to have complete information with regard to the construction and condition of the Ships which they insured, and they accordingly established a Register of Shipping. This undertaking grew and prospered, and is still carried on by "Lloyd's Register of Shipping" at 71, Fezchurch Street, E.C. 8.

In 1808 the Members of Lloyd's started a Fund for the benefit of sufferers by the War between this Country and Napoleon. This Fund, called "Lloyd's Patriotic Fund," eventually reached a sum of over £888,000, and has rendered much help to the relatives of Sailors and Soldiers who have fought in our Wars from 1808 down to the present day. In 1915 the Members of Lloyd's subscribed over £115,000 for a similar object in connection with the recent Great War, and this sum is administered by the Committee of Lloyd's Patriotic Fund.

Several other funds have been raised at Lloyd's in connection with the Great War, amounting in the aggregate to over £600,000, of which £173,000 was subscribed in response to Earl Haig's appeal on behalf of the Officers' Association.

In the year 1810 a select Parliamentary Committee was appointed to enquire into the monopoly of Marine Insurance, which was held by Lloyd's and the two Marine Insurance Companies referred to above. The Committee recommended that the monopoly should be abelished, but the House of Commons decided that Lloyd's had rendered a great service to the Country, through the long years

of War with France by supplying the Government with information in regard to maritime matters and, together with the Marine Interest Companies, by insuring the arrival in this Country of Merchant Ships and their valuable cargoes. The House, therefore, resolved that no alteration should be made, but ten years later. in 1820, an Act was passed by which Marine Insurance in this Country was thrown open, and since that date many other Marine Insurance Companies have beer established, and these Companies together with Lloyd's form the Marine Insurance Market of London.

The Marine Insurance Companies, although competitors with the Underwriters at Lloyd's for Insurance business, are yet supporters of the Corporation of Lloyd's and its system of collecting Maritime Intelligence from and diffusing it to all

parts of the World.

The Royal Exchange was destroyed by fire on the 10th January, 1838, and by this unfortunate circumstance most of the important records of Lloyd's were It was to the Rooms at present occupied by Lloyd's that Queen Victoria came when she opened the new Royal Exchange in 1844.

Lloyd's was incorporated in 1871 under Lloyd's Act of that year, having previously existed for about 200 years as an unincorporated Society of Underwriters, which had since 1811 been regulated by a Deed of Association and by

rules from time to time made under that Deed.

This Act was amended by Lloyd's Act, 1911, under which the objects of the

Society were extended to meet the requirements of modern developments.

The Committee of Lloyd's, as a body, is only interested in the Insurance Business carried on at Lloyd's to the same extent that the Committee of the Stock Exchange is interested in the Business carried on by its Members, namely, the laying down of regulations to safeguard the interests of Members as well as those of Policy holders.

The work of Lloyd's, as a Corporation, is to protect the interests of Members of the Society in respect of Shipping, Cargoes, Freights and other Insurance business, and for this purpose it is necessary to obtain early information of the movements of British and Foreign Mercantile Shipping and to be in touch with

every Port in the World

The Corporation of Lloyd's has therefore established Signal Stations and Wireless Stations at many important points on the Coasts of the United Kingdom and Abroad, and there is a Lloyd's Agent, or Sub-Agent, at every Port in the World.

Lloyd's Signal and Wireless Stations have proved themselves very valuable not only to Underwriters but also to Shipowners and Merchants, as, besides getting news of a vessel, it is frequently necessary that she should be intercepted off the Coast,

either in Home or in distant Waters, and ordered to a new destination.

Marine Insurance business has always been the principal business at Lloyd's, but for some years past a very considerable Insurance business for War Risks, Fire, Aircraft, Accident, Employers' Liability, Jewellery, Motor Cars, Burglary,

etc., etc., has been transacted by Members of Lloyd's.

All Underwriting Members of Lloyd's deposit with the Committee of Lloyd's Securities and Guarantees in proportion to the amount of business that they transact, and all Underwriters' accounts are audited annually by approved Auditors, who report the result of these Audits to the Committee of Lloyd's, In addition to this, the personal Liability of all Underwriters is unlimited, and the security of a Lloyd's Policy is, therefore, fully safeguarded.

To effect an Insurance at Lloyd's, it is necessary to employ the services of an Insurance Broker, who must be either a Member of, or a Subscriber to, Lloyd's.

#### LLOYD'S.

#### ROYAL EXCHANGE. LONDON. E.C. 3.

Members of Lloyd's do not advertise, but a list of Lloyd's Insurance Brokers, with heir addresses, will be forwarded on application to the Secretary of Lloyd's Royal Exchange, London, E.C.3.

#### BRITISH SHIPOWNING

#### Moping World." By the Editor, and

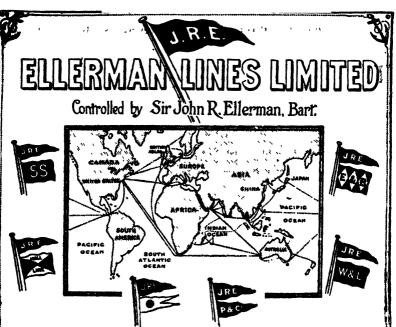

HROUGHOU 1 1920 the shipping industry of the couptry was exposed to a succession of influences, partly political but more largely economic in their As in the case of other origin and effect key industries, the "turn over" in shipping from war to peace conditions, from State control and management to individual responsibility and initiative, with its attendant risks and no State indemnity to fall back The return to upon, has not been casy. economic conditions meant that shipping companies founded to reap the artificial profits of war time had to prove their inancial stability in normal times, or go under. Probably in the end, after the final "shake out," shipowning interests will be less liable than of late to financial speculation and fluctuation, stronger and healthier, better able to meet trade depression and to survive it. But meanwhile the position is not a particularly comfortable one for the shipowner aither here or abroad.

In August last the war expedient of the Government control of shipping virtually came to an end, and although the Shipping Controller claims still to exercise a nominal right to direct voyages and limit freights. these powers are only retained so that they may be put in force should a critical financial or political situation again arise. This is not, of course, anticipated, so for all practical purposes State control of the industry is Unfortunately, while coal exports remain subject to Departmental restrictions. the freedom of shipping cannot be said to be complete, and the natural laws of supply and demand cannot operate if the staple export of the country is prohibited and imports have to pay for the round voyage when the vessel goes out in ballast.

Nevertheless, there is no British shipowner who does not appreciate the benefits of being allowed to manage his own business in his own way. He is convinced that he can do it better than any outside agency; and he is right. Freights may fall, running costs may remain extravagantly high, and labour prove refractory; yet the shipowner, although he may growl, remains in business, and all that he asks is to be left alone to meet the strong international competition which looms up in the West and from the Far East. Before the War the competition of the German merchant marine on the high seas was severe and not

tion which threatens from America is more straightforward, but there, again, no attempt is made to disguise the fact that the Government is being evoked to render aid to its own nationals. The attempt to revive the tenyear-old controversy of giving a preference to American ships using the Panama Canal in the payment of dues is one instance; the passing of the Jones Shipping Act by the United States Congress is another example of political action directed to economic ends. In Japan, too, the same tendency is to be observed, and from that country it is possible British shipowning may yet experience the most serious competition. But, in spite of it all, the Britisher is confident he can meet any of his oversea competitors in fair fight, ! North of England shipowners belonging to a generation that is passing may sell their fleets to younger men on the Bristol Channel and elsewhere; but even the veterans cannot rest on their oars, and Sir Walter Runciman, among others, takes up the burden of business again and is convinced he can make good.

This faith in the future is all the more remarkable in view of the steady fall in freight quotations which set in during the early summer and deepened with the autumn months, even although they revived temporarily under the menace of a national coal strike. The truth is that there are now more ships affoat than ever before in the history of the world. There is less cargo for them to carry nowadays; an impoverished Europe has little to export, and cannot afford to pay much for anything in the shape of imports other than the most urgent necessaries of life. On the other hand, ships have to make long voyages instead of short, and hence more tonnage is required to carry the same quantity of goods, while delays and expenses in port contribute still further to the abnormal conditions of seaborne trade. Railways rates have advanced, and coastwise shipping benefits. But the restrictions on coal exports sent abroad, and the high level of prices of that commedity, have diverted coal-carrying tonnage into other routes, and given a great fillip to the construction of, and demand for, oil tankers. The unsettled conditions generally have alarmed the weaker shipping companies and have correspondingly strengthened the regular liner firms, whose pre-war tonnage, written down to a low figure, is now a valuable asset in face of always fair and above board. The competi- the high costs of new construction.

HE carrying capacity of the Steamers owned and controlled by Sir John Ellerman, B. rt., throughout the world is now over 1,150,000 tons deadweight, and additional steamers, with an approximate capacity of 300,000 tons, are in course of construction. Powerful and Luxurious Passenger Steamers to suit the various trades are a special feature.

Principal Offices: LONDON, LIVERPOOL, HULL, GLASGOW. Agencies throughout the World.

HE ship-repairing industry is complementary to that of shipowning. For the successful operation of the latter it is sasential that there should be adequate facilities for the repairs of hulls and engines and for the general overhaul of ships' equipment. Serious aepairs are usually dry-dock jobs and hence no sup-to-date port is without its public or private dry docks. Liverpool and Southampton are the only United Kingdom ports where such ships us the squitania, Imperator, and Olympic can he drydocked, and hence they must go there for painting or for hull or propeller repairs. The Clyde, Tyne, Wear, Toes, Humber, the Bristol Channel at Cardiff, Barry, Newport and Bristol and the Thames have splendid facilities for repairs to all but the very largest type of vessel. British ship-repairing works are in great demand, not only by British shipowners, but also for foreign shipping. Great Britain is, in fact, the World's centre of ship-repairing, and there is no reason why its activities should not be appreciably extended. The industry can hardly hope to attain the enermous output of the later period of the war and that following the armistice. Between the middle of June, 1917, and the cossation of hostilities, no fewer than 10,000 British ships, aggregating over 30,000,000 tons, passed through the repairers' hands at our home ports, while in addition hundreds of Allied and Neutral vessels were also dealt with. During 1919 and 1920 work was also very brisk chiefly because the ships released from Admiralty control had to be reconditioned before being returned to their owners. This type of work insted well into 1920, and in addition to the demands which it made upon the ship-repairers there was a large volume of work in connection with the adaptation of steamships to burn liquid fuel instead of coal. The two biggest jobs of this description were those of the Aquitania and the Olympic, the conversion of the latter it is stated having cost over £400,000. Hundreds of other vessels wer- also converted and there is yet much work of this description waiting its turn. The outlook for 1921 is therefore distinctly encouraging for, healdes adapting furnaces for , and bunkers for carrying off, there is in addition to casualty and depreciation repairs, a vast amount of work overdue upon hundreds of ships. These, when the shortage of tonnage was acute, could not be withdrawn from active There is, however, a problematical factor which may affect the industry wary dis-astrously. In the latter portion of the year there were several strikes which seriously hampered the work of the repairers, and incon-

venienced shipowners to such an extent that; they were compelled to send their vessels to Antwerp, Rotterdam, and even Bremen and Hamburg to be repaired. At these ports the work, which cost less, was well done, and time; contracts were faithfully fulfilled In shiprepairing the time factor is of vital importance. as while the ship is in the repairers' hands she, is earning neither freight nor passage money. Labour has it in its power to make or mar the British ship-repairing industry, and it cannot be too plainly recognised that the insert of the calling a strike whenever any dispute arises, can only result in driving repair work to Continental The work of ship-repairing is competitors. closely allied with that of shipbuilding. In fact, the modern plants, with the exception of launching ways and extensive plating sheds, do not greatly differ from a shipbuilding and marine engineering works. They must be selfcontained and hence able at a moment's notice to tackle repairs either to hull or machinery As might be expected, many shipbuilders make a feature of repair work. A notable case in point is furnished by Messrs Harland & Wolff, who have established magnificent repairing; establishments at Liverpool, Southampton, and more recently on the Thanies. These are a great boon to shipowners, as they enable their vessels to be overhauled expeditiously at their terminal, ports. The entrance of a firm which has built so many of the largest vessels of the British mercantile marine into the ship-repairing business, is advantageous in another direction. As builders they have special knowledge of the detailed construction of hull, machinery, and passenger accommodation of many of the vessels which come into their hands for repair or overhaul As illustrative of the equipment necessary for the modern ship-repairing plant dealing with the largest jobs, it may be mentioned that 60 and 50 ton cranes, lathes that will deal with 56 feet length and 11 feet diameter shaftings, and rolls capable of manipulating plates up to 35 feet in width are all to be found in the Harland & Wolff establishments at Liverpool and Southampton. The suits of the said pepair work done at British ports is, however to cargo boats, and in this phase of the industry the Bristol Channel and the Tyne have established a world-wide reputation. To sum up the situation : the outlook is very hopeful : there is more than a normal amount of work, and the industry should flourish accordingly-provided that high "Costs and harassing strikes no not drive the trade away to cheaper and more reliable

#### OIL FUEL

mit n HE m paring engineering during the past year has been the substitution of oil fuel for coal. This has been done either by use in internal combustion engines or by burning oil in place of coal to raise steam. The advance in the use of the internal combusion engine has been very marked, but, for reasons which are not difficult to understand, has been far exceeded by the conversion of the ordinary steam engines to burn oil fuel. Those reasons, briefly, are, that although the design of internal combustion engines has made marked progress during and since the war it has not yet advanced to the point where such engines can be employed for passenger liner traffic. That will some in them, but not for a few yells, traffic. That will o because not only is the question of our ine design involved, but also that of hull design. The fast motor driven massenger liner will be not only a revolution in marine engineering but also in hull design and construction. Nevertheless the use of the internal combustion engine has made substantial progress, for it has proved itself to be economic in upkeep, reliable in operation, and profitable in carning capacity. These advantages, which become more and more important as the unsatisfactory labour conditions throughout the world tend to become stabilised, far outweigh the greater prime cost of the internal combustion engine and compensate for the loss of greater flexibility of steam power. Mr. James Richardson, B.Sc., in a paper read last October before the Institute of Marine Engineers, shows that if the opera tion costs of a twin screw Diesel engine (2,400 bhp) ressel are compared with those of single screw double reduction geared turbine steamers (2,400 s h p ) it will be found that the turbine steamer burning coal will cost in ongine room charges alone £13,850 per annum, and if barning oil 433,390 per annum more than the motorship, without making any allowance for the increased carrying capacity of the motorship. The advance in motorship tonnage building to day is therefore comprehensible. At September 30 the total of such tonnage was 1,263,000 tons deadweight, having an aggregate b lap. of 405,000. Every month brings additional evidence of the great part the marine internal combustion engine is to play during the next decade in ocean transport.

The consumption of oil in internal combustion engines 😩 of course the ideal method, but for technical reasons this is not always possible, and it is necessary to burn the oil in the furnaces Strictly speaking this is not an economical procedure, because the volume of oil required to raise steam in boilers is just about double the amount of oil required to develop the same horse nower by internal combustion engines. The annual report of Lloyd's Register issued in September drew attention to this development, and stated that there were 426 vessels of 1,995,788 gross tons classed in the Register Book as oil burners. The percentage of such vessels to the total in the book was 16 3 per cent. as compared with 10'5 per cent. in the 1919 Register Book. The percentage of motorships rose in the same period from 1 5 per cent, to 1.7 per cent.

The reasons for burning oil fuel, even under boilers, are economy of operation because of smaller engine room staff, quicker and cleaner bunkering, cartainty of supplies and lower or at least not higher cost than coal. The difficulty in regard to oil fuel is supply. "The country which controls the petroleum supply will control the trade of the world," said the Chairman of

meworthy development in connection San Francisco hat April The British were the that to recognize that further during the past year has initiative British enterprise has opened up and is developing oil fields in Mexico, Central America, Trinidad. Veneraela, India, Egypt, Burma, the Straits Settlements, the F M S., in Roumania, in Russia, in North and South Persia and in Mesopotamia. Just as our home coal gave us commercial power, so coal's new rival, oil, will maintain that power. We still need our coaling stations, and in addition we are laying down oil bunkering depôts all over the world. The bunker holds of our liners are being converted into oil tanks, and two of the most striking conversions during the past year were those of the famous Atlantic liners Agustania and Olympic from burning coal to firing with oil fuel. In the case of the Aguitania the work of conversion was particularly heavy, for the coal bunkers not being suitable for cargo purposes, it was decided not to carry the oil in the double bottom but to rebuild the bunkers as tanks, a matter entailing large expenditure of money and time. The fuel is sprayed into the furnices by the "White" low pressure system There is a duplicate installation for each group of three boilers, which ensures that the feed to the furnaces can only be interfered with in the most exceptional circumstances. The oil is carried in bunker tanks, cross bunker tanks and double bottom tanks, and to ensure free flow in cold weather heating coils are installed. From the storage tanks the oil is pumped to settling tanks, and thence through suction strainers to the heaters and discharge filters, and so to the burners It will be seen that whatever economies oil fuel may bring in operating vessels, the capital expenditure involved in such alterations and installations as we have merely aketched must be very large. The conversion of a passenger liner to oil fuel means also a great deal of extraneous work in connection with additional fire prevention, and to so perfect a state has this arrived that there is not a case on record of such a converted vessel having had a fire on board Indeed, if proper precautions are taken, oil burners are safer than coal burners, because there is no risk of combustion in the bunkers. The result of the conversions on the Aquitania was that the engine room staff was reduced by (6 per cent.; better speed has been maintuined in service, because it is no longer necessary to draw fires to clean out furnaces, thereby an even steam pressure has been maintained from start to finish of the voyage; bunkering takes twenty-four hours for the round trip, instead of five days at each terminal. The Cunard's Aquitania and the White Star's Olympic are not the only famous hners converted during the past year. The Royal Mail have converted the Arlanza and Aimanzora. and with the associated company, the Pacific Steam Navigation, will eventually convert all their South American liners to sil fuel. The P. and P. have adopted a similar policy and are also building motorships. The Bibby Line already has a motor liner in service, whilst Mesers Harland & Wolff are building a fleet of motorships for the Glen Line, amongst them being the Glenogle. Glenger and others, which rank among the largest and most powerful motor vessels in the world. Side by side with these developments British oil interests are expanding the output by repiping old and opening up new fields. They are laying down tank depôts in all parts of the Empire and elsewhere, and through their sub. sidiaries creating large fleets of tankers to carry the oil Standard Qii at the U.S. Foreign Trade Convention at | to their bunkering depits at home and abroad.

#### THE BOILER INDUSTRY. By THOMAS WALLEY.

SINCH the early days of steams which Emerson (pinched; all plate edges to be planed or sawn said mightalianot by termed an inglishman) (freat lightain has annually exported a conjugate to be stated by the state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a state of a stat tained, and a short survey of the present organisation, conditions and practice of the industry

may be useful in assessing future prospects.

The boiler industry is carried on, broadly The flotter industry is carried to be product of the manufacturing firm, but are made as an item is a complete usit; thus quarried the large shipbuilding yards have boiler shaps of the large shipbuilding yards have boiler shaps of their own, railway companies generally produce the bollers for their locomotives, as also do makers of agricultural engines, road-rollers, and the like. This system shows signs of being dis-placed by the accord one in which a firm manufactures boilers and nothing else—in other words, by the modern system of specialisation. A tendency of this kind is all to the good. Modern boilermakers use a much larger proportion of heavy plant than their predecessors, such as hydraulic flanging presses, multiple drills, hydraulic riveters, and it is only a firm able to keep such machines busy by a large turnover that can produce good boilers at a reasonable price. The use of powerful and efficient plant naturally results in a better article with lower manufacturing costs than older methods could, as these involve so much hand work. This is true of most trades, but applies with special force in boilermaking, where, for instance, the use of a flanging press avoids the frequent reheating of heavy plates, which is necessary with hand flanging. But this specialisation goes further. Boilermakers nowadays do not make all types of boiler ; as a matter of fact, most of the firms of the front rank confine themselves to the manufacture of one, or at most two types. Thus the makers of one, or at most two types. water-tube boilers (in which the fire is outside the water and needs a firebrick-lined casing to contain it and form the furnace) are almost a race apart from the makers of fire-tube boilers (in which the fire is contained inside the waterholding structure). The latter class, again, handle only say, "Scotch" or "Laucashire," "Yorkshire," "Cornish" or "Locomotive" "Yorkshire," "Cornish" or "Locomotive" boilers, which are all horizontal, or else one of the vertical types. These last, apart from the common "Crosstube" boiler, are generally patented patterns, and further illustrate special-isation. The natural result of specialisation is standardisation, which again helps to make possible a better article at a moderate price. Most of the firms which have adopted the one have adopted the other, greatly to the benefit of the buyer, as he can select a firm whose range of standard sizes, singly or in groups, covers his re-quirements with, very often, a possibility of getting what he wants from stock, though the whole trade has suffered hadly for the last year or so from the extreme s'ortage of raw material, viz. plates and tubes, which makes for longer deliveries. It may be noted here that specialisation does not mean monopoly; there is smiclent competition amongst bollarmakers to keep the trade healthy whilst there sagemenally a refresh-ing absence of "rings" or combinations. The best modern practice, it may be noted for

the benefit of the non-technical buyer, requires undoubtedly the all the rivet holes to be drilled in place, not will be British.

structure and interfere with proper cleaning, their absence being compensated for by pressing the plates affected into stronger forms. Steel is now almost invariably used, except sometimes for tubes, and the employment of steel of very high tanaile strength is becoming more frequent where weight is a prime consideration, e.g. in Naval. work. Welding by the oxy-neetylene fame or by electricity in place of riveting seams is making headway. There is also a tendency to build boilers for higher pressures than formerly.

More scientific design has resulted in economy of material, and standardisation in economy of time and labour. Economy in performance is now being carefully studied. The increasing cost and scarcity of steam coal involves the use of inferior fuels, which to be consumed effectively require special forms of grate. These are being developed, and material formerly classed as waste can quite easily be burned on them. The superheater is being further developed also in the direction of economy. Though the use of heavy off as fuel is not at present a commercial pro-position in Greab Britain, owing to its high cost, it has great advantages, and many bolishmakers have studied the subject sufficiently well to be able to modify their designs so as to burn it effectively.

A welcome note in progress was sounded in the A welcome note in progress was sounded in the autumn of 1919 by the publication of a uniform set of rules for boiler construction. This is the production of the big Marine Surveys, viz. Board of Trade, Lloyd's, British Corporation and Bureau Vertuss. It will further almostly and standardise business, and possibly ised foregulations for land boilers, for nothing of the kind exists in Great Britain. The intending Survey of a land boiler than is well defined to exercise the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the se fy and

exists in Great Britain. The intending buyer of a land boiler, then, is well advised to enquire to what rules his boiler will be constructed.

The future of the industry is not so gloomy as some prophets predict. It is quite true, that the Diesel sangine is apparently driving stemm beliers out of large ships—the main boilers that is—for even on Diesel-sngined vessells it is found necessary to carry an auxiliary (or donkey) boiler to provide the motive power for such inachinery as winches and steering-gear and heat for various purposes. It is further possible that the use of the large internal-combustion engine may become more general on land and stock make as the power facuse, and that water power and tidal action may be more utilised; but diems as screely an industry which does not make use of steem for other purposes than power, and how processes and extensions are occurring from day to day. and extensions are occurring from day to day. The utilisation of waste heat from steel-heating furnaces by means of boilers is an illustration. The steam boiler and engine still remain the best independent source of power, and it is this very independence which makes a steam installation the most reliable and flexible power producer in isolated situations and developing countries. There will be numbers of oil-fired steam boilers

in Mesopotamia and South America in the future, wood-fired in Siberia and Canada, to suggest only a few possibilities, and, as British boliers are undoubtedly the best, the larger portion of them

EGETABLE oils have always been of enermous value to the human race, used as foods and for medicinal, lighting, lubii cating, and a gratipunited of ther pripose. More recently as entirely new field has been opened for the me of symposic particles are required for this me of symposic particles required for this purpose are smally increasing; under an entirely advance has been made

during the past fru years.
The origin of the oi -milling industry would be difficult indeed to place. By more or less crude methods, with untive-made inefficient plant, oils have been obtained from oil-bearing seeds, one might say, since the world began. It is not proposed here to deal with that part of the subject, but to refer briefly to the methods and processes

in use to-day.

Until recent years, nearly all vegetable oils were expressed, that is, the seed after suitable preparation was submitted to pressure and th forced out. To-day, an alternative method in the extraction of oils by means of chemical solvents is firmly established and in general use.

Concerning plant for expressing oils from seeds there are different types of presses in use. That which has been most favoured in this country is the Anglo-American system, probably on account of the fact that previous to the War the seeds chiefly treated here were cotton-seed, linesed, and soya beans, which lend themselves more readily to treatment by this system. A standard unit of Anglo-American machinery usually comprises the following :-

A magnetic separator to remove any ison from the seed.

A screen to take out the dirt and foreign matter.

A set of rollers to grind the seed.

A cooking kettle to heat and temper the seed, A moulding machine, which takes the heated meal from the Lettle and moulds it to

cake shape for the press.

Four hydraulic open plate presses, each capable of taking sixteen charges of meal from the moulding machine; these are enclosed in presscloth, which retains the solid material and allows the oil to escape.

A paring machine, which removes the oily edges from the cakes as taken from the

A set of edge runner stones, to grind the parings from the paring machine, these parings being returned to the kettle and mixed with the new seed from the rolls.

A set of hydrau'ic pumps, with the necessary valves for operating the presses.

It addition, elsaftors and conveyors are supplied for taking the seed from one part of the plant to another, to that the whole works almost automatically. The cakes from the presses are

chiefly used as cattle food.

Another type of press of which there are at least forated 'ox' press of which there are at least two distinct types. Is what is known as the "tramway system" the extracting boxes of the presses are removable-whereas in the other; the

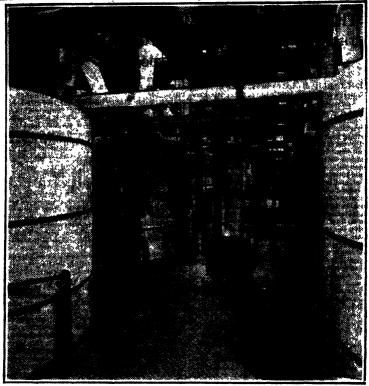

extracting boxes are fixed. Trible extracting boxes are usually built up of a number thin staves, each stave having one serrated edge, thus forming a bex, with innumerable fine perforations, knough which the oil escapes under pressure. Another type of box has a number of time holes drilled through its walls for the same purpose. In the tramway system, the hoxes are filled with seed, which is then compressed in a preliminary packing press; more seed is placed in the box, and it is again comseen is piaced in the box, and it is again com-pressed. The boxes are then taken on a truck to a finishing press, where the oil is expressed. After the sted has been under pressure in the finishing pieces a given time, the box is taken away to the preliminary press, where the cakes are ejected and the box realised. Preparatory cleaning, grinding and cooking plant is of course required with these measure; this heing subrequired with these presses; this being sub-stantially the same of for the Angle-American system. Stationary cage presses are now being

system. Scatchary cage presses are now being made combined with preliminary packing presses, and automatic sading arrangements.

"Cage" grands again and presenting of oil, such as paim terribal, copra, ground naire, baston seed, shea, mowrat, etc. If high-these solible or control of the such as paim terribal, copra, ground naire, baston seed, shea, mowrat, etc. If high-these solible or such as pain terrish, opera, ground sais, basto' seed, shea, nowast, etc. If high that said bit or medicinal oils are required, the "cage" presses are generally employed, but the material is treated cold in the presses, he hast being applied to the seed, and this results is to better quality of oil being produced, known as cold-drawn oil. After cold pressuits, there is suff a semiderable percentage of officinating in the seed, so that the cakes are ground up again, and may be pressed again bet, or, better still pageted by the solvent extraction process, by which practically all the oil remaining can be extracted.

The solvent extraction process is suitable for

The solvent extraction process is suitable for treating practically all kinds of seeds, with either a high or low oil content. This process is distinutly useful when the maximum extraction of oil is retained or when the residue is not required in the form of takes for cettle feeding purposes. These plants are extremely useful recovering the balance of the oil from materials which have been once pressed, such as castor seed, which has been pressed cold to obtain pha amountical clis. The products of the solvent extraction process are oil and meal, the latter being sold as a stattle food, or as a ferti-iser, according to the seed being treated. At one time there was a strong prejudice against extracted oils and meals, but that is rapidly dying out. Oil refining processes have been greatly improved, and the oil from solvent extraction plants can readily be used for edilige purposes. The selvent used chiefly in this process is bankine. Othersolvents may however, be used, such "as trichlore bylene, carbon tetrachloride, carbon disulphide, etc. There are a number of solvent estraction plants already at work in the United Kingdom, of varying capacities dealing with 200 to 2,000 tons of seed per week. As dil manufacturers realise the great possibilities of the solvent process many more plants will be erected.

tion of perishable feed stuffs under cold storage. sion of persuable reon-sums under com storage, has come to be regarded as the one outstanding, rational and practical means by which the continuation of the prevailing food shortage and consequent almost pro-hibitive cost of living can be swetch. In all countries where population continues so rapidly anythous internal feathwardstept, anasolar it, duity

In all countries where population continues so rapidly to outgrow internal feet producing capacity, it daily becomes more and song 'daily species for draw upon the food resources of after resident countries for support, and so this section is a second producing countries for support, and so this section is assumed to transport and distribution, by means of inspiration infragrantion, the very national arisement sections of the second countries for motional arisement sections.

upon this measure the superfection of food appare from the superfective realised by those who are unacquainties, with the immunerable contact points of refrigeration, with industrial and social points of refrigeration, with industrial and social

points of refriguestes, with industrial and social seconomics, as a waste growning and bygienes promoter, how greatly health, harginess, industrial prosperity and social well-being are dispendent upon it.

Its scientific developments and practical application to commerce has hitheren per left entirely to private ent-prise and indicative, in which the Cold Storage and loc Association sink olders institution of its kind in the world) has gained as important peri. Recognizing the vital necessity of another indication of many of the world's most important health of many of the world's most important hadistries and rendering possible innumerable manufacturing processes entracing the essential factors in the progress of human civilisation innumerator anamas and the case of human civilisa-tion, the British Soverament during the war instituted, under the Ministry of Food, a Cold Storage Department, with authority to organise, finance, and facilitate additional cold storage accommodation throughout the United Kingdom and generally encourage scientific research and practical development of the industry

Briefly described in non-technical terms, refrigeration or the mechanical production of cold—is the process by which the temperature of any body may be reduced and maintained at a lower temperature than that of the surrounding atmosphere, and this process involves the continuous abstraction of heat from the body being cooled, and the transference of that heat to some other body (such as and generally water) at normal

The theory and practice of machinery used for carrying out this process are based upon the first and second laws of thermodynamics, namely-

(i) The equivalence and mutual convertibility of heat

and mechanical energy, and (3) The mecessity of an external agent for the transference of heat from one budy to another at a relatively

higher temperature. nigner conference.

In the entry blouver days of refrigeration, machines of
the collect type embloring atmospheric gir as than
frigerating medium grow under the simple this program
and founds will-spread commercial application up til about the year 1820, whon scientists and engineers commenced experimenting with stother system of retrigoration known as the compression at stom, which has since been universally adopted, entirely superseding the earlier cold-air system.

In the compression system a volatile liquid such as ammonia (N H 3), or carson stoude 10.0.3, is used as

MECHANICAL Refrigeration, particularly in its the refrigerating medium, the underlying principle being application to the punkersides and comported the physical property, which is possessed more or less by all substances, of absorbing latent heat at constant temperature while passing from the liquid to the ous state and of rejecting the same quantity of heat while undergoing the reverse process of condensation. This is the principle which is made use of in all modern refrigerating machinery of the compression type for the mechanical production of cold.

In practical application the ammonia or other refristating medium is caused to evaporate and absorb latent heat in tubular coils, around the exterior of which the air of the storage chamber, or water to be frozen into ice, or whatever other substance is to be cooled, is allowed to circulate, while the resulting vapour is drawn off by a compression pump, and discharged into a condenser, where it is cooled by circulating water to which it rejects the latent heat and is restored to the liquid state to be used over again in the evaporator coffs.

One of the chief, though by no means most important, industrial applications of mechanical refrigeration as the manufacture of los, more durable, and-by reason of the known purity of the water congesied more hygienic and palatable than the natural product. The magnitude and passesses tone manner pressure. The integratual of this influstry may be singued by the annial consumption of manufactured ion in the United States, which amounts to ver 23-96200 tone, was been thinky 1,000 odd ico-making plants higher conjugated in the ministracture. In Great hiridath, where, climatic conditions are less favourable to the lost facilities, x, janual consumption

feverirable to the spi fadustry, an annual consumption of ever supple same in resourced.

Another application of more vital importance to this country is the coding of cold stilling chambers for the preservation of most, poultry, sink, suith, butter, cheese, fruit, regetables and other provisions of a perishable nature

Including the new cold stores erected under Govern ment control during the war, and in addition to several thousand privately caused small cold stores used in the businesses of butchers, poulterers, fishmongers, dairies, etc., the United Kingdom now possesses public cold stores of a total capacity of 45,000,000 cubic fest of insulated refrigerated space. Among the most important centres London comes first with its 18,000,000 cubic feet, then Liverpool, which has 9,500,000 cubic feet, Manchest 1. 3.000,000 cubic feet, and Glasgow, 2.500,000 cubic feet

This total canada is sufficient to accommodate some 18,000,00) careas of mutton weighing round about 450,000 tons.

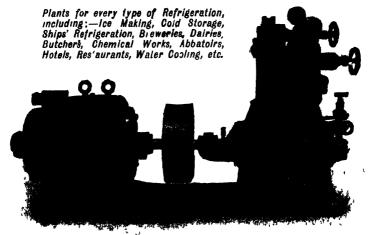

A large number of vessels are employed in the transportation of meat and other food products from the food producing countries, such as Australia, New Zea land, South America, etc., both to Great Britain and other lands whose food-producing capacity is below their consumption. These vessels are fitted with insulated cold divrace commercia and servicerating machineses to maintain these of the promitte key important. The number of british retrigerated steamers engaged in this trade is now 260 vessels with a total refrigerated capacity of man 10,000,000 sable feet,

To illustrate the anormous responsibility which often hangs on the sleuder piston rod of a refrigerating machine, it may be mentioned that the value of the fruen meat carried in the retrigerated holds of some of size largest of these vessels often amounts to £150,000,

the Bronze Age, during which period many highly cultured civilisations developed and mostly disappeared; the Iron Age, which may be considered to be the transition period from the Bronze Age to our present complex divilisation, which we will describe as the Steel Age. It is, indeed, no misnomer to describe our present age as that of steel, since railways, modern shipping and aircraft, with their fundamental effect upon the conditions of individual peoples and the relationships of different peoples to each other, would have been impossible but for the technical gonius of the men who developed the iron and steel

industry during the last contury.

Iron was first obtained in small quantities, and was used with more or less skill, either as iron, or converted into steel. The great impetus to the use of steel, however, came when Bessemer conceived the idea of producing large volumes of steel by his pneumatic process, which consisted of blowing out the impurities from liquid pig-iron by passing air through it under high pressure. Siemens' conception of making large quantities of stoel in gas furnaces worked on what is called the regenerative principlemeaning that much of the waste heat is used over again—extended the mass production idea which underlaid Bessemer's work. The genius of the blast furnace engineers kept pace with the steel-makers in the production of crude iron. The result is that the steel output of the world per annum is probably 50,000,000 tons.

For centuries steel and Sheffield have been synonomous terms. We will not here repeat that muchquoted reference of Chaucer in his "Canterbury Tales" to the Shoffeld steel "thwitel." The cutlery produced in Sheffield in the old days was made from irons imported from Sweden, and the manufacture settled in Sheffield as a result of the natural facilities in the way of power provided by the numerous stroums in the district capable of working water whoels, which turned the grindstones upon which the knives were ground. Cutlony steel was produced by heating Swedish iron at high temperatures in a car-bonaccus mixture, and the bars of carbon sicel so produced were forged together into outlery shear steel bars. In the middle of the eighteenth century a very important development in steel production was brought about by the discovery by Huntaman that steel might be melted in the cracible, and his process is, indeed, still in operation for the pra-duction of the highest class of tool stocks. It will, duction of the inguest case of too stocies. It will, however, be realised that steel produced in small crucibles was not likely to lead to the mass production of rails, bridges and steamships, and it was not until the development of the processes of Bessemer and Siemons that the present state of things could be

Steel manufacture as conducted both by the Bessemer and the Siemens process may be one of two kinds, eithig said or busic. The add processes with the original processes, so called facture the furnasses were lined with silica, which is recognised by chemists as an acid. Unfortunately, some of the largest deposits of iron ore in the world are very rich in the element phosphorus, which has a detrimental influence upon the properties of steel, and it was found that iron produced from such ores considered anoth phosphorus, which was not eliminated, during the process of manufacture It is to the process of the process of manufacture It is to the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the pro Steel manufacture as conducted both by the

downormate the companies and the tries, mainly using their own phosphoric ores, which made possible their attempt of 1914, would have been impossible had it not been for the distinguished

impossible had it not been for the distinguished work of those Englishman, Thomas and Gilchrist.

The large Shemled steel works, the names of several of which are household works, wore the ploneers in some of the most important processes and steels for instance, when Sir Henry Beasemer developed his Bossomer process, Messrs. John Brown and Company may be considered to have substantially assisted its success by putting down the first independent plant for producing that type of steel So with the inest recent developments of all, the electric furnaces. The large Sheffield firms, such as Brown, Vickers, Hadfields and Firths, creeted and worked those furnaces long before they became a compercial Vickers, Hadfields and Firths, creeted and worked those furnaces long before they became a commercial possibility, with the result that to-day the electric process is thoroughly understood Economical features have been introduced, and very pure special steels in large quantities are now available for our engineers. The influence of our large industries upon the progress of civilation through the courageous adaptation of new ideas is often lost sight of, and many of the good things which humanity is now able to enjoy may be traced to the judgment and courage of individual men in our diberent industries who have not heattated to risk large sums in their development. development.

One extremely important development during the last twenty or thirty years has been the direct association of science in the iron and steel industries, and inat twenty or intry years ass been the direct association of science in the iron and steel industries, and
in no other industry has the development been so
definite. Probably this was due to associately for
having a fleet espable of taking cast of the interest
in time of trial. Edience is utilised through research
laboratories, and several of our leading steelworks in
Sheffield have for many years had excellent and
well-equipped laboratories. Some of these laboratories
have conditionated to the development of the steel
industry by the discovery of new steels. For instance,
in the eighties, the Hadfield laboratory contibuted
the well-known manganese steel, so important for
trammay crossings and, indeed, for many purposes
where hard wear is required. Perhaps, however, the
must remarkable development of recent times is the
discovery in the Brown-Firth laboratory of the
instless steel, which is now well known to the public
in the form of rustless table and caving knives. This
steel has now been perfected, and Sheffield manufacturers are producing millions of reliable stainless
knives every year. The uses of such a rustless steel
are practically without limit.

The manufacture of tool steels is a very important.

The manufacture of tool steels is a very important side of steel manufacture. The development of the ordinary carbon teal steel through the alloy tool steels up to the presentaligh-speed steels is quite a technical romance. The present high-speed steels, when made into turning tools, cut off the steel being machined at such velocities and in such thick turnings, that the nose of the outling tool becomes red-hot the ough the friction; yet notwithstanding, the metal preserves its temper and outting edge unimpaired.

We have said little about armament steels, aircraft steels, automobile steels, etc. but from the foregoing remarks it will be clear that the manufacturing gehius of our recouls has contributed the essential processes The manufacture of tool steels is a very important

remarks it will be clear that the manufacturing gabins of our people has contributed the essential processes which smalls strons and specia as metals to be preduced in bulk. The work of our scientific metallurgists, too, has been sufficiently effective to convert such irons and steels fint the different kinds of special alloy steels required for 'lises important purposes. In conclusion, it may be abserved that, whereas the wrought iron of one hundred years ago had a tensile strength of only 20 tons per square inch, steels may now be obtained which have a tonsile strength well exceeding 100 tons per square inch, steels may

#### HUBE MANUEACTURES WROUGHT IRON AND MILD STEEL TUBES OR PIPES

By H. J. MIODES.

Pares 212.2. A LTHOUGH the manufacture of tabes from wrought from and steel is a comparatively new industry tabers suite between states of the industry at the process of manufacture are more or less unknown. It seems to ploable that the first tubes manufactured from wrought from were intended for the barreles guns, and used only for that purpose one of the first instances of their application to one of the first instances of their application to one of the supposes for which they are now so largely made is reported in 1816, when William Murdech, the place of the war in the place of the war in the place of the war in the place of the war in the place of the place of the war in the place of the place of the war in the place of the place of the place of the place of the war in the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of Birmingham. The end of the war in Europe in that year had probably very greatly reduced the demand for gun bands and thrown large quantities on the market. In many parts of the country to-day gus pipes are still spoken of as gun barrel. The need of wrought from spices grew rapidly, and a quicker and less costly method of manufacture from that of gunbarrel making had to be so git for, and this was discovered in 1826 by Cornelius Whitehouse, of Wednesbury, when he invented the process of buttwelding by a draw-bench and dies

The principles of his invention have been in use ever since for the manufacture of tubes by the buttwelding process, but, naturally, the methods of application have been greatly altered and improved

The production of tubes by the Whitchouse invention did not for long fulfil all the requirements of the tion and not now then were arising, and for which larger and stronger tubes became necessary than could be produced by the butt-welding process. The minds of many ingenious men were at work, and it was only after long and costly experimenting that, somewhere about the year 1812, the process known as lap-welding was established.

The methods of welding tubes known as butt-welding and lap-welding were, until comparatively recently, the only processes employed for the manufacture of wrought from and steel tubes, and probably more than three-fourths of the world's requirements are still manufactured by these, two original methods.

The butt-welding process is usually the process by which tubes from t-inch to 2-inch bore are manufactured for gas, water, steam, and like purposes where the pressures are normal.

where the pressures are normal.

The strips or hoops are delivered to the tube mill from the free and steel works of a length, width and thickness, suitable for the sise of the tube to be made. The flat strips and hoops are brought to be made. The flat strips and hoops are brought to be made that a strips and hoops are brought to be made that a strips and deliverable to the shaped so as to gradually bring the hoop into the shape of a turb, the edges being forced squarely together and welded. The tube after being welded passes immediately from the draw-bench through sizing and straightening rolls to give the correct outside diameter and finish to the tubes.

The lan-widther processors he should be a failed to all since

The lap-welding process can be abulied to all areas of tube from 14 then up to as large at 6 feet.

of tube from 14 hood up to as large sh 6 feet.

The strips or plates are first of all planed or searfed on the edges. The scarfed strips are thus heated to a bright red heat in a "turning-ap" or "bendied to a bright red heat in a "turning-ap" or "bendied to a tube briefly described in this short of the form which they are drawn through a likewing the plate into a tubeler shaped as to bend the plate into a tubeler shaped with the edges over-lapping. The plate, which we shaped, is termed a skelp. The skelp passes into shaped, is termed a skelp. The skelp passes into shaped, is termed a skelp. The skelp passes into shaped, is termed a skelp. The skelp passes into the which grade which are set one above the into the widding rolls, which are set one above the into the widding rolls, which are set one above the other, each having a semi-circular groove of a the largest producers.

mandril.

The method described of lap-welding through rolls is generally employed for sizes up to about 12-inch diameter, and diameters larger than 12 inch are usually welded by a different process. The plates are formed into tubular shape in plate bending rolls instead of through dies on a draw-bench. The tube in this form is then fed through a welding machine, where, instead of heating the whole tube the lapide deges only are heated bit by hit by the application of water-gas, or calben laydregen fame, followed by hammers or rolless, by which the welding is effected along the whole length of the seam.

When the use of mild steel became general, a great deal of attention was directed to finding a suitable method of preducing tubes direct from a suitable method of predicing tubes direct from solid bars, by which means of course, there would be no weld. These tubes became knows as solid drawn or weldless tubes. A great deal of ingenuity was displayed, but the difficulties to be overcome were so great that it is only within the last few years, and after the expenditure of very large sums of money, that any of these processes proved a commercial success. By far the greater part of the weldless tubes made to-day see produced by what is known as the but-rolled prodess. As a rule cold-drawn tubes are only produced for certain special purposes, the cost of production being very much greater. The flist operation in the manufacture of hot-olled weldless steel tubes staris upon a billet of round steel bar, cut to such dimensions as will give the required size and length of tube. of tubo.

The solid billets are charged into a heating furnace where the highest temperature is conserved at the drawing out end, so that the billet in its progress through the furnace is assured of a uniform heat through the furthace is assured of a uniform heat throughout. A number of methods have been employed for piercing the billet and rolling it after plereing into a tube. The process now generally adopted for piercing is either in a hydaulic press or through a piercing machine, where the revolving action of the rolls of this machine cause a displacement of the metal in the centre, while at the same time for ting the billet over the mandril or by means of a pilger or gap rolling mill. After the tube comes from the last rolling mills, it goes into a pickling tank to remove scale, Following upon this operation, the tube is finally finished by receiving one or more cold passes through a discount to the tube is a made to the dark of the tube of the pickling tank to remove scale. Following upon this operation, the tube is finally finished by receiving one or more cold passes through a discount to the tube is a made to the dark of the tube is a made to the dark of the tube is a made to the dark of the tube is a made to the tube is a made to the dark of the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made to the tube is a made tube to the tube is a made tube to the tube is a made to the tube is a made tube to the tube is a tube tube to the tube is a tube tube to the tube is a tu

The processes of manufacture of wrought iron and steel tubes briefly described in this short article, vis., the welded and the weldless processes, together constitute the methods by which practically the entire requirements of the world are supplied.

#### BRASS FOUNDING INDUSTRY." THE MANUFACTURE OF STRAMES COES SORE GEORGE F. ANDERSON, A.M.I.Med

WITHOUT the art of the brassfounding industry, accupating of his so satisfe a wayby the mantens of the control of the brassfounding industry, accupating of his so satisfe a wayby the mantens of the control of the satisfe a wayby the mantens of the control of the satisfe and industries of the much the poorer for many ingenious and necessary appliances. Of the various metal industries there is peapings none more interesting or important than that, which is concerned with the inaunfacture of that large class of engineering appliances and accessories known generally as steam and water distings and belief mountlists. There is none which has to meet such varied countitions and requirements, so numerous and diverse as to cover almost every class of mounting or fitting, valve, cock, gauge, tray and connection used in the control of steam, are reverted as plumps, engine governors, injection, the manters and circulators, dec.

These fittings, although separately appearing un important, have collectively to perform functioning duties of the highest order, when considered in relation to the successful working of modern steam or hydraulic power plants, since they have to control and distribute in exact quantities the ossential power forces such as xeam, water or gas, upon which the complete installations are entirely dependent.

Thus in almost every planse of industrial or domestic activity the products of the demestic water supply, or the multitude of oruse fittings such as door handles, locks, gas and cleerric lighting fittings of the mannents, etc. whist on the industrial side at is universally admitted how vital are the duties of the many and varied types of valves, cocks gauges, labricators, injectors and other ongineering accessories used in bolder and entine houses, and also in numerous annufacturing processes.

of the many and varied types of valves, cocks gauses, inhicators, injectors and other outnouring accessaries used in boiler and endus houses, and also in numerous manufacturing processes. In the processes in the temperature of the temperature of the temperature of the temperature of the temperature of the world to-day which could have attained its present high standard of neifection without the assistance of such indispensable cugineering auxiliaries as brass, bronze, and non valves, cosk, fittings and stoom appliances. They are needed in thousands to equip the world's boilers, engines, tuibines, steamships, locomotive, acropiances, motor cars and transport velicities, whilst the building and shifed trader require large supplies of radiator valves and fittings for heating systems, also plumbers fittings for water and sanitary services and senni-totar or domestic pumps.

It is produced to the services are utilised and adapted to the newto of mankind. Thus the stop valve governs the starting and stopping of all kinds of now cumits on land or sea, pressure gauges indicate with absolute reliability the pressure inside boilers and cugines; safety valves protect boilers from bursting by opening automatically at the maximum safe pressure; water gauges tell at a glance the lovel of water in the boiler under pressure inside boilers and cugines; safety valves protect boilers from bursting by opening automatically at the maximum safe pressure; water gauges tell at a glance the lovel of water in the boiler under pressure inside boilers and cugines; safety valves protect boilers from bursting by opening automatically at the maximum safe pressure; water gauges tell at a glance the lovel of water in the boiler under pressure in the recomment of the maximum safe pressure; water gauge tell at a glance the lovel of water in the boiler under pressure in the boilers and cropical safe and through the occan fog and so compensate for boilers, from the safety valves in the first of the safety and the safety and the safety and the safe

more than in the metal melting and carries wearly ments. Hence is that in the making of irms and broase castings the greatest care is required by the large and also in the making of irms and broase castings the greatest care is required by the cast is a second for a second form and also in the cast is a second for a second form prevailing inside the furnest agree of the restless of many alloys have a pronounce flatteness on the preparties of the sast metal. Furnishmore, the meaning mum is unperstars, satisfied white the mental second form and the temperature, objectively in the furnace, and the temperature objects while, makes at the time of casting, have an equally marked effect on the strength and quality of the metal. All castings are carefully inspected and tested before distribution to the machine short, to ensure freedom from thow-holes or other defects. Specialised products whe say evices are now manufactured in large

interruption to the machine shops, to climite freedom from blow-holes or other defects. Specialised products with a valves and cooks are now manufactured in large quantities by means of the latest and most modern types of machinery, comprising special automatic and semi-autoriatic machines which are capable of immensional and control of the semi-autoriatic machines which are capable of immensional products at various and stitings are made of semi-autoriatic machines which are made of the said products at various stages during manufacture. The results of the semi-autoriation and tests are carried sets as all products at various stages during manufacture. The results are appliances such as valve, cocks, presented autoriation, the order of the semi-appliances and senior such as all products at various stages during manufacture either by the ordinary hydraulic test, or, if desired, steam presented up to as high as 4001s per square inch and, if necessary, as much as 600° Fahr superheat. The modern brassfounding and engineering comparationally has facilities for, and regularly corries out, chouncial analyses of all rew materials as well as tensific and compression tests to destruction on materials under manufacture, foi it is only by the aliance of industry with science that the highest standard of uniformity and excellence can be manufactured at all times. In 2018

and excellence can be maintained at all times and excellence can be manufacturing methods have way improvements in manufacturing methods have run parallel with developments in the designs evolved to meet the exacting conditions of modern servace, and all classes of fittings can now be obtained in several ranges of strengths and weights to suit any

several ranges of strengths and weights to suit any conditions of pressure or service.

Standardised guantity production is thus the order of the day, and it is generally admitted that preduction at the maximum rate and minimum cost benefits the whole community.

In addition to the steadily increasing demands of home trad, the high opinion entertained abroad for British manufactures has resulted in a large and insistent demand for the multifactions products of the British brassfounding industry, and the export demand cuttinues to giow since A come arose showing exports of miscellaneous brases and bronne fittings from the United Kingdom for the pe swar year 1913, with that of 1919, and a portion of 19.0 is interesting — Year.

CORNBROOK, MANCHESTER, ENG. ABC 5th Edition. LIEBER'S.

OPPER to still Scatter the effects of the scaley is creased production brought about during the war, the cossation of hostilities having thus far entirely Falled to bring about the enormously increased general communition which was so confidently expected by the leading producing interests Various reasons are to be assigned for this state of affairs, which, however, was regarded as inevitable by all unbjassed observers. For ne thing all the belligerent powers held huge stocks of crap metal at the end of the war, stocks which even yet have not been digested fully, and the utilisation of this material has enormously restricted the demand for new copper in all parts of the world Another very important point is the financial position of all the European belligerents. Each of these countries has been involved in building up a colossal foreign indebtedness, with the Tesuit that the exchanges of the world are very seriously Against them, and this has of course the inevitable result of increasing the prices of all imported commodities, by the extent of the fall in the exchange. For metance, the depreciation in the pound steeling measured in dollars accounts for over \$30 a ton in the price of American somer in the United Kingdom to-day, a fact which obviously restricts the buying power of this country, and It may be that the exchange will fall further yet, with a corresponding appreciation in the cost here of all com modities imported from the United States aunties to this country applies in still greater measure to Belgium, France, Italy, and the Central Powers, whose purchasing on anything like the pre-war scale is utterly out of the question, a crude fact which sooner or later will have to be recognised by copper producers

1.126

Since the war, concerted efforts have been made to feduce production, and in individual cases output has been brought down to about 69 per cent. of capacity. Dut in spite of this, enormous accumulations still exist in the hands of the leading producers, and it is a affection whether the burden of this weight can be sustained indefinitely, more particularly as the accumulation is not being diminished appreciably, and the cost of finance is becoming a serious item. The leading American producers formed an alliance last year, by which their sales for export were concentrated under the control of a single group, and this has naturally been a factor in the maditating of prices.

So far as the United Kingdom is concerned consumntive business has been fair, but, as indicated above, a considerable portion of the demand has been satisfied from the scrap which was piled up during the period of lastilities, the brass trade in particular being large buyers of this class of material. The main demand for new copper has come from the wire drawing and electrical industries generally In these sections of trade considerable activity has been seen, and many of the wine drawers have now from eight to nine months work on their books, while, if only labour equitted, many of the general electrical engineering concerns could anticipate the fullest employment for two or three years to come As a result of the activity of the wire trade, demands here have again run largely upon the special forms of conser used in this industry, which throughout the year have commanded a premuin compared with other descriptions of metal, a premium which still continues.

A great disappointment to America has undoubtedly been very small demand experienced from the Control Powers, but it is impossible that either Germany or Austria could form any effective factor in the copper narket, if only from the adversald exchange considers tions and it is curious in this connection to note that

various to Bermany and having it remained there into various forms of finished material for expert, practically on the basis of America paying for the labour. It is possible, that by some such means as these, it may be possible for German industry to get on its feet again

American consumption has been decidedly good, for tagter fadeed than during the payway period but is busher fadeed than during the payway period but is busher manners and the same means sufficient to absorb coursers supplied to manner can compensate for the shutting off Gergaan; buying. It is not forgotten that prior to the world-uphean of Germany was taking about half of the United Stape. Supportable surplus of material, the mere fact that a large portion of this was being used in the production of war material in anticipation of the hostilities which she had planned, not affecting the situation from this aspect.

Producers are disastisfied with the prices which they are able to obtain for their motal, meaning the which is the stabilised price in America, at the probability which is the stabilised price in America, at the probability would conditions. The cost of producing cought has of course increased more or less in line with other commodities, but even so all the larger propositions are working even to day at a sufficient murgin of profit, and it may be that the unsatisfactory nature of business may force a dissolution of the centralized selling arrangements, as one or other of the parties concerned, finds the position becoming too buriensome.

The curtailment in production which has so far been seen has about only kept pace with the diminished demand, and although the stocks are smaller than then were it is doubtful whether they have been reduced much during the past few months. In many cases output has been cut down to the economic limit, and any further curtailment would involve a substantial advance in the cost of the metal produced, so that altogether the situation is one of particular interest although quintons are divided as to how it will resolve itself.

According to "Quin's Metal Handbook and Statistics" production during recent years was as follows in tons —

	1914	1915	1916	1917	1918

Telegraphic Address-"Wiredrawn, Reg. London."

THE manufacture of lead is amongst the oldest of British industries, and within recent years it has developed into one of considerable magnitude and Importance.

Among the chief uses to which lead is put is its conversion into white lead (hydrated carbonate), which, ground with oil, forms a pigment of great value in itself, and is the most reliable base for practically all paints.

It is also largely used in glazing pottery and porcelain.

The method of manufacture chiefly adopted in this country is the old stack process, which, though slow, produces white lead of great covering capacity, density and durability.

Red Lead (sesquioxide) is manufactured on a large scale, and is used, after mixing with oil, as a pigment for protecting ironwork, &c., and for jointing purposes; it is also an important ingredient in optical and other glasses, and during the war was in great demand for the electrical storage batteries used in submarines. &c.

Litharge (monoxide), a less known but equally important oxide of lead, is largely used in the rubber, varnish and accumulator industries.

 Metallic lead is in universal use in civilized countries in the form of sheet lead for roofing, &c., and pipes for water and gas; and owing to its great acid resisting power, pure lead is extensively utilized in plant for the manufacture of sulphuric acid and other chemical products.

For chemical purposes the presence of slight impurities is sufficient to seriously in million tons per annum.

reduce the life of the sheets and pipe, and ingenious methods have recently been introduced for freeing the lead from all traces of impurities.

Alloyed with ting lead forms solder, and lead alloyed with antimony is used for shrapnel bullets, type metal, etc.

Lead a'so is largely used for covering electric cables.

In Nature, lead occurs chiefly as a sulphide ore, which, after being mined and dressed, is calcined for the removal of the sulphur, and the roasted ore is smelted - usually in water-jacketted blast furnaces-to the metallic state.

The metallic lead thus obtained frequently contains silver of considerable value and appreciable quantities of gold and other metals.

Before such lead can be manufactured. the silver and gold must be extracted and the other impurities removed.

Impurities such as copper, antimony, and arsenic are eliminated by liquation and calcination, and the pregious metals are usually recovered by stirring zinc into the molten lead: zinc, being lighter than lead and having a greater affinity for gold and silver than lead possesses, on ocoling carries the precious metals to the surface, so that they can be removed by skimming.

Lead ore is mined to a small extent in the North of England, Derbyshire, and Wales, but the chief lead-producing countries at the present time are America, Australia and Spain.

The world's production of lead exceeds

ESTABLISHED 1797.

# LOCKE BLACKETT & CO.

Limited,

**NEWCASTLE UPON TYNE.** 

## LEAD SMELTERS AND DESILVERIZERS

### MANUFACTURERS OF LEAD COMPOUNDS

WHITE LEAD: Manufactured by the Old Stack Process and supplied either DRY or GROUND in Oil.

RED LEAD: Manufactured in different grades to meet the requirements of GLASSMAKERS, ACCUMULATOR MAKERS, COLOUR MAKERS and POTTERS.

LITHARGE: Flake and Ground. Specially prepared for ACCUMULATOR MAKERS, RUBBER and VARNISH MANUFACTURERS.

ORANGE LEAD: For COLOUR MAKERS.

SHEET LEAD: All sizes and weights supplied up to 8 ft. wide

PIPE LEAD: Supplied in all sizes up to 10 inches diameter.

CHEMICAL LEAD: Specially Refined for use in CHEMICAL WORKS and supplied in SHEETS and PIPE.

PIG LEAD: Refined for White Lead Making, &c.

**LEAD ALLOYS:** For SHRAPNEL BULLETS, TYPEMAKING, SOLDER, &c.

SHOT: All sizes, hard and soft.

CONTRACTORS to the ADMIRALTY, WAR OFFICE and RAILWAY COMPANIES

HE war more radically affected specter (or rinc as it is frequently called) than any other metal, for the reason that Belgium and Germany were the leading counted a upon which we relied for supplies, our home produc-tion being comparatively speaking small. The situation indeed was exceedingly grave, for without spelter it would have been impossible for us to manufacture the mapitions of war which were raphired, arbiter having a particularly important military spiniteance owing to the fact that it is a substantial component of gass, which finds enormous use in cartridges th for rifles and artitlery. The cutting off of ogs usual supplies from the Continent proved a bison to the United States, whose manufacturers previously practically absorbed the American domestic production, the result being that output there was largely increased, and indeed formed the main tay of supplies for the A lies during the period of hostilities. With peace concluded, Belgium began to get back to work almost immediately, and output there has improved remarkably steadily, progressing prac-tically every month Before the war Belgian output was about 200,000 tons a year, largely obtained from imported raw material, and at the present time the country is producing at the rate of about 90,000 tons a year, assuming that the recent monthly output is maintained, and improved upon as might be expected.

It was anticipated in our last review that

American production would tend to fail off when peace conditions in Europe were resumed, and this forecast has been fulfilled, the output there which in 1916 and 1917 approximated 609,000 tons having fallen by 1919 to a little over 409,000 tons. The extravagant prices to which the metal was driven under the stress of military requirements naturally stimulated American production very greatly, and many high-cost mines were worked profitably, which, when the market assumed a reactionary tendency, had to close down, with the result that the refluing works also found themselves obliged to curtail operations. This is still: the position there Germany appears to be producing spelter at a fair rate, but no reliable statistics are available, although that country is estimated to have produced in the neighbourhood 50,000 tons during 1919, opmpared with about 280,000 tons during 1919, opmpared

Japan forged ahead after war broke out as a producer of spelter. In 1914 the output in that country was only about 8,000 tons, but by 1917 it had risen to 54,000 tons, owing partly to the imports of concentrates from Australia, but since then falling prices in the European markets, and the heavy accumulations which had been piled up by the Ailles avainst war needs, brought about a sharp reduction in output, that tonst during 1919 having been only about 22,000 tons. Cauada has been turning out spelter on a higher scale, but here, too, post-war nearlest on militides highe collectified an adversal factor, and humilities higher collectified an adversal factor, and humilities higher collectified an adversal factor, and humilities to be only about 11,000 tons. Australia is a very imageness. Australia is a feel of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the collection of the

1912 and 1913.

wiffid's spetter stautien, owing to the enormic supplies of zinc ores and consistrates produc-there. Soon after the orthogaic of series as an elation area, formed of all the \*Asistralian at groduses, the cantrol and dispose of the Colom output of zinc concentrates and metal. An apto-date plant is now operating in Tasmai which is intended ultimately to deal with la quantities of the raw material. Consideral success has attended the efforts to treat the and regular shipments are being made not o to Europe, but to India, South Africa, and ele-where. The control of the Australian concenwhere. The control of the Australian concentrates is in the hands of the British and Australian Governments, and will remain so a number of years yet. Important schemes v formulated to ensure treatment of these cond trates in the United Kingdom on a large scale, but the arrangement seems to have been u conceived and muddled, with the result t to-day the British production of spelter is on a smaller scale than for many years, several important works having been forced to close down during the summer of 1920, partly owing to labour demands, but also in part to the fact that they were unable to obtain their raw material on economic terms. The principal countries producing zinc ores are the limited States and Australia, but substantist quantifies are also furnished by Poland, Austria, Spain, Italy, North Africa, Mexico and Japan.

Spelter in peace three is used mainly for galvanizing, that is to say, as a coating to preserve iron and steel from atmospheric ornesses, but it also finds a very large use, as indicated above, in brass, of which it is usually a soughment to the extent of 40 per cent, the britished being copper. Large quantities of, septice are rolled into sheets and p ates, which shad saide application in a large variety of uses. British works are interested in this branch of industry, and big quantities of sheets are also produced in

Belgium, Germany and America

The world's production of spelter is estimated

### By JAMES WHITEY, Chairman of the London from and Steel Exchange.

"HEreal ratilized iron of commerce consists of stoll meets covered with a coating of spelter or zinc, the process being British, and dating from 1846, when it was patented in this country. The object of the process is to render the steel immune from oxidation. An unprotected sheet of steel exposed to the weather would rust and decay rapidly-covered with spelter it will withstand climatic and atmospheric influences for years without deterioration. The word "galvanized" has no real significance in this connection, for galvanizing plays no part in the deposition of spelter upon the steel, and the term seems to have been applied originally because spelter and iron together form a galvanic countle.

Lit the earlier days of the industry, the basis of the sheets was iron, and the term has survived, much as the term "charcoal" impers in the timplate trade, though its original significance is only a memory. The original iron sheets were mainly produced in Staffordshire, but under prewar conditions, the steel used was imported partly from Germany, Belgium, France, and United States, in the form of what was termed sheet bars. A number of works, however, made their own sheel and sheet bars. Steel haw practiccally appeareded iron, for although iron inviects are said indice, the quantity is nearligible.

cally asperseded iron, for atthough rox intests are siffl mide, the quantity is negligible.
Under modern practice, after leaving the rolling still, the steel sheets (then known as blacksheets), are pickied in a mixture of hidrochioso of sulphuric acid and water, to remove any sale shinch may be adhering to them, and are tion gased through a bath of midten spelter, from both they are gongulated young to

any full which may are then make about the make of through a bath of motion appropriate from which they emerge completely coated.

The sheets in the recreatable form are either flat or therrogated. The flat sheets find wide emphasized in the working up trades, being used for the manufacture of spouting, ridging, flating saths, cisterns, tanks, sanitary dusbins, when between the cisterns, tanks, sanitary dusbins, such as feeding troughs and tarm apparatus, such as feeding troughs and the like, while the currently sheets, which normally constitute the major gart of the output, are used for reofing and feating purposes, and also for making tanks.

The corregations impart great strength to the sheets, and most sheets have either eight corrugations, or ten corrugations, such sheets being knows as \$18" and 10/8" respectively, but other specifications are also made for certain markets, for instance 7/8" 9.3". 11/8" and 12/8".

special category are also make for certain markets, for instance, 7/3", 9/3", 11/3", and 12/3".

The sheets range in length from four feet upwards, but the usual specifications are from five to top feet. The basis thickness is always 24 gauge, which is understood to be taken in the black—that is, before the sheet is galvanised, but not whimser and thicker sheets are rolled, say from 15 to 30 santa.

aw, from 16 to 30 gauge.

The various export markets have their own poculiarities, both in the sisse and gauges of the sheets, and in the mathed of packing. For instance, Calcutantains simest invariably 24 gauge sheets, 19/3", which assessment in bundles, while Sombay will have hardly snything but 8/3" × 24

India is, under normal circumstances, by his the largest market oversear, there being the enormous demand for buildings there, is connection with the tes gardens and espates, and so ds, while large quantities are taken by the rativesy companies for the roofling of sheds, and shows

are used, too, in many other directions,

The "count" is very important in galvanised sheets, retailers' profits being materially affected by the number of sheets to the toe, and the desirability of getting the very utmost number has led to the cutting of the gauge, so that a few extra sheets can be obtained.

In the Eastern markets orders come over in many cases in which the gauge is mentioned, also the number of sheets per ton, but these in most cases do not agree, and the invariable practice is to execute the order in the number of situations from irregarding of comments.

procise is to excent the order in the number of steel per ton, irrespective of gauge.

The galvanized sheet industry, which is a very important branch of the British Irva and Seest trades, was entirely discounting during the war, but has since then made wonderful strides towards recovery. In 1916 our exports exceeded 560,00 tons, which figure had falled 1919 to less than 9,000 tons. Progressive improvement followed, the total for 1919 being 183,000 tons, while for 1920 indications suggest that, barring unfavourable developments, such as a coal strike, the total should easily exceed 40,000 tons. All markets have been starved for supplies for at least five years, and the reserve buying power is enoimous. The principal consuming countries are India, Australia, booth America, South Africa, and Japan, all of which have taken large quantities during the year just elapsed.

The following table, taken from "Quiu's Metal Handbook and Statistics," shows our total experts during recent years and in 1914 :---

#### CYCLES AND MOTOR CYCLES.

By H. S. BILBE, A.M.I.A.E.

DURING the past year the bicycle has regained some of the popularity it enjoyed prior to the introduction of motors. The higher cost of travelling by rail has contributed to this result, but on the other hand the introduct cost of another hand the introduct cost of another hand the introduct cost of makines, each of the higher grades, has limited sales both at home and abroad. This is shown by the specially those of the higher grades, has limited sales both at home and abroad. This is shown by the specially those of the higher grades, has limited sales but at home and abroad. This is shown by the specially those of the higher grades, has limited sales but at home and abroad at the present given to the present given by the present given by the present given the two-stroke type, the machines, particularly of the two-stroke type, the demand for which at the moment has now almost the subject to the present given been overshed. The two-stroke type, the demand for which at the moment has now almost the present given by the present given by the two-stroke type, the demand for which at the moment has now almost the present given by the two-stroke type, the demand for which at the moment has now almost the present given by the present given by the present given by the first present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the present given by the pres of cycles exported in 1919 was somewhat greater than in 1913, while the number of machines is less than in 1915, while the number-or magnines is less than half. The sales by the Government of large numbers of "War Cycles" has slee had its effect on the home market, particularly in togened to the cheaper machines, and those used for utility purpose. As regards lighter cycles saitable for racing and the sporting type of rider, it must be admitted that this demand is not fully catered for British manufactured for the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of definand is not fully cawred for British manni-facturers have for some time past concentrated on the "roadster" types, and have undoubtedly brought production to a high patch of excellence, but the lighter bicycles as used in France and on the Continent generally are the types to which the trade should give attention. There is a large maket awaiting suitable machines which must combine the stability that has always been a feature of the British product with the lightness and inproved details of the Continental machines, and this market is not by any means confined to the home demand.

confined to the home demand.

It must be admitted that the past year has not been a favourable period for embarking mpon the manufacture of new models, for which reason manufacturers have in the main refrained from drastic changes of pattern. This has resulted in slight overproduction in a few directions, though on the whole the outlook is a good one.

Many the sense have he said of the mounterture of

Much the same may be said of the manufacture of motor cycles, though the perduction of these has been handlespped by the effect of the disastrous moulders strike, which was very seriously foil. Faced with many difficulties in connection with materials and hany dimensions in contention with magnified home demand, the trade was almost compelled to neglect export business and turn its attention to types which offered the least difficulty to produce. This resulted in the production of a large number of low-powered the present situation also are the imminence of much hereased traition and the great advance in the price of petrol and other, supplies. Nowithstanding all these the sestion we have a post one. There still exists a good one. There still exists a good one of the post of the post of the post of the post of the post of the powered insiding. As secretally applied fractines being produced if may be sufficient the popularity of the low-powered insidings. As secretally an interpreted in the proved the productions have proved themselves capable of fully meeting all these of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of t

have done exceedingly well.

A certain amount of development has taken place in the motor scotter, which has been demonstrated to be a practicable mount with much to recommend it for certain purposes. Some progress has also been made in the direction of a low-priced four-wheeled vehicle to accommodate two or more passengers, and designed on motor-cycle lines With the present high taxation and heavy running expenses, such a type has an exceptional opportunity of securing support.

type has an exceptional opportunity of centring support.

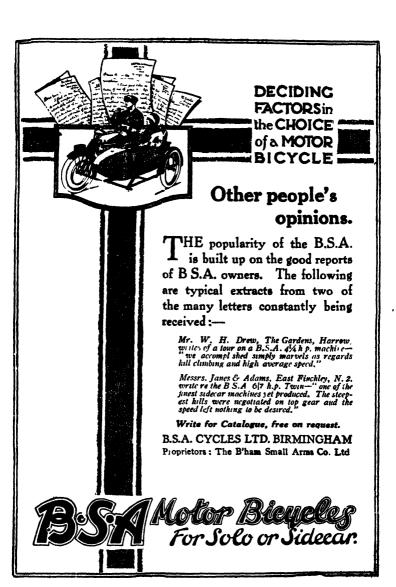

According to reliable estimates there are between 3% and 4 millions of serviceable cycles in the United Lingdom at present; the capital of cycle manufacturing firms exceeds 50 millions, and 75,000 persons are wholly or in part employed in the manufacture and sale of cycles production of cycles probably exceeded 30,000 machines per annum, while these figures have been considerably exceeded during certain previous periods immediately prewar the number of motor cycles produced was approximately 130,000 per annum, and the export of machines and parts was rapidly increasing. The appended tables show the national importance of those industries:—

### MOTOR TYRES.

By A. P. AMBLER.

ONDERFUL progress has been made during recent years in the pueumatic tyre industry, which, though now well established, is still comparatively young.

With the production of more powerful and heavier motor vehicles, tyre manufacturers have been called upon to solve many difficult problems, since speed and weight mainly determine the life of any kind of tyre.

All up-to-date tyre makers have accordingly developed the scientific or experimental side of their business to a considerable extent.

Large chemical and physical laboratories form a very important part of a tyre plant, and constant tests are made of the raw rubber, cotton, and pigments to ensure that these materials conform in every way to specification.

Finished tyres are, of course, subjected to severe road tests, and nowadays these are supplemented by machine tests in the experimental room approximating as closely as possible to conditions met with in actual running on the road. From the records made of the behaviour of the tyres on road, track, and testing machine, valuable information is obtained and carefully applied to effect improvements on standard designs.

There are two kinds of motor tyres, one with a foundation of piles of strong woven canvas, and the other with rubber insulated cords or cord fabric. The former is built up of four or more piles of canvas to which the beads are fitted, after which the tread, made of high quality rubber, is applied. In some cases the foundation and tread are vulcanised together, while in others the foundation and tread are built up and partially vulcanised as separate units, being afterwards vulcanised together as a second process in a steam-heated hydraulic press. At present manufacturers are about equally divided in their adherence to the two methods.

The manufacture of the tyre made of insulated cords is a much more elaborate undertaking, involving the use of specially-constructed machinery. The base units of the cord foundation are strands of fine strong cotton, insulated in a coating of pure rubber and multiplied until the cord has been formed. The object of insulating the cords is to minimise friction. The manufacture of the cord fabric tyre, however, is similar in many respects to that of the canvas tyre, and in all cases the methods of fixing the beads and tread are almost identical. It is claimed that the cord tyre construction ensures maximum of resiliency and life, without chafing under driving strains, and greater speed, or, inversely, the same speed for a lesser expenditure of driving energy.

Not many years ago the rubber mostly used in the manufacture of motor tyres was the Brazilian variety, commonly called "Para" or "wild" rubber.

It had the effect, however, of stimulating the development of the plantation rubber industry. Experiments were carried out by enterprising tyre manufacturers with wholly satisfactory regults. By the use of plantation rubber in the making of tyres a greater thickness of tread could be afforded, and a larger percentage of rubber could be used in the compounds from which the tyres were made. Stringent tests carried out under the supervision of the Royal Automobile Club proved that the service given by plantation rubber tyres was equal in every respect to that given by tyres made of "wild ı ubber. In the design of the tread, tyre manufacturers have to take into account the liability of a car to skid. It is recommended that the driving wheels at least should be shod with a tyre with non-slipping properties.

About 1909-10 the great expansion of the motor car and motor vehicle industry was

largely responsible for a serious shortage in the

world's supply of rubber, and one of the wildest

booms known on the stock Exchange resulted.

wheels at least should be shod with a tyre with non-slipping properties. For several years nearly every motorist considered it essential to fit his car with one or more metal-studded tyres, but the proved superiority on all kinds of road surface of the all-rubber non-skid tread, has resulted in it

superseding the metal-studded tyre.
There are numerous types of all-rubber non-skid treads on the market, and new patterns are constantly being introduced. With many of them it is obvious that appearance and not

efficiency has been the first consideration.

Anong the leading British non-skid tyres which are generally accepted as the most effective on all roads may be mentioned the Chucher Cross, the grooved pattern, the rubber-studded type, and the ribbed tread.

Bigger pneumatic tyres afford greater freedom

Bigger pneumatic tyres afford greater freedom from road shock, and mechanical stains on the the car itself are considerably reduced. There is in addition less damage to the road when large pneumatic tyres are used instead of the solid variety on commercial vehicles, and it is worthy of note that Norway is the first country in the world to propose national legislation on this account that will specify the equipment of pneumatic tyres on motor lorries up to two tons capacity. Giant pneumatic tyres are made in sizes up to 12 inches diameter.

Pressures recommended for giant pneumatic tyres being almost double those used for ordinary meter car tyres has necessitated the introduction of a mechanical pump, which will soon become an essential figurent on every industrial chassis running on pasumatic tyres.

industrial chassis running on passumatic tyres.

From the following figures it will be seen that British exports of tyres and tubes show a very satisfactory increase over 1919:—

Nine months ended 30th September. 1913. 1919 1920.

# BRITISH GRANITE QUARRIES. By H. J. GRACE.

RANITE primarily consists of quartz and orthoolase, biotice, muscovite, hornbleude, augite; and is holocrystalline. Other minerals entering into its composition are plagicolase felspar, oxides of iron, apatite, zircon, gamet, epidote, cordierite, sphene, sepaz and tinstone; calcite, limonite, kaolin and chlorite leing among the resultant products of decomposition. Commercially, the term "granites" covers products that evade the strictly correct geological definition, such as syenites, diorites, granophyres, gabros, greenstones, and in some cases grits.

Aberdeen quarries yield a true and distinctive granite; Peterhead, Kemnay, Dalbeattie, ('rectown and Ross of Mull being other deservedly

renowned centres of the industry.

In England, Leicestershire, Cornwall, Cumberland and Weatmoreland are rich in areas of supply; Warwickshire also possesses local sources. Wales has large areas extensively worked in Carnaryonshire. Ireland has a considerable supply in several districts, notably in Newry. The Channel Islands produce a large quantity of material, and the Isle of Man has an extensive area; but difficulties of transport hinder the development of the Manx industry.

The first step in the opening of any quarry is the removal of the top soil, or overburden, after which lifts or levels are excavated of varying depths. The accumulation of spring and surface water during the operation of sinking, and afterwards, necessitates almost continuous pumping where the quarries are worked in excavations or pits. The granite having been bored, the faces are divided into motions, averaging usually about 10 yards in width up to about 20 yards, with a set of men to each motion. Preparatory to blasting, holes are drilled into the rock by hand or by means of steam drilling machines, the customary depth being from 10 to 12 feet, the deepest about 20 feet, with a top diameter of 31 to 4 inches. As a rule two to four charges are necessary, the first being so regulated as to be only sufficiently powerful to spring the rocks-that is, to loosen and open out their joints-the final stronger charge complet-Stones that remain unworkably ing the work. large after the explosion are separately bored, charged with blasting powder, and reduced in size. Blocks intended for sundry specific purposes are roughly dressed below, prior to their removal to the surface for monumental, building kerb or sett-making purposes and for the crushing or breaking mills. The carriage of the deposits to these mills is facilitated by tram-lines and effected by horse and mechanical power. In some instances the most up-to-date quarries have successfully adopted for this haulage an aerial power-worked cableway of extraordinarily

ingenious design, the system being suggestively known as the Blondin. Steel skips carried along this cableway have each a loading capacity of 50 cwts. and upwards. With clock-like regularity these receptacles are lowered empty, hauled up full, run swiftly overhead to the crushers, into the hoppers of which their contents are deposited, and then return to their starting place, to be again lowered and refilled. In the crushing mills the stones pass through breakers into rollers, falling into elevators and then into screens, which sort out the different sizes; rejections, or tailings, being recrushed.

In the dressing of stones for setts, kerbs, etc., the first or preparatory stage is carried out on the floor of the quarry, where the blockmakers shape them into the rough form in which they reach the settmakers and kerbdressers above. These settmakers exercise a wonderfully accurate judgment in deciding at sight how each block will shape best and with least waste under their hands. Into this judged shape it is wrought by heavy hammers, lighter ones being substituted for the anishing touches. kerbmaking much larger blocks are used, the dressers wielding a variety of tools. For certain purposes, such as "Durax" setts, a stonesplitting machine of Danish invention, in the working of which a movement of the foot controls the action of steam hammers, has proved serviceable. The bursting of big stones of a size otherwise unwieldy has also to be accomplished by hand. An expert with a sharp heavy hammer, nicks the line of fracture in about the centre, then draws the great block ! by striking it smartly at one end. After a varying number of blows it severs at the line made by nicking. Stones still larger are divided by what is known as the plus and feather process; the largest of all are drifted and blasted when the former process would be ineffectual. A trade is carried on in block or unbroken granite for breaking by hand on roads and in workhouses.

The latest available returns are those for 1919, in which year the total production of igneous rocks in England, Scotland, Ireland, Wales and the Isle of Man was 4,787,703 tons (made up of 4,377,922 tons under the Quarries Act, 9,733 under the Metalliferous Mines Regulation Act and 68 under the Coal Mines Act), against 3,961,524 tons in 1918. Limestone (other than chalk) was produced to the extent of 9,837,498 tons (made up of 9,886,602 tons under the Quarries Act, 198,644 under the Metalliferous Mines Regulation Act, and 2,249 under the Coal Mines Act), against 10,156,603 tons in 1918.

The last official returns prior to the War accounted for about 11,000 tons of granite exported in the year, about 874,000 tons imported.

### THE COAL TAR COLOUR INDUSTRY.

HE coal tar colour industry began with the discovery by the late Sir W. H. Ferkin, in 1866, of a mauve colouring matter derived from coal tar. A works was started at Greenford Green, in Middlesex, for the manufacture of this colour, and the manufacture of ether godours subsequently discovered was in due course undertaken. Scientifically and commercially, therefore, this important industry is of British origin. The industry continued to grow, but, for a number of causes, which cannot be adeq ately treated here, the development took place almost entirely in Germany, and during the two or three decades preceding the outbreak of the war the various important: industries in this coursely which required dyestuffs were dependent on German sources of supply.

Nome idea of the general importance of the industry may be gleaned from the following figures. In 1913 we imported 21,731,000 worth of dyestuffs from Germany and 2146,000 from Switzerland, and it is generally assumed that dyestuffs to the value of about 2100,000 were purchased by British consumers from Butish makers. These figures indicate a total British consumption of approximately 22,000,000, and the enormous preponderance of Germany will

be recognised.

It is not, however, the actual value of the dyestuffs which makes the industry so important, as the much greater value of the outputs of industries dependent on synthetic dyestuffs, notably the great textile industries of this

country

It is impossible here to examine in detail the importance of dyestuffs to the various dye-consuming industries, and the example of the cotton industry must suffice. The amount paid by manufacturers of cotton goods in 1915 to dyers, for operations involving the use of dye-stuffs, exceeded £9,000,000, or more than four times the value of the total consumption of dyes in the United Kingdom. This is value of work only, and not the value of the dyed and printed articles. These dyed and printed cotton goods are consumed all the wolld over, and the value of the exports of dyed goods in 1913 (excluding such articles as hosicry, lace, ribbons etc.) exceeded £70,000,000. These exports were sent very largely to British and other ports in Asia, where an increasing market is to be anticipated Taking the dye-consuming industries together, it has been estimated that the value of the goods made in the United Kingdom in a year, the manufacture of which involves the use of synthetic dy estuffs, exceeds £200,000,000.

The war has shown, however, that the synthesis of the war has shown, however, that the synthesis of the Marne, for it is now realised that it is intimately someonated with questions of mational defence. Our late enemies, in an attempt to recover the intitative lost at the battle of the Marne, in a position introduced a new element into warfare in 1915 by the use of a poisonous gas on the northern part of the western front. The method achieved a very considerable amount of local success, and there is no doubt that his interference are not present the new statement of present the property of present and the whole course of the war would have been changed. A new arm, however, had

besi successfully invested, and "obsculed warrare" was added to the armoundes of nations. The weapon developed as the war proceeded, and from the simple discharge of an elemental gas from cylinders placed actually in the trenches, these grew barge samplers of beampler substances, solid liquid and suscout, discharged as shells by the ordinary artillery or in special containers from special projectors. Every military requirement produced its special toxic substance and in the later stages of the war more than one half the projectiles fired were filled with chemical warfare products. This weapon, it is safe to say, will play a predominant and even decisive part in future conflicts.

The question arises: How could the Germans create and rapidly develop this new arm? The answer is because they possessed a fully developed dyestuff industry. The substances used in chemical warfare are infusately related, chemically, with those produced, in peace times, in a dyestuff factory. They are made from the same raw materials, in the same plant, by similar processes. It cannot be doubted, therefore, that the Germans were assisted, in coming to a conclusion to use toold substances, by the fact that all the necessary plant and personnel existed in their great colour factories. The great bulk of all the tools substances used by the Germans throughout the whole course of the war was produced in the dyeatuff factories, and there was the most inthinate association between the German General Staff and the managers of the factories, who were called in to advise on all matters affecting production for chemical warfare.

The dovernments of the Allies, who were forced to adopt the use of toxic substances, found themselves in an externely difficult position, for not one of them had the use of a dyestuff industry at all comparable with that of the Germans. It is true that Messrs, Levinstein Limited, in England, manufactuners of dyestuffs, rendered yeoman service, but the Allied forces were, on the whole, supplied from rapidly erected improvised plants. It is a great tribute to the energy of the Allies that they were able, in the course of so few years, to provide adequate supplies of chemical warfare substances for their armies in the field.

It is important to note that a large scale use of toxic substances in the opening stages of a campaign can have decisive results. It is not likely that any country will establish permanent themical warfare areanals, firstly because of the expense, and secondly because such a course is technically unsound. It is clear, therefore, that only a country with a fully developed dyestuff industry can conduct such large scale operations immediately after the onthreak of hostilities. Germany is the only country to-day in a position to wage chemical warfars on really gigantic scale, and nutil Great Britain possesses a dyestuff industry commonsurate with its needs, one of the greatest problems of national defence will remain unsolved. Every, support and, therefore, he extended to the new British and services, he extended to country be secure from some one of the greatest problems of national defence will remain unsolved. Country be secure from some of the country be secure from some of the time of peace and from military disaster in time of war.

#### THE COTTON INDUSTRY.

#### A Consideration of its Modern Aspects.

THE history of the cotton industry during the greater part of the present century is a subject to be studied in the light of the synchronous of European countries. In the ti-upical colonies and concurrent influence of the International Federation of Master Cotton Spinners and Manufacturer's Associations, the last Congress of British Cotton Growing Association it sent out Federation and its genesis in an act of economic content of the Private Investigation Commissions of experts to international first genesis in an act of economic international in the vegar just present growing areas. rederation had us geneas in an act of economic internationalism. In the years just preceding 1844 the great problem was the shortage of raw material, which unquestionably will be the great difficulty of the fact that a large proportion of the textile machinery on the Continent of Europe is still fall its resumption of full work will investably precipitate a raw material crisis, unless timely steps are taken to avert it

The raw material shortage of 1903 and 1904 affected The raw innersia shortage of 1965 and 1968 infection all cotton manufacturing countries, and brought the industry in Britain, and in Europe generally, to the orego of disaster it was complicated and made more acute by gambling operations on the American cotton market Lancushire spinning mills and weaving sheds were working 5615 hours per week. I was o'don't that there was not sufficient American cotton to maintain such a rate of consumption, and that in the later months of the season there would he a general stoppage of the mills.

mass meeting of employers and operatives was A mass meeting of employers and operatives was held at Manchester. Sir Charlos Macata presiding, at which a resolution was unanimously adopted reducing the working hours in the mills from 55° to 40 per week. This resolution was loyally carried out. The response gave the world a wonderful example of industrial solidarity, both capital and labour submitting willingly to the sacrifices involved Those sacrifices saved the cotton industry of the world. The call on the raw cotton market was cased, prices on the American market broke, and the amendiatives were defeated. the speculators were defeated

The cotton industry of other nations benefited, but had not been organised sufficiently to follow the lead of England. It was felt, however, in Lancashire, that the other cotton manufacturing nations should be in a better position to follow in any omergency the lead thus given Fortunately, the nucleus of an international understanding had been formed during the origin. been formed during the crisis

The mass meeting of British employers and operatives had been in telegraphic communication with Kuropean and American cotton spinners, and had been attended by a representative of the French cotton industry. So strong a reppert was found to exist that it became obvious that an international cotton trade movement could be formed, and an appeal was made to the British Government to call an assembly of cotton submers from all countries. No cotton trade moomens could be formed, and an appeal was made to the British Government to call an assembly of cotton spinners from all countries. No practical response resulting, action was taken without Government aid. The English Federation of Master Cotton Spinners' Associations, co-operating with the Swiss Association, summoned an International Congress at Zurich in May, 1984, and there practical shape was given to the conception of international cognisation. In 1995, in Manchestor, the International Cotton Federation was founded as a definite ontry, with headquarters in the city, and with Sir Charless Macara as president, an office in which he remained for eleven years. Apart from the labour question, which in each country had so many special aspects that no international body could satisfactorily cope with it, it has taken action in regard to every problem of the world's cotton trade.

In India a signal success was achieved, the cottan crop there being raised from three million to nearly six million bales in about ten years, and an Indian crop of about ten million bales had been brought well within the range of possibility when the was broke out. There was also an improvement of the world have a successful below the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the s broke out There was also an improvement of staple, and this would have been immensely helped by the project for planting American and Egyptian seed on a large tract of irrigated laad offered by the Indian dovernment This project had already advanced considerably when the war caused a temporary sether. temporary setback.

temporary setback.

The international propaganda did much to improve American cotton cultivation, and its delegations to the Southern States, to the Nile Delta and the Anglo-Egyptian Soudan—under the personal leadership of the president—gathered information of great importance The foregoing opitomises only some of the accomplishments of the Federation (before the war); its work in full is described in nincteen volumes of reports, the contents of which have been translated into all the principal languages, and laid by the British Government before the governments of every civilised country. Now that it has resumed the activities interrupted by the war, its first concern is to remove the peril, already alluded to, of snother shortage in raw material. A hopeful its first concern is to remove the porti, already alluded to, of another shortage in raw material A hopeful view is supported by the fact that, as experience shows, a great yield can be secured by good methods of cultivation wherever the climate is suitable linasmuch as suitable linasmuch as suitable linasmuch as suitable linasmuch in the world, an extension of the sources of supply should be a practical proposition. To avoid dependence on the yield in any particular quarter of the globe, steps should be a braken to bring under cultivation as many widely-distributed areas as possible Next in importance is the question of better methods in growing

Modern science provides the means, and wherever they have been adopted the plant has been responsive in the third place, the establishment of a cetten reserve, long advecated by the highest authority in the trade, is a measure of elementary prudence.

The difficulties of finance, and the relations between capital and labour, have been acutely felt in the cotton industry in secent days, and they will not be eased until a settlement on a wider basis than anthing yet attempted has been agreed upon Both are international, and illustrate the interdependence of nations and of industries Like other industries, the cotton trade needs larger financial resources than ever before, to bear the strain of vastly-increased costs. That strain on employers is internitically intensified by the demands of the employed, and it is wisely suggested demands of the employed, and it is wisely suggested that any future advance of wages, beyond what may represent increased costs of living, be in the form of a monetary interest in the industry. The adoption of this scheme by any industry must of necessity be taken up throughout that industry, or some must benefit at the expense of others. Horein is the best argument for collective against individual action. If the indicated principle be extended in its application its leads to an international standardisation of wages and conditions regulated by conisation of wages and conditions, regulated by considerations poculiar to each country

### woollen hipustries.

#### By R. TALBOT OVERTON.

RITISH woollen industries, from a remote capital source of national wealth until the development of the cotton trade towards the close of the eighteenth century.

The Colonial developments of the seventeenth, eighteenth and nineteenth centuries, with the invention of the spinning frame and power-loom. supplied an impetus that carried the trade far and quickly ahead.

The chief oversea sources of supply of raw wool are Australia, New Zealand, South America, South Africa and India; China, Persia, Russia, Turkey, Egypt, North Africa, Spain, Portugal and other countries also figuring on the list, even Iceland contributing a quota. The supplies from the East and Russia are considerable.

Woollen textiles are divided into three general classes of fabric, in the manufacture of which three principles are operative-the woollen, worsted and "stuffs "-and to a great extent these principles are localised in practice. At one time the famous products of the West of England and parts of Scotland were almost wholly those of the first-named principle, the output to-day being much more varied. While re-manufactured materials, cotton "sweepings." and "fud" and " flocks "-the wastes in the manufacture of woollens and worsteds-are used in the making of the cheap cloths of Batley, Dewsbury and the Yeadon districts in Yorkshire, nothing but the genuine material at its best enters into the composition of the unsurpassable best cloths of the "West Countrie" and certain defined Scottish areas. Leeds and its districts adhere in the main to the woollen principle. Huddersfield to the worsted, and Bradford to the "stuffs." But both Bradford and Leeds make worsted fabrics in large quantities, and Huddersfield, working in part on the woollen principle. turns out cloths with both woollen and worsted properties. The woollen differs from the worsted principle in the construction of the yarn (thread), or the arrangement of the fibres of which the threads are composed. In the "stuffs" trade cotton warps are the rule, though warps of worsted, wool, silk and linen are also in use, the wethe being usually of Botany (the original Australian variety) and English wool, mohair and wilk.

A hundred years ago the value of the woollen yarmand piece goods distributed from the manufactiving centres of Great Private washed £17,000,000, as against an average of about \$5,000,000 of late years. In 1913 our total misorts (including 122,000,000 lbs. of immorts (including 122,000,000 lbs. of imd and home product to 125,000,000 lbs. In

1914 (the first year of the war) these figures fell period in British history, remained the respectively to 855,000,000 lbs. and 121,000,000 lbs., but in 1915 the grand total rose to 1,179,000,000 lbs., of which 122,000,000 lbs, was produced at home. The weight of foreign wool exported in 1913 was 305,000,000 lbs., and of domestic 29,000,0 to lbs.; in 1914, 297,000,000 lbs of foreign and 38,000,000 lbs. of domestic, against 146,000,000 lbs. and 32,000,000 lbs. for 1915 The bulk retained for consumption was thus 804,000,000 lbs for 1913, 671,009,000 lbs. for 1914, and 1,001,000,000 lbs for 1915. The woollen yarn exported during these three years weighed 55,000,000 lbs. (1913), \$7,000,000 lbs (1914), and 17,000,000 lbs. (1915); exported measured woollen piece goods 185,000,000 yardя, 167,000,000 yards. and 160,000,000 yards. In millions of pounds sterling, the values of woollen exports of all kinds were 34.0 in 1913, 28 3 in 1914, and 81.1 in 1915.

Later statistics of the ordinary kind are wanting, and would be valueless and misleading, the trade in all its ramifications having been temporarily revolutionised by the war-time action of the Government in becoming flist-purchaser and controller.

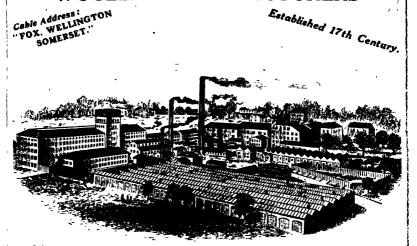

in March, 1919, Government ceased to control prices, and the following mouth commenced selling by public auction, their action reviving the London wool sales, discontinued since March, 1917. The result was an unexpected rise in prices, and as foreign competition increased the rise in fine wools became especially noticeable. Difficulties connected with transport and shortage of labour compelled the Government to let a other countries have a much larger proportion of wool than had been originally intended. The great demand for cloth made of the finest wools doubtless played an important part in the advance of value.

Last year prices of the raw material went down very considerably, prices of the manufactured article falling correspondingly. was largely the result of reduced credits at the banks, the financial crisis in Japan, and, supplementarily, the influx of long-withheld South American wools, the trade being unable financially to lift the wools marketed. This sudden drop was responsible for a less of confidence between consumer and producer, the consequence being a falling-off of new orders and a cancelling of old ones where any excuse could be found. A large increase of business is expected to follow on the restoration of sonfidence (in which connection the helpful action of the colonies is to be noted in starting the public auction of free wools), as the world's present need of woollen goods is great and

#### THE LINEN INDUSTRY.

#### By W. H. WEBB, President Linen Merchants' Association.

THE botanical name of flax is "Limin Usitatissimum" (the most useful of fibres). The first books of the Sacred Record contain frequent references to flax and linen, and all other textiles, with the exception of the products of wool, are babes in years as compared with linen

Before Moses wrote the first books of the Sacred Volume, before even the Patriarch Abraham visited Pharach, the Egyptians had attained great perfection in the fabrication of

The wonderful strength and durability of the mummy linen found to-day in the tombs of Egypt, and which must have been made at least 4,000 years ago, is striking proof of the outstanding qualities of this fibre

The earliest record we have of linea being made in Ireland dates back to the thirteenth century, and it was probably introduced by the

Norman settlers.

In fabrics for military equipment requiring the greatest strength and durability, linen has again strikingly demonstrated its superiority.

After exhaustive experiments, linen was found. owing to its great strength and durability, to be the one satisfactory covering for the wings of

aeroplanes.

For the paddings or linings of uniforms and for the thread used in the making of boots and uniforms, the demand has been unlimited, simply because it was found that linen would far outwear that made of any other fibre.

War, the great prover, has placed the superiority of linen in an unassailable position It is difficult to get definite figures for com-

parison in the linen industry, as in almost all available records flax, jute and hemp are grouped together.

Under this grouped heading the power looms in the United Kingdom in 1875 numbered 41,980, as against 54,440 in 1905, the distribution being:

Ireland. England & Wales. Scotland 5,024 18,529 1875 ... 17,827 1905 . 32,831 1 494 17,185

but for the tensons given these figures, as regards linen, are unreliable.

The principal manufacturing centres in Scot-

land are Dundee and Dunfermline Broadly speaking, the heavier, coarser linens are made in Scotland, and the medium and finer

varieties around Belfast.

Linen manufacturing can only be said to exist in England, a small section of the industry : centring around Leeds where about 600 operatives are employed

Belfast is peculiarly well adapted to be the centre of the linen trade, as the immense shipyards give employment to the men, leaving a large surplus of women available for employ-ment in the factories.

The total exports of linen goods, including flar, yarns, from the United Kingdom in 1913

amounted in value to £9,400,000.

The raw material used in the linen industry is unfortunately not a home production, with the exception of the comparatively small amount grown in Ireland. Itsels supplies the bulk, and other imports come from Holland and Belgium.

The Belgian or Courtral flax is the fluest in quality; Irish comes next; then the Dutch, Russia supplying all the coarser fibre.

Average tonnage of Flax and Tow from Tons. ll sources consumed in the United Kingdom for 10 years, 1907-1917, was . . 95,000 45 000

The supply in 1918...... 1919 - 1920 Estimated supply from all sources, including stocks in Spinners

hands 24,000 So far this is working out accurately. It is

the flax available for linen supply in 1920, and represents approximately half the amount consumed last year

It is hoped that next year the supply of raw material will begin to increase, but owing to the collapse of Russia, which country supplied 90% of the world's flax, the recovery will of necessity be gradual, and in all probability several years will elapse before a sufficient supply is again on the market.

For some time to come the cost of production is bound to be high Otherwise it would be impossible to stimulate increased sowing of flax especially when food products are proving so

remunerative to farmers.

In the Irish section the linen industry has become strongly associated. Each group, spinners, weavers, Heachers, and merchants have their own associations through which the trade is controlled and regulated. In addition there is the Research Association which is supported by the whole British industry, and the Itish section has an association in the Irish Linen Society, which carries on propaganda and generally looks after the selling end of the trade. It is confidently anticipated that the Research Association will prove efficacious in reducing the cost of production, and already the Irish Linen Society has shown that in an associated industry propaganda is an essential.

The Irish Linen Society has established a Service Bureau at No. 1, Bedford Street, Belfast, for buyers visiting the Linen Market. There a service of up-to-date information is available. A large room is placed at the disposal of buyers, a stenographer is provided, and hotel accommodation. timesportation, etc., is looked after for them

Stabilising Values —On the conclusion of the Armistice in 1918 the re-establishing of civil trade was very carefully considered by the Irish linen tende, and it was felt that until liven values were on a stable basis buying would not commence. With this in view a policy was evolved whereby on standard goods, by costing from the raw material upwards minimum prices were established, which by agreement were binding for the year 1919. The Irish Linen Society carried out the propaganda in connection with this policy, making it known far and near that the price of linen was on a stable basis, with the result that in a short time the boom commenced which has lasted up to the beginning of May, 1920. It is intended that this policy of stabilising values will be continued. When the market eventually commences to drop a periodical basis of values will be established by deliberately lowering the minimum prices step by step. The value of such a policy to every interest concerned is obvious.

# "OLD BLEACH"

#### PURE IRISH LINEN and LINEN DAMASKS

#### "Old Bleach" Pure Irish Linens

are the best in their class. Their fine durable quality and beauty of design are exceptional. They are bleached by the slow, gentle method of sim and grass bleaching. All enquiries should be made to an agency, or our London Branch.

#### "Old Bleach" Damasks.

The art and beautiful execution of their designs have rightly made 'Old Bleach' 'Damasks world famous.

#### "Old Bleach" Towels.

Like the Damasks, "Old Bleach" Towels are noted for then high quality and splendid designs. The silky beauty, softness of finish and evenness of texture are the result of many years of specialisation.

#### "Old Bleach" Embroidery Linens.

These are delightful to work upon, and embroiderers know them to be worthy of their best work. The threads are round, pull easily, and do not break.

#### "Old Bleach" Sheetings and Plain Linens.

Distinguished for their extraordinary durability and fine texture—the result of pure material and careful weaving.

# VELVET AND CORDUROY INDUSTRY.

ELVET probably made from cotton was reaving the waits in the shape of thitts of produced by the Chinese at a date remote from the Christian Era. From this interesting people the textile arts slowly crossed then civilised Asia, encountering the conquering Romans in their Bastern raids.

Later on the great Crusades period distributed the knowledge, bringing these arts into touch with the lesser developed Western World.

Velvet's peculiar properties appealed sac cessively to the rulers of Imperial Rome, to ecclesiastical adornment, to the display of the

age of chivalry.

Through the Italian Republics its manufacture passed on from Venice and Genoa, north through Lyons and France to Flanders, where now desolate, but then thriving Ypres manufactured, as did other cities of the Spanish Netherlands, velvets and fustians. Is Moories Spain west pile velvets were made at Gianada, and from Barcelona, always a textile centre, crattenen probably reached the scaport city of Antwerp.

Religious persecution, and the capture of that city by Parma, caused weavers to flee to England, where, settling in Manchester, they assisted the development of velvet and fustian.

This, the parent of modern cotton velvet and its family connections-known in England from early times-was originally made from coarse wool or combined with linen warp. Then (as now) employed for rough hard work, sumptuary laws settled its place and that of velvet. Chaucer and Shakespeare both refer to it, and our national poet quotes velvet for his knights and dames.

By 1641 Manchester had a reputation for its fustions, Cyprus and Smyrns cottons now replacing the one-time linen warps from Ireland, and being chronicled as exporting them to the Continent and America. The subdivision of production was a feature in those early days -the grey pieces were brought into Manchester, and the dyeing and finishing carried out by the merchants even at that distant period.

From this parent fabric were velvet and corduroy evolved, but even to-day fustian covers the various subdivisions into which cotton pile fabrics may be roughly classed - velvet. velveteen, cord, moleskin, beaverteen, imperial.

diagonal, etc.

The industry is a little world within the greater world of the Lancashire cotton trade-subdivided, specialised, highly technical. The rrey material is woven mainly in Oldham, Preston, Bolton, and points in East Lancashire, and subsequently focussed in Manchester, where the merchants who place the completed fabric in the markets of the world arrange the numerous operations contributing to the successful production of the finished product

as we see it in velvet and cordurey.

High-class yarns are required for wearing velvet—fine Egyptian for strength in the warp, and soft silky American of long staple for the

west, suitably spin to give the velvety touch.
Cutting the pile of this grey material is a very interesting operation, calling for much dexterity. After stiffening and liming preparation, the work consists in opening up the longitudinal tunnels or "races" into which the cloth is woven by means of a fine steel knife

standing These tufts form the velvet.

Perfect grade cloth is needed, free from imperfections, as these would doffice the knife rapidly pushed forward by the walking operator, and damages would result. Inventors have long sought to replace the skill of the human hand by mechanical means, but only in recent years has an ingenious machine been put to work which performs the cutting well. So fine are the "races" in the better qualities as to be invisible to the ordinary eye and only discoverable by the trained dexterity of the pile cutter Once a domestic industry, it is now carried on in well-organised mills in the country districts of Cheshire and Staffordshire.

When the pile has been produced, it has to be manipulated with brushes, shorn, singed and made of smooth surface for dyeing. Careful workmanship is required to produce the "fast dye" and the kindred operations of obtaining the lustre and high degree of finish to which the silky grades of velvet cotton lend themselves.

Standardisation, however desirable, hardly suits the velvet business, as the world's requirements, from the Arctic Circle to the Southern Cross, call for qualities of varying degrees of fineness, weight, quality, style. price, etc., complicated by economic or fiscal barriers, and although the Home Trade is a large consumer, probably 80 per cent. of the velvet production is exported.

A brief survey of the various branches includes the corded velvet, an excellent fabric, emmently suitable for ladies' costumes and ideal for children's wear, and in white etc, washing well, if a few simple instructions are followed

Beautiful varieties of printed, figured, striped, brocaded velvets, acid printing and shot effects. are produced, and a growing trade is done in velvet ribbons made from various grades of cotton velvet. Handsome shoes are made from . cotton velvet and slippers of all grades

Juvenile clothing finds nothing equal to velvet, and corduroy gives splendid results in hard wear

for the rising generation.

Corduroy may be briefly described as velvet made with coarser, cheaper yarns, in stripes or ribs of almost infinite variety, from the thicksett, with a dozen ribs to an inch, to the cable cord of almost an inch to a single rib It is a wellproved article of great utility, and garments made from suitable qualities give endless wear and satisfaction to the user. A few of these would include rural Britain, the navvy, the ironworker, the constructional gangs of North America, the South African farmer, the Austra-lian stockman, French and Belgian peasantry all these workers te-tify to corduroy fabrics

In spheres as diverse as Alpine sports and the hunting field, their worth is proved. British and Allied War Departments discovered during the War what an unequalled material for hard wear was furnished in good quality corduroy. Furniture manufacturers and upholsterers have found what scope corduroy, in its beautiful colourings and high-class designs, offers for house adornment. The Manchester manufacturer, in the past an individualist, now realises that cooperation in some departments will help him to sheathed in a long finely-pointed guide which place effectively before the world the excellent opens up the "race," enabling the sharp edge qualities of the various cotton pile fabrics so of the knife to sever the top of the tunnel, well produced in that busy city.

#### LEATHER INDUSTRY.

#### By Dr. J. GORDON PARKER,

#### Principal of the Leathersellers' Company's Technical College.

THE Leather Trade is in magnitude one of the most important of Great Britain's staple industries, and at the same time the manufacture of leather is one of the most ancient crafts.

The origin of tanning is lost in antiquity, but specimens of leather exist in our museums which were taken from the tombs of the Pharaohs, showing that good leather was manufactured, and even excellently dyed and finished, some four thousand years B.C Probably no important industry has undergone so little change in the essential principles as the "craft" of leather manufacture or ancient art of tanning. Even in this twentieth century the general outline of tanning is almost identical with that used by our forefathers before the Christian era, in that the basis is the hide or skin, and the tannin ingredient is still obtained from the barks and fruits of trees as of old

In the reign of James I we read of laws being passed restricting a tanner in the production of leather and rendering him liable to heavy fines and imprisonment if he attempted to accelerate his process under the normal number of years required to produce what was

then considered a good sound leather.

One of the earliest forms of tannage was the oil or smoke tannage, which consisted of rubbing the raw skins with soft fat, and afterwards exposing them to the smoke of green wood, somewhat similar to the process still used by various Indian tribes In the production of vegetable-tanned leather, the modern leather manufacturer has to thank the explorer and scientist for the great progress which has been made during the last two or three docades. Where oak bark was looked upon as almost the only source of the tannic acids, other barks, fruits and woods, much richer in tanning properties, have been discovered and are now in daily use. Their introduction has cut down the period of tannage, which was formerly years, to months and almost weeks, and not only has it been discovered that these newer materials from different parts of the Empire are richer in tannin, and therefore quicker in their action, but that judicious blends of certain of these materials produce even a superior leather to that produced by the use of oak bark alone

Towards the middle of the nineteenth century the introduction of myrabolams from India and valones. from Asia Minor began to have its effect on our Wattle back from Australia and Africa, industry and many other materials, all have tended to build up

the reputation of British-nude leather.

In the early seventies a French patent was taken out for the extraction, concentration and decolorisation of tanning extracts, and there sprang up, first in France and Hungary, and afterwards in USA, factories where the oak and chestnut wood was extracted in close proximity to the forests, and under scientific principles concentrated in the form of liquid or solid extract containing 25 to 60 per cent. of tannic acids ready for direct use in tanyards. The introduction of these extracts had a marked effect upon the tanning industry, reducing the period of tannage, and producing a leather of equal quality at lower cost

and producing a feature of equal quantity at lower cost.

Each of the various tanning materials possesses cortain characteristics, and the art of tanning high-grade leather depends on the knowledge of how to blend these materials, and at what stage in the process each should be used in evident of give the best results for the various purposes for which the leather is required

Our tanucties are converting ever one hundred and seventy thousand hides per week into heavy leather,

of which number only approximately fifty thousand hides come from our own native cattle. In the lightnices come from our own native cattle. In the light-leather industry, excepting for our own supply of sheep and calf, some millions of skins have to be imported for the manufacture of upper leathers for boots and fancy leathers for upholstery, bookbinding, purses, pocket books, and other similar articles

GLOUE LEATHER.—The glove manufacturers of Great Britain have had a reputation for the production of high-class glove leather of the heavier grade, suitable r the manufacture of men's gloves-this product

being made from Cape sheepskins

In the manufacture of lighter fancy gloving leathers, the manufacturers of this country had not, up to the commencement of the war, been able to compete with commencement of the war, ocen note to complete with Continental importing houses for these more artistic productions. Great headway has to be reported in this branch of the industry. The production of fancileather for ladies' gloves, both in glace and suede finishes, has made very considerable headway, and these products now compare favourably with the best quality imported leather, and in many cases, show considerable intercompare favourable. onsiderable improvement.

White "washable" glove leather is a British production which has created a great demand, owing to its property of being washable, which operation can be carried out many times; gloves made from this leather thus being economical in wear.

LEATHER FOR ARTICLES OF WEAR -During the last year, leather has been more generally adopted as an article of personal attire. A large number of ladies hats are now being made of suede leathers and this and other leathers are also being employed to a very con-siderable extent as trimmings for ladios' dresses One of the most recent innovations has been the manu facture of ladies' jumpers. It would appear that this material dyed in tasteful shades of colour is likely to become fashionable.

become fashlomble.

Light AND FAKO: LEATHER—The manufacture of leather from the skins of sheep, goat, calf and seal, as used in the fanny leather goods trade, has long been a specialised branch of the leather industry in which Great Britain excels. The tannings of these goods is, in the main, confined to the use of shunac, a tanning material imported from Sielly. This tanning agent is particularly sul able because of its light colour, thereby enabling light and fancy shades to be dyed on the tanned center, and because of its wearing properties. The British dyer has a reputation for the production of leather which has been coloured in "art" or fashlonable shades, and now that British dyes are available in increasing quantities, the trade is rapidly recovering from the set-back which it had during the war period caused by the patriotism of the fancy leather manufacturers employing their energies in the production of boot and equipment leather required production of boot and equipment leather required by our own and allied armies

CHROMF TANKING -In 1881 the first patent was taken CHROWF TANNIN — In 1881 the first patent was taken out for the production of mineral tanned leather by the chrome process. This method, which consists of impregnating the fibres of the raw skin with chromic acid, which is subsequently converted into chromic wide, results in the production of a leather which, when properly manufactured, is superior in wearing proporties to that which is vegetable tanned, and reseases the additional property of believe to the consession. possesses the additional property of being waterproof and of lighter weight, and when manufactured into and of inginer weignts, and when manufactures much boot-upper leather, of smarter appearance. The process of chrome tanning is very rapid, it being possible to convert raw pelt into leather in as short a period of time as three to four hours, although a much longer time than this is given in actual practice. Great processes has been made in the obvoing tanning industriations. gress has been made in the chrome tanning industry. British manufacturers were at first slow in taking full British manuscurrer were at his slow in taking full advantage of the newer process, but the development of this industry during the war and since the armistice has been such that when the factories at present under construction are completed, the British shoe manufacturer can be practically independent of foreign supplies; whereas six years ago, probably 50 per cent. our requirements were imported.

#### BOOT AND SHOE MANUFACTURE.

THE machine-made footwear of to-day is in the direct line of succession from the primeval sandal, a covering for the sole of the foot made of plat ed grass, palm freeds, skins of animals, and other material—still in common use among Oriental reces. From this form of pedal protection, obviously inadequate in many weathers and colder climates, early progression was made to a rudely shaped shee of a single piece of untauned hide, laced with a thong, and thus a complete covering. From these two forms—acclessible to perfected shee and boot, combinations of both.

Until the last decade of the eighteenth century boot and shoe making was solely a handicraft. Their manufacture by machinery originated in the invention of the sewing machine, the first patent for which was granted to an American in 1790. The development of the industry under review synchronised with the improvement and development of the sewing machine. Although designed for the boot and shoe trade, this most ingenious piece of mechanism proved more quickly practicable for other than that trade's uses and special requirements, to adapt it for which was the work of time and a number of inventors, of whom one was the great English engineer Brunel. The chief difficulty was in mechanically fastening together soles and uppers. This overcome, the American enterprise of boot and shoe making went ahead, and when the Civil War broke out the needs of the armies gave it a great impetus.

When, some fifty years ago, British makers awoke to the fact that the day of the hand-made article for the general public was over, and that they must either adapt the new methods or go under, they found the Americans in control of the necessary plant. The English branch of the United Shoe Machinery Company of Boston had a practical monopoly of all the required mechanism, the acquisition of which by their British customers was rigidly conditioned. The vendors reserved the power to remove the equipments with which they had furnished it from any factory introducing other than their own machinery, mostly imported from across the Atlantic. For long the British n.anufacturer of boots and shoes, and the British manufacturer of the machinery he needed, were thus handicapped, but the Patent Act of 1907 prohibited this power of confiscation, and brought to both-and to many others-the benefit of a clause making revocable the patent rights granted to any invention not used for manufacturing purposes "to an adequate extent" in Great Britain. When once he had a fair chance the home manufacturer made good with certitude and celerity, demonstrating that on any- water and damp proof.

thing like equal terms he had nothing to fear from his American rival, notwithstanding the latter's long start in advance of him. To-day the output of the British factories is enormous; and as regards quality it is significant that the British armies, marching on British-made boots, were the best shod of all the combatant forces engaged in the Great War. Even in the heyday of American superiority—now irrecoverably lost—there was a grade of leather that the American maker had to buy over here, sending it back to us in a portion of a certain class of his goods.

Our principal centres of manufacture are Northampton (at the head of the list), Leicester, Stafford, Norwich, Bristol. Limithnow and May-bole. At a typical large modern factory in any of these and other places the daily output is to be reckoned by thousands of pairs. In the matter of leather, supplies from native resources are supplemented by imports of hides from South South Africa, America and remotes Machinery dominates the operations lands. from first to last. Even the surface measurement of the hides, always very irregularly shaped, is ascertained with mathematical exactitude by means of electrically moved mechanism. Clickmg-the cutting out and shaping of the material for uppers-was still done by hand until some ten or twelve years ago, but the clicking machine is now in general use—From the department in is now in general use which it operates the shaped pieces go to the making-up department, the principal feature of in hundreds—is that all-important sewwhiching machine which it took so long to perfect for the purpose it here accomplishes Various more or less intricate processes precede the bringing together of the uppers and the soles and heels to which they are to be attached. the case of all weited boots (a term which excludes those for very hard and rough wear), what are called pulling-over machines bring the upper over on to the insole and tack it to keep it in its place, the heel being drawn over by hand. The work at this stage is completed by an implement curiously named a "ingger." stitching of the welt. and upper to the insole is done by a developed form of the Goodyear welt machine patested in America as leng ago as 1862. The outer sole, having been shaped and (by a solution of rubber) fixed, is stitched on to the welted boot by a lock-stitch sewing machine fitted with an awl which pierces the needle-Like so much of the other plant, the machine that nails on the heels is automatic in its action.

At many other stages, both before and after those at which we have glanced, modern boot manufacture is richly illustrative of the fact that modern needs are best and only to be satisfied by uname of modern applied science. It goes without saying that, in so far as their shape is similar, shoes are made on similar principles by similar or the same mechanism.

Inventiveness is still at work in the industry, and it is claimed for a boot lately put on the market that it is absolutely and unconditionally water and damp proof.

# Quality Footwear

# The Marric's

#### THE BELTING INDUSTRY.

trade barometer, for its activities afford a reliable index of the condition of trade generally, both at home and abroad. Belting plays an increasingly important part in the transmission of power in engineering shops, ship-building yards, textile factories, and power stations, while it is also largely used in collieries, mining and railway works; thus a brisk demand tor belting is a sure indication of expanding manufacturing industry. British producers of belting enjoy a reputation which is world wide. due not only to the excellence of their belting. but also to the fact that they have made an exact science of the problems involved in the economical and effective transmission of power. They are always willing to advise potential users as to the most suitable belts for the work to be done, and also as to their practical application and arrangement. This has resulted in a world-wide demand for the British article; for whether the belts be of leather or of cotton or other materials, it is recognised that there is a strength and durability about British belting which much of that manufactured abroad does not possess. Our climatic conditions may have something to do with this superiority; but an equally if not more important factor is the fact that we are an old-established manufacturing nation, and hence have long been engaged in solving the problems attaching to power transmission. This long experience, backed by high reputation, has ensured marked success in the world's markets generally. At present our manufacturers have not overtaken the unmet demands of the war period, when all our output was required for munition. motor, aeroplane, or other works, and there was little or nothing for export.

France and Belgium are making strenuous efforts to reconstruct their factories and their industries, and are relying upon British manufacturers for their belting. There are also arrears of orders to be executed for South American States, South Africa, and to a still greater extent, for India. Our Indian dependency is now one of the world's most important cotton-spinning and jugations in the indian and caylon tea fibres of the supply her with the enormous quantities of belting used in her textile factories, and are fibres of the landian. The requirements of the Indian from "stretch."

IR British belting industry is a good markets are somewhat exacting, and one famous firm of manufacturers who have been close upon ninety years in the bufiness have made a special study of these, and maintain big stocks specially manufactured and prepared to meet the exacting climatic and other conditions of India. Of all beltings. the most serviceable, efficient, and also the most costly, is leather, and when the enormous amount of leather belting in service is considered, some idea can be formed of the importance of the belting industry. firm alluded to, whose works are situated in Glasgow, and include no fewer than eighteen departments, have a tannery in the Highlands which deals with 100,000 hides per annum.

> Although this may seem a big number, it should be remembered that a large motor or other engineering works may easily have 25 or 30 miles of leather belting in operation in their various shops, representing, if only the prime portion of the hides-the buttsare used in its manufacture, the skins of 1,000 or 5,000 head of oxen. Approximately a first-class hide only yields about 16 square feet of leather for the best quality of belting. and this is curried under high tension and allowed to dry under "stretch." The tensile breaking strain of 1 square inch of British leather belting made from selected hides and specially tanned is over 9,500 lbs. Such belting is admirably adapted for main driving, electric motors, and other fastrunning machinery. Dynamos run with it. and feeding incandescent lamps with direct; current give as steady a light as when fed with accumulators. Main driving belts can be made up to 12 feet in width, and a main driving double belt for 800 horse-power has been made. This belt was 140 feet long and 60 inches wide.

Of late years a type of textile belting which has come to the fore is that which is known as Balata belting; for this it is claimed that it is the strongest of the textile varieties. It is made of special hard-woven, long-staple cotton canvas, bound together by an indissoluble mixture of "Chonata," which is composed of guttapercha, balata, and other gums, which are so applied that they permeate the fibres of the canvas while in a state of high heat and tension. The result of this treatment is a flexible belt which is impervious to moisture and is almost immune from "stretch."

Belting

IS RELIABLE UNDER EVERY CON-DITION AND IN ALL CLIMATES.

JOHANNESBURG

Te are sole manufacturers of the following well-known brands. which are each suitable for their specific purpose:

"COLUMBIA" Leather Belting.

#### GLASS BOTTLES. By J. MANDEFIELD

THE making of glasdis not a modera disordery of and undoubtedly was highly developed in very early uses. So far hack as 2,000 years lefore (Thrist we have evidence that glass making was practised by the Egyptians, the knowledge ultimately passing from them to the Romans. It is also will known to have been a flourishing art in Venice and district in the Middle ages of the control of the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second th

were bottle factories. In 1728, owing to the prosperous conditions of the industry, an excise duity was imposed by the Government on gloss manufacture, and although I would appear that owing to the exorditant intime I would appear that owing to the exorditant intime that in 1846 the production of class, bottles in Great Britain amounted to 232,574 exts, or which no less than 232,887 cwis were exported. The tax above reforred to was repealed in 1845, from which time the glass bottle industry has grown to very large dimensions, farming to-day probably the chief portion of the British glass industry, which it may be stated compuses in all sween distinct sections, producing glassware of various types. The production of bottles may be broadly distinct sections, producing glassware of various types. The production of bottles may be broadly distinct excitant, and the latter from large can be even the containers and the color of the form furnaces containers. The former are usually used in the two classes. On the color of the containers of the containers from the production of "white" bottles and containers from tank furnaces (which has in the past presented many technical difficulties) is making considerable progress, however, and there is no doubt important developments in this method of production are likely to take place. In view of the extended use of machines for bottle making, progress in tank working is. important developments in this method of production are likely to take place. In view of the extended use machines for bottle making, progress in tunk working is of great importance, as it cassues the maintenance of continuous supply of molten glass at the same level in the furnace, so long as the tank is in Operation, thus acultive the operation of machines. This continuous supply of glass is possible owing to the fact that ran materials for the making of glass are regularly fod into the tank at the melting end, and after fusion the molten glass gradually passes to the working end, where bottle making can be carried on without interruption. Bottles are still largely produced by hand methods. Usually a gaug numbering five workers, termed a "chair" or "hole, consisting of the following men and how working bogether: gatherer, blower, wester off, make, and taker in.

and taker in.

working together: gatherer, blower, wetter off, maken, and taker in.

The wester off and taker in are usually boys. The process of bottle making is briefly as follows. The gatherer collects from the furnace on the end of an Iron blow-pipe a quantity of motten glass which he rolls and shapes on an iron or stone slab called a "marver plate". The blow-pipe with the glass has been proved the property of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the plate of the p

was scalingly at an early duty that full the sulk presential, and from its introduction may be dated the most important stage in the development of the mustry

servinction of the theorem of the continuous of the most important stage in the development of the moustry. Commencing with the year 1875 many machines designed in both Europe and America with the object of making bottles have been exploited, a number of which have proved more or less efficient. These vary to a very considerable extent in the amount of human labour necessary for their operation and may be classified as a long to the considerable extent in the amount of human labour necessary for their operation and may be classified as a long to the considerable extent in the amount of human labour in the substitute of the considerable with the structure of the considerable example of an absolutely automatic machine a cotable example of an absolutely automatic machine a cotable example of an absolutely automatic machine a cotable example of an absolutely automatic machine a cotable example of an absolutely automatic machine a cotable with the exception of mechanics to regulate its running. On the latter types of this machine bottles are being produced at the rate of thirty per minute, the muchines running continuously with the exception of breaks necessary to change module overhand working parks, etc.

\*\*Surther development in machine of machine holes of comment in the context of the glass transfer of motten grant of the glass transfer of motten grant of the glass transfer of motten glass of predetermined weight of the Owen, and for which a great future is claimed by many people in terested in glass manufacture, is what is termed the "flow food of the place of the glass transfer of motten glass of predetermined wight are gathers" are immediately delivered directly into the mothes of automatic forming machines placed along one gathers of motten glass of predetermined with the complete the operation of making bottles. The design is generally such that one feeder can deliver "gathers of glass simultaneously to several forming machines, rendering it possible, paviding the weight is equal, to make bottles and contai

O'nell, all of which have proved very efficient in the production of bottles and containers no which they were designed, and are being adopted to an increasing extern with great-ripidity.

Daring the war the importation of glasswate was practically suspended, and British manufacturers of glass bottles quickly realised the urgent need for not only greatly improving and modernising, but largely in creating their factories and equipment if they were to take advantage of the opportunity offered to supply a larger portion of the enormous demands. To achieve the continuous of the continuous content of the content of the enormous demands. To achieve the content of the continuous content works and the creation of new works and methods and included in the content of those types of bottles required in bulk. These changes involve the outlay of very large sums of money and also a considerable period of time for their completion, but they will undoubtedly play a supreme part in assuring to this country in the future the supply of a much larger proportion of the almost unlimited world demand for lottles and glass containers.

The following statistics show the expents of glass bottles from the United Kingdom to all sources at intervals of deen years from 1830 to 1935, together with figures for the year 1936.

YFAR	QUARTITY	VALUE
1853	457.787 cwts.	4348.458
1863	614,561	312,686
1873	907,680 ,,	461,918
1888	749,187 .,	356,496
1893	639,209	305,781
1903	898,958 gross	443,783
1913	974,465	605,847
1919	975 159	949 000

imports at intervals of ten years from 1893 together with the year 1919 were as follows:—

	QUARITIT.	VALUE.
1893	821,795 gross	£425,955
1903	1,831,665	789,065
1913	1,923,571 ,,	814,923
1919	929,855	946,492
	 A	41-4 41-1

It will of course be understood that the imports and exports for the year 1919 were largely affected by the shortage of labour, raw materials, fuel, transport facilities etc, and they cannot be regarded as representing the normal situation.

# ENGLISH ESSENTIAL OILS. By C. EDWARD SAGE, F.I.C.

**FOLATILE** OILS, or essential oils, are the bodies to which so many flowers, leaves, spices and woods owe their distinctive odours. The scent of lavender, the flavour of cloves and the odour of sandalwood are all due to the presence of volatile oil in their structures. The method of collecting sufficient of the oil to use, or handle, consists of heating the requisite flowers, leaves or plants in a current of steam, then condensing the steam and collecting the oil which separates from the water. This process, now commonly called steam distiliation, is almost as ancient as civili-ation and like so many useful arts, it was brought from the East to the Moors, who crossed to Spain and so spread the knowledge to southern Europe The art was chiefly applied to the preparation of sweet smelling waters and cordials, and as the use of these increased, so it became necessary to cultivate the plants which yielded the volatile The monasteries were famous for their physic gardens and herb growing, and used their products for treating human sicknesses and the preparation of elixirs and cordials; we have reminders of these early times in the form of "Benedictine," "Chartreuse," "Crême de Menthe" and "Anise" liquenrs; but to-day the herb gardens are only associated with such things as mint, thyme, and sage, yet they were really the forerunners of the large herb-growing farms which are devoted to the cultivation of medicinal and aromatic herbs to-day.

The apothecaries of a century and more ago, either prepared for themselves or bought from the growers and distillers, the essential oils for use in medicine, and as the work of the apothecary became gradually merged into the practice of medicine and pharmacy, so the art of preparing essential oils became the prerogative of the drug grower and oil distiller. As typically English products we have a world wide reputation for the oils of peppermint, lavender, rosemary, caraway, femel, clamomile, and dill for all these are native plants, and the two first named are still so famed that they always fetch a least three times the price of any other foreign grown or distilled oils.

Surrey was, formerly, the county where most of the peppermint and lavender were grown, and "Mitcham olls" still persists as a title although the districts of Mitcham, Beddington and Carshalton have long been given over to the hands of the estate agent and house builder. The herbs are still cultivated in Surrey, Kent, Suffolk, Hertfordshire and Lincolnshire, and the closest attention is given to the production of the purest products.

Although the oil glands in the plants are almost too minute to be perceptible, yet the essential oils produced in Eugland amount to many thousands of pounds annually. This means organization on the highest scale, and, by means of the expensive equipment of a modern distillery, tons of herbs are daily handled and the resulting oil is made ready for commerce.

The English herb season is very short, and so the large equipment of stills has to be utilised during the greater part of the year for distilling other products.

The aromatic spices are chiefly of tropical and subtropical origin and in order to produce the volatile oil from these, they are shipped to this country from the places in which they grow and the English distillers extract the volatile oils in this country.

In this way the English factories yield us the oil from almonds, cloves, cinnamon, nutureg, allspice, caraway, dill, and fennel, besides numbers of others employed in medicine.

It is not always possible or profitable to produce all these oils in England, but they are rectified, if necessary, on arrival from abroad.

For instances: the eucal ptus trees are natives of Australia and the leaves are distilled on the spot, the oils are shipped to this country and seldom need redistillation.

Citronel'a and lemongrass oils are distilled in Ceylon, Burms, and the Straits Settlements Star amse, and cassis oils are produced in China; wintergreen oil in the United States; lemon, orange, and bergamot in Italy and Sicily.

Now the shipment of these oils to England, and their sale, meant, until recently, that they were distributed by the merchant to the consumer, but during the last decade or two it has been found that the volatile oils can serve markind in many other forms than in their raw or refued state, and to-day many of the essential oils are simply the raw materials for the manufacture of more complex substances which are used in flavouring foods, preparing perfumes, or the manufacture of medicinal substances.

At the present time the humble clove is the starting-point for the mann-acture of the attributed in chocolate and foods. Some English distillers produce and sell clove oil by the ton, from which chemical treatment yields first eugenol, and finally vanillin.

The lemon grass oil, above mentioned, vields a substance known as citral, from which the body monone is produced, and that, with the product distilled in England from orns toot, gives us the violet perfumes for which our English makers have no equal

Otto of rose is naturally associated with a sunner climate than our English one, but an artificial rose oil is produced by the chemist with the geraniol from citronella oil as a

starting-point

The distillation of essential oils is an English industry which has stood the test of time, nothing but the best has survived the competition of cheaper and inferior products, and to-day our few factories have a reputation which has only been acquired by long years of painstaking work. The industry requires the supervision of highly trained chemists and engineers, it requires a small army of workmen and mechanics: it gathers its raw materials from every country in the world, and many of the ablest business men and merchants are engaged in it.

Although their origin is lost in antiquity the processes of manufacture are as up-to-date as modern science can possibly bring them, and if two thousand years have passed since 'myrrh, al es and cassia" were used to produce sweensmelling garments, yet the production of essential oils has only been brought to its present state by conscientious work and research through the centuries by painstaking workers, who have had but one ideal, viz., the "PURITY OF ENGLISH ESSENTIAL OILS."

#### BRITISH BRUSH-MAKING.

#### By T. MARSON TILL, Secretary of the British Brush Manufacturers' Association.

"HERE is hardly a household, factory, work- [ shop, or institution that exists where brushes of some kind or other are not -yet few people seem to know how or of what brushes are made.

It is perhaps little known that the bristle used for brush-making throughout the world is grown on the semi-wild boar in Russia, China, and India. Although bristle is the most important

material used in the industry, brushes are also made from the hair of the horse, bear, goat, badger, squirrel, sable, and other animals—from fibre from the Mexican alse tree—from plassava (bass), kitool, cocoa, and other fibres from various tropical palms.

The manufacture of brushes is divided roughly

into five branches :-

1. Brushes "drawn" with wire or thread.

2. Painting and shaving brushes

3. Brushes and brooms set with pitch, etc. 4. Twisted wire brushes for flues and bollers

5. Ivory and bone hair and tooth brushes. WIRE-DRAWN BRUSHES.

Include tollet, stable, and household brushes, such as scrubs and shoe brushes.

Tufts or knots of bristle or hair of double the length required are placed under loops of wire. which are passed through holes in the back of the brush and then drawn back with the bristle, thus bending them double and causing both ends to stand upright together. On the back of the stock is now glued and screwed a piece of decorative wood to cover up the wires and hent tufts showing through. The brush is then finished and polished.

Some of the commoner sorts of "drawn" brushes are made by plugging the "knots" with staples into the board by machinery, and this process has considerably developed during the war.

PAINTING AND SHAVING BRUSHES.

There are two classes of painting brushes—those for painters and decorators and those for artists. Before painting and other bristle brushes can be made, the bristle, which is the most expen-sive part of the brush, has to be sorted and "dragged" into certain lengths from the raw bristle, washed, mixed, and tied into knots of required sizes and stiffness, so that the bend of all

the bristles faces inwards, and the flags form concentric rings. The buying of suitable bristles and

these operations require much skill and training.
The knots of bristles when so finished are concentrated at the roots, and are bound on to the nandle by string or wire, or are driven into a source. A new process under which the roots are set in valcanised rubber is being developed with success.

Aitists brushes are made from hair taken from the tail of the sable, marten, kolinsky, and squirrel, and also from bristles. They are set in quills of various sizes, or in metal. The work is chiefly done by girls. The firms in England who specialise in artists' brushes are

few in number. Shiring brishes.—The hair from along the middle of the back of the badger is the best hair from which these brushes are made. Goat hair and brishes are the used and made to imitate

badger, and unless the brush is stamped "badger hair" it may generally be taken that the brush is made of a mixture of hairs. The best badger hair is worth to-day about 300c. per lb.

BRUSHES AND BROOMS.

An entirely different process, known as "setting," is employed in the manufacture of these

A knot of hair, fibre, or bristles is taken and the root end dipped into boiling pitch, bound with a thrum, then dipped again and inserted into a hole already bored in the wooden stock, a slight twist being given in the process to splay the hairs.

TWISTED WIRE BRUSHES FOR FLUES AND BOILERS.

These are chiefly made by special machinery. IVORY AND BONE HAIR AND TOOTH BRUSHES

This is a distinct branch of the trade, although most of the hrushes come under the heading of "drawn" work.

Bone pail brushes are almost now entirely

superseded by wooden ones.
Although the antiquity of the brush trade itself is not very great, the following early references to brushes are on record:—In the year 1877 A.D., "or wyped to (a coat) with a brusshe." In the year 1519, "Olde men brusshed theyr dustye clothes with cowe tayles: as we do with hear brusshes." The painting brush used by artists is probably the oldest type of brush. The few hair brushes that were made 120 years ago for the toilet were constructed on the principle upon which the modern broom is made—that is, the hairs were set in with pitch.

In the cheaper and commoner kinds of brushes foreign competition made some headway prior to the war, but in the better class of goods the

British trade has always more than held its own. Statistics give the following values of the trade -

	Imports.	Exports	Re Exports.	Home Tracle
1000	£	£	£	
1907			-	1,826,000
1918	456,141	237,812	22,157

First 9				_
months,	715,785	899,598	Not yet	kn <b>ow</b> n.

In the year 1908 the British Brush Manufacturers' Association was formed, and now has a membership of 135 of the leading manufac-

turers in the country.

The Scottish, Irish, and Northern Counties
Brush Manufacturers' Associations, and Master Bone Brush Makers Association, representing 112 manufacturers, are affiliated to the B.B.M.A., which thus represents 227 brush manufacturers.

The Association has standardised the stamping of brushes as to weight and material used, and has established the difference between bristles and hair—bristles now being strictly recognized in the trade as only the hair of the log, pig, or boat.
The Government and Municipal hodies recog-

nise the Association as representing the Trade.

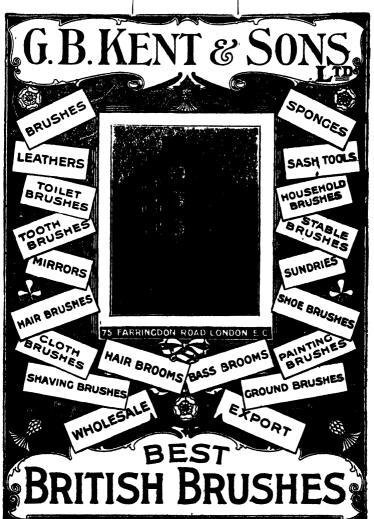

A Trade Board consisting of 14 representatives from the B.B. M.A., and 14 representatives from the trades unions concerned, has now been the trades unions concerned, has now been that blished to settle minimum rates of wares for the trade and other matters appertaining thereto.

### MAP, GLOBE AND CHART PRODUCTION.

antiquity whose geographical knowledge ex-tended beyond the limits of their own country. Their annual survey of the Nile after its periodic inundation laid the foundation for an accurate knowledge of Roypt itself, which was further fostered by the priests, among whose sacred books were three devoted to the study of astrology, surveying and geography Within their geographical horizon were probably the whole of the Mediterranean shores, regions to the east of the Tigris, the mountains of Armenia, and perhaps to the mearest frontiers of India. It is to the Hebrews, however, that we owe the three oldest of early geographical records The ethnographical table in the tenth chapter of Genisis is the first known attempt to classify the races of mankind; the description of the march through the wilderness is the first itinerary we possess; and it is a safe assumption that some kind of topo. graphical map must have been the basis for the division of the Promised Land. The Phosnicians learnt much on their trading voyages, but many of their discoveries were lost to posterity in the fall of Type and the distruction of the Carthaginian records, and to the Greeks, of all peoples of antiquity must be accredited the greatest extension of geographical knewledge. Homer has been described as the father of geography, and his conceptions of the universe held ground for hundreds of years, the wider and more philosophical views that eventually supersoded them being the fruit of Grecian com-

niercial interprise and colonial expansion.

About the beginning of the 5th century (s.e.) we find the geographical knowledge of the time embodied in a map-the first Map of the World that of Anaximander of Miletas (910-547) Of this was the bronze tablet of Aristagoras, on which were engrassed "the whole circuit of the earth, and every sea and all rivers"; the maps of Democrites, Eudoxus of Chidus, and even of Hecatseus, appear to have been but "new and revised editions." Passing over much that in anything like an exhaustive review would call for note, we come to the work of Eratosthenes of Cyrene, born a.c. 276 The attempts and achievements of Eratosthenes in the measurement of the earth would by themselves entitle him to be called the founder of scientific geography. His map represents the first application to cartography of His map scientific principles, and is an important landmark in the development of map-making. His cartographical labours were completed by Hipparchus, the astrono mor, whose idea of constructing a map of the world in which latitude and longitude should be laid down as determined by astronomical observations was afterwards in part realised by Claudius Ptolemy, whose maps and geographical treatises are his monument for all time.

Proceeding somewhat abruptly to the Christian era, the lost geographical love of the ancients was revived by the Araba, to whom is also to be accomisted the adeption of the Chinese invention of the compass

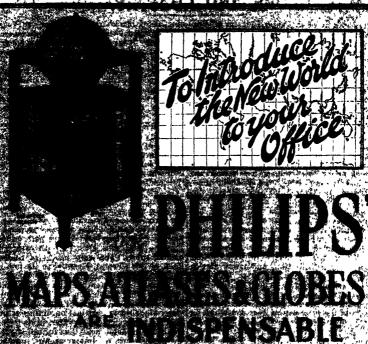

which is first mentioned among European writers by an Englishman, Nockam, at the end of the twelfth century. Chart and map production quickly responded to the immense improvement in navigation effected by its use and the adaptation of the astrolabe to marine requirements. For medieval cartographers Ptolomy was the great authority, his work being

HE Egyptians were the first civilised race of widened. The most accurate of the medieval mans were the Portolani, compiled from compass bearings, As surveys of the earth's surface grew in number and hitherte maknown areas were discovered and delineated, mays gradually became more scientific jumination, major granuary governme moore sometific and accurate. They were formarly drawn for reproduction on copper and steel plates by hand designing, impressions being willed on the japressions hand-coloured. To-day press, and the japressions hand-coloured. To-day pross, and use inspressions associated to To-day mage are reproduced. By a substor of mochanical processes which vary according to their application. The finest results are obtained from hand-engraved intaglic copier plates, transfers from which are taken and printed lithographically from stone or zine and aluminium plates, the latter being med in fast running rotary machines. Another letterpress method is that of engraving the map on wax and preparing electrotypes. All these processes apply to the key map, the colours being obtained by the use of ruled or stippled tints: a separate printing is required for each colour. Accurate super-imposition of the various workings on the key plate being absolutely essential, high grade paper is required, with great skill and care in printing. The production of globes is mostly a hand process, the maps or of gibbes is mostly a name process, the image or "gores" being printed in the ordinary way and then out out and pasted on the globe, which in the case of the larger sizes is made by building up; composition on a papier maché ball, the utmost care being nocessary to ensure accurate joining of the different sections. The globe is them, polished and in the cases whether and mounted on a stand fitted in a glass moridian and mounted on a stand with printed horizon Smaller sizes are made by with printed horizon Simaller sizes are fanale by ombossing sardboard in heinispheres, then folining up to make the complete sphere, on which the gores are added. The globe of this type in not so heavy, and is largely used in schools. Here it may be patited out that the educational value of cartorization because it was been been as the control of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of the special of th advantages that are only its own

British outcomply, thanks largely to the exertions of the Royal Geographical Rociety in popularising the study of geography, has in recent times hande marked progress. Although among the surveys undertaken by various countries those of Great the study of geography, has in recent times made marked progress Although among the surveys, undertaken by various countries those of Great Bitain rank very high, until some few years ago the Continent generally, and Germany particulutly, were ahoad of us in the industry of map and stias production. Now our relative position has distinctly improved. The British large-scale maps in use on the Western Front were indisputably better than those issued from the War Office of our enemy; practical monopolisation by the Germans of globe construction, formerly uncontests, is better than tenso issued from our onemy; practical monopolisation by the Germans of globe construction, formerly uncontested, is being successfully challenged by English makers. The charts and maps of the British Admiralty are universally admitted to be the most abscirate in the world. Minute particularisation, clearness of definition and comprehensiveness of range distinguish the maps which represent the specialised labours of the Ordanoe Survey capers, who have incalculaily sariched our knowledge of district and national topography in all its ramifications.

In the sphere of commerce, as in the sphere of the oxidenic, cartography has a place of vital importance. Trade follows the flag, but where the flag goes the map must show, or the trader remains ignorant of much that it is essential for him to know. The enterprise of English map specialists provides him with the means of acquiring by simple reference and in epitoms information that without those means peaked only be obtained at the improtectable

Polleny was the great authority, his work being and in options information that without those sopied for conturies, supplemented and brought up means, pould only be obtained at the impracticable date on the knowledge of the carting surface out of personal experience.

GEORGE BLUEFFE SON AND

### SEÈDS INDUSTRY.

HE culture of seeds is an industry of both vital national concern and of individual interest. In one ramification or another is a factor in the life of each and the lives of all. On an adequate and well-conditioned imply of agricultural and wentable seeds expends the adequate and healthy supply of the case of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of th reds bare wastes are transformed into green astures rich with sustenance, lawns that Selight the eye are created and maintained, maces are carpeted that serve the ends of pleasant recreation and beneficial exercise. Royal appreciation of the importance of the Subject under brief review has been twice signified in our time, the visit of their Majesties King George and Queen Mary to the Royal Sees Establishment at Reading in 1918 having been preceded by a visit there of his august father when Prince of Wales; the bublic interest these visits aroused reflecting he interest in seed culture of all classes of the community.

For long the commerce in seeds lacked stem and organisation, and many abuses Adulteration was the rule. Sourished. Mechanical means were in use for killing the witality of cheap see is without affecting their appearance, guarantees being offered by the seed subjected to the process could by subsequent germination betray the fraud in which it was to be an item. These killed sheap seeds were mixed and sold with dear seeds of a different species but of similar form For instance, killed rape at and coleur. threepence a pound was mixed with cabbage, brocceli and other round seeds worth many shillings a pound. In the early years of last century the scandal of this and other malpractices became to great that an agitation was set afoot which resulted in a commission of inquiry, and ultimately to the passing of

the Seeds Adulteration Act.

If genks be an infinite capacity for taking jams, seed culturers on a commercial scale are a race of geniuses, for in almost every stage meticulous care must be exercised, in conjunction with exhaustive knowledge and exper enced judgment, which without painstaking would be wasted. They have to deal with aumerous species and immunerable varieties of each. To illustrate the multiplicity of anetics in floriculture alone, of instead one hundred and seventy, other species are capacity distributed. This predigality if variation is by no means confined to flower species.

one sort of blackberry—some few years ago four hundred new varieties were discovered in China. It is not-worthy that the tendency of varieties to revert to their, original type, which all breeders of time stock have observed, is equally presistent's flav varieties be kingdom. The forthis seed of a variety germinates to spaces, but not with the degree of certainty to its own varieties are perpetuated by other means.

In such qualities and characteristics as the longevity of their vitality, the duration of the period of germination, and their hardihood there are some not injuriously affected by either boiling or freezing) the seeds of different species are in extreme contrast, but the conditions required for germination are in principle the same-exposure to moisture and a certain quantity of heat, communication with the atmosphere being also necessary for the maintenance of a healthy state. A seed, when fully ripe, contains a larger proportion of carbon than any other living part, and so long as it is thus charged with carbon it cannot grow. The only means of ridding itself of this element, executial to its preservation but an impediment to its development, is in the conversion of the carbon into carbonic acid, for which a supply of oxygen This it procures from the is necessary. water absorbed in germination, fixing hydrogen, the other element of water, in its tissue, With the carbonic acid thus formed it parts by means of its respiratory organs, until the proportion of fixed carbon is lowered to the amount suited to its growth.

The typical Seed Establishment of to-day is a colony of caperts. Growing on their own lands for the seke and purpose of seed harvesting, the cultivators are sponsors for their produce when it passes into the hands of growers for other purposes. Farm seeds, grase seeds, garden and kitchen garden seeds must all be tested, the unfit and the unlikely be eliminated; means must be taken to preserve pedigree stocks from extinction or decadence. All this entails scientific, costly and elaborate equipments in some departments and an unerring discrimination and coaseless watchfulness in all.

Since the reform and consolidation of the seed industry more than a hundred years ago, its history has been one of continuous extension and development. It has been, and is, importantly influential in advancing British interests at home and overseas, and its interests at home and overseas, and its interests at home and overseas, in this age of the figures. British-grown in this age of the figures. British-grown seeds are in preferential demand all over the world. I feature at the trade is that the smallest customer may buy direct from the structure of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the

**ENGLAND** 

### THE GUN INDUSTRY OF GREAT BRITAIN

By HENRY W. R. TARRANT.

S in most other industries British firearms have, dates back some hundreds of years. In manufacturers have, since the wat, had later days the London makers have been fauleus to overcome a great deal of inertia in principally for the less types of guns and raise manufacturers have, since the war, had to overcome a great deal of inertia in getting their peace productions thoroughly well going a rain, but the wheels are now moving with regularity, and more British arms than ever before are being distributed in the various markets of the world Not quite so many skilled hand workers as of old may perhaps have c me back into the trade, but defection in this direction is fortunately more than compensated by an extended use of machining processes, of improved organisation established during the war, and by the entrance into some branches of the trade of certain hig factories equipped only for the highest class repetition machine work.

In various branches of the industry Britain has always been foremost-particularly in the production of the highest class shot guns and high-velocity hig game rifles. These however, involve the employment of skilled and artistic hand work, for which the British workman in this trade has always been celebrated. In the theaper -or, rather, less expensive grades of arms, Britain has hitherto suffered from Continental (particularly Belgian) and American comrighted by our improved methods and we are now in a fair way, as has been predicted in past issues of "WHITAKER," to leading the world in

trade in firearms once again. The centre of the trearms industry, as judged by quantities produced, is Birmingham. Birmingham manufacturers - big and littlehave very wisely formed the Birmingham Registered Gunnakers' Company, Limited, the main object of which is co-operative buying and selling Contracts, particularly for sporting gun parts and barrels, have been made with manufacturers having extensive machine tool plant. gun parts will be made in large numbers of carefully selected unaterial to a standard pattern, and will be distributed to the various gunmakers for finishing in styles peculiar to each and as may be dictated by the desires of ultimate purchasers. The basis cost of guns produced so largely in such a way must necessarily be comparatively low, and, consequently, the finished arm built on this high-grade machining with be marketed at a price that must eventually place even the cheap Continental produc-tions at a disadvantage. These guns should tions at a disadvantage. These guns should be available early in 1921 and buyers may safely be advised to send their inquiries to Birming-ham before deciding to buy elsewhere, notwith-standing that they may have had satisfactory supplies hitherto from foreign sources. From Birmingham also may be obtained high-class machine-made air rifles, smallbore and high-valority single shot and repeating rifles, all kinds of revolvers and satisfacting the satisfactory and rifles of various calibres. be advised to send their inquiries to Birming-

best in the sense that hand work and beautiful finish enter into the e really artistic produc-tions. The names of Purdy, Holland, Lang, Westley Richards, Greener, Lancaster and others are still ass ciated, at they have been for so many years with weapons of beauty whose shooting qualities are seldom equalled and cannot be beaten, and which practically refuse to wear out. Such guns and heavy game rifles are necessarily high priced, but they work out choaply, since they are more often than not hand down from father to son. This type of double-barrelled drop-down, breech-loading ejec or gun has not been modified in principle for years past, and there is little likelihood that it will be for years to come.

The war has naturally created a desire on the parts of the Allied and sympathetic Nations to control the sale of arms. This has been put into the form of a Convention in which the various Powers agree to control the movement of arms, particularly of a military character. In England machinery is now in existence whereby manufacturers have little trouble in securing permits to export arms which are intended for sale abroad for sporting use or for target practice. For operation in Great Britain a new Figerms Act came into operation towards the end of 1920. It imposes no restriction on the sale of shot guns and air rifles or animunition therefor, but purchasers of other rufle, revolvers and pistols must secure from the police authorities a licence to purchase and possess such weapons In view of the unsettled state of aftairs such regulations must be regarded as just. difficulty is experienced in securing licences, which cost merely five shillings.

Trade in military arms has practically disappeared. Wars will no doubt occur in the future, notwithstanding the fervent hope that they shall be no more. The great plants and organisations with which such a mass of muniever, still in the main available, so that in case of need the British manufactures tions was turned out during the war are, howed the British manufacturer is still in a position to supply the most up-to-date military weapons, always providing the British Govern-ment hall-marks the business by allowing manufacture and sale.

Side by side with the gun industry proceeds so manufacture of ammunition. All British the manufacture of ammunition. ammunition and explosive, factories are now controlled by one great central body. This organisation is working with great success, particularly in the direction of economising and improving manufacture. Overlapping of various manufacturers the bent out away, and Brittin has become altres of heat quite the greatest ammunition and explosive producing country 

# B.S.A. GUNSAND RIFLES

ALL the traditions of fine craftsmanship associated with rifle and gun-making are to be found in B.S.A. Shot Guns and Rifles. All the modern improvements in steel processes and manufacture are incorporated in our new models.

B.S.A. Guns and Rifles have an established reputation among sportsmen the world over. Their excellence and superiority for small and big game shooting, long and short range target work have been fully demonstrated under all conditions.

The B.S.A. Air Rifle is the greatest small game and target rifle on the market, amply powerful up to 50 yards, and as accurate and scientifically made as the most expensive target rifle in existence. Its noiselessness and absence of smoke and smell commend it to those who delight in indoor target practice, and others for killing small fur and feathered game and vermin. The B.S.A. Air Rifle entails no messy cleaning trouble, will last a lifetime, and cost of ammunition is practically negligible.

The new B.S.A. twelve-bore Shot Gun is undoubtedly the finest value ever offered. It carries no elaborate decoration, but it is equal in all that conduces to good shooting—perfect balance, crispness of crigger pull, wear resisting power, sweet functioning and beautiful ines, to the best hand-made gun ever produced. It is nitro proved, and like all B.S.A. Guns and Rifles fully guaranteed.

We should like to send you illustrated particulars of B.S.A. Air and Miniature and high velocity Sporting weapons and Hammerless Shot Guns post free on request.

## BURROWTHE STRANDATING FOR

equipments, provides the "requisite and necessary" means, is of uncertain origin. Its name is probably derived from the old French billard-a stock with a curved end-and by some writers the invention of the game itself to accredited to a French artist in the latter half of the 16th century. It was certainly brought Into fashion by Louis XIV in the middle of the 17th century, that mouarch's physicians having enjoined him to take exercise after meals. Others assert that this recreative exercise is a development and an adaptation of the ancient English sport of bowls. Spenser mentions it in "Mother Hubbard's Tale" (1591), and Shakespeare alludes to it in " Antony and Cleopatra" (about 1607), white in Cotton's "Compleat (lamester" (1674) is a description of the game as played in his time-differing essentially from the adopted French billiards described sixty years afterwards in Seymour's "Court Gamester." It is clear that at various periods the forms of play varied, and it was not until the beginning of last century that the principles of the game as played to-day were standardised in Great Britain to the exclusion of all others.

The modern billiard-table de luxe is the product of craftsmanship and artistry, in combination and co-operation. Its purpose is utilitarian: into the service and accomplishment of that purpose enter beauty of design and elegance of form. The materials employed are of the best and costilest, and some of them are brought from afar. To begin with, for legs and framework the choicest matoganies are imported, walnut, oak, and plue being also used. In no industry in which woods are employed is their perfect seasoning of greater importance than in that under review, in which from three to ten years, and even longer, are allowed for their conditioning. To be "dry" for billiard-table making timber must retain nothing over 15 per cent. of moisture, and when any doubt exists as to this limit being exceeded small cubes are tested by a special process and the bulk is judged by the result.

Where considerations of cost are not prohibitive, the relief of necessary massiveness and solidity by ornate elaboration is a feature of the designs planned by artists for execution by highly trained artifacers. These designs, and those of accompanying cabinets, are some of them in "school" and "period" styles—the Adam, Chippendale, Sheraton; Jacobean, Georgian, Louis XIV, Stuart; others of them are of new originative, dads with pharacteristics in keeping with sinders Tashhous of fursitive and other surroundings. The beds of tables were formerly made of oak, and sometimes of

HE great game for which the maker of the marble. Both were superseded by slate less Billiard table, with its appointments and conjuments, provides the "requisite and grant was as a supersed of the game is probably derived from the old French as a stock with a curved gad—and by some was a stock with a curved gad—and by some was coden boses, sut note such a policies.

The slates for heds are hewe in British quarries, and on reaching the manufacturing premises in the rough, are sawn, slaned, and otherwise prepared, lesing reduced to a mathematical water level by electrical machinery of the most recent type. Both the upper asia ander surfaces are wrought into the same exact level. The slightest inequality having to be obviated, the tendency of slate to depress has to be taken into account. The bed of a full-sized table is formed of five slates, and to ensure the even distribution of the weight of the whole bed, and to maintain a table send level, even on an uneven floor, and in all circumstances, a special frame was devised some few years ago which has proved entirely successful. It provides a separate support for each slate joint.

A little later an innovation in the making of billiard-table cushions also proved successful, rigidity being increased by the insertion of a block of tempered steel between the rubber and the wooden frieze or cushion of the table So much depending on the faultlessness of cushions, they are two ee tested by makers before being fitted round—first with regard to the run of the balls and then with regard to the size and shape of the pockets.

The shaping and the balancing of cues (made of ash and hornbeam maple) require dexterity of hand and precision of judgment. For the splices, various woods are serviceable, clony being a favourite. The cue is in the line of succession from the mace, the original implement, and was untipped until early in the eighteen hundreds.

That the fine West-of-England cloth-covering of the billiard table is always of green is to be associated, claim the supporters of the bowls theory of the origin of billiards, with the green grass on which the older game has always been played.

The cost of balls of real ivory has encouraged the manufacture of synthetic and composite substitutes, but the superiority of the former remains incontestable.

Making so many accessories as well as the table itself, and extending his activities to the provision of pendants, electric and gas shades, and other fittings and embellishments, the billiard-table maker is in his ewn sphere a "universal provider." That his export tradeis of considerable dimensions is an acknowledgement and a proof that the British-made table is as good as any and better than most.

MONGST the various British industries which, prior to the war, and suffered from German competition and consequently had much to gain by the interruption to that country's commercial activities was the piano industry; indeed, few trades were left in so favourable a polition when the war concluded. A houry takiff, imposed during the war incorder to restrict foreign made lumpries, still shielded it from any form of dumping; many of the larger factories enjoyed increased facilities as, a result of having been engaged and war contracts; and, no los important, the British piano buyer's long-scated preference for German instruments had been, for obvious reasons, rudely shaken. the future that then looked so full of promise, has found only partial The tariff remains, but the prejudice against German realisation. instruments is already on the wane, whilst the great output that was expected has been seriously retarded by a disastrous strike, lasting three months, with which the trade was faced in the early summer of 1920. The fight between workers and employers was a bitter one, none the less so because it involved a principle which the employers could not in safety concede --- the right to induce an increased output by the payment: of a bonus over and above the normal flat rate of remuneration.

Few things more paradoxical can be conceived than workers resisting an attempt to increase their earning capacity, yet this actually occurred. The result left things much as they were originally—that the bonus system would continue in all those factories where it had formerly existed—and it was agreed that the whole question should be put to a ballot, the result of which is not yet known. Although negative in its benefits so far as both sides were concerned, the strike severely affected

the trade and assisted foreign competition.

Fortunately, Germany also had her labour troubles; it was estimated in the middle of 1920 that the rate of pay to workers in the German piano industry had risen to six times the pre-war rate, whilst production per worker had fallen to such an extent that the total increase in labour costs was no less than eleven times that of 1914. These facts and the tariff militate against any bitter competition in the British market; and whilst German pianos are undoubtedly reaching us in increasing numbers, there is no question that it is at present an impossibility for the Germans, even with the advantage of a low rate of exchange, to other a piano of equivalent quality to the British at a lower or even the same price.

Therefore, setting aside all sentimental considerations, it is clearly advantageous to be British piaces, whilst in point of both waters

mip and tone they have see agual

# Foremost amongst the Great Pianos

Of all the pianos that the world produces those which possess such outstanding qualities as to make them internationally famous number less than a dozen.

### THE WEBER PIANO

takes a prominent place amongst these.

Recognised for half a century as a notable instrument amongst this select class, the Weber Piano has gained in popularity amongst the leading professional pianists, while the public has shown unmistakably its growing appreciation.

### THE AEOLIAN CO., LTD., (formerly the Orchestrelle Co.)

AEOLIAN HALL, 131-7, NEW BOND STREET, LONDON, W. 1.

LTHOUGH the gramophone is, strictly speaking, a reproducing machine, its enormous value to the musical world has been so widely established that "the talking machine" has now become universally accepted as a musical instrument.

How high and honoured a place the gramophone holds in the exclusive world of music may well be appraised by the remarkable interest which was displayed by all the leading professional musicians in last year's debut at the Queen's Hall of Heifetz, then—in this country—a quite unknown young violinsit. The voung Master came from the United States to fulfil that momentous engagement, introduced solely by the exquisite gramo phone records of his flawless art, which had a short while before been issued. His reception was stupendous. The whole Press was unanimous in proclaiming him "a great artist." The crowning tribute of the Daily Telegraph was :-

"He plays exactly like his records."

The wondrous growth of the gramophone is a study of intense interest. For the first ten years it remained almost in its original stage of development, and was regarded solely as an ingenious toy. **The machines** were let out on hire, and no records were on sale. A recording instrument formed part of the crude machine by means of which fragile records were made in the home, played .pver once, and then were useless.

I It was not until 1900 that the idea of recording famous voices and musicians, and selling permanent "copies" of them,

was conceived.

Since then the advance has been so rapid that, to-day, there is no limitation: to the recording possibilities. Every famous artist, every great production of the mutical world and of the human poice, can be heard in the privacy of ome—and to perfection.

For, not only must the record be a faithful reproduction, but the artist must be at his, or her, best before the record is considered suitable for ussue to the public.

One may possibly hear Caruso, Cortot, Tetrazzini, Melba, or any other of the great artists a trifle "out of form" on the stage or platform, but on the gramophone one is assured of their own approved and perfect performance.

It is this high standard which has raised the gramophone, with its large and steadily increasing library of records of real musical value, to its present honoured place in every musical home, in numerous schools and colleges, music societies and conservatoires. At the Royal College of Music it has proved to be not only an important aid to executive musical ability, but it is deemed to be an invaluable means of developing general critical and appreciative faculties.

Composers and artists alike agree that the erstwhile plaything has become an inestimable boon to them as a faithful some say the only reliable and impersonal-guide to the quality of their performance. Many, now, finished artists owe a great measure of success to the gramophone. By frequent visits to the recording theatre they have been enabled to watch their own progress, and so discover, and correct, any weakness of which otherwise they would have been unaware.

The eminent composer, Josef Holbrooke, once confided to me that he considered the gramophone almost inhuman in its relentless reproduction of the slightest flaw. While Scotti, the world-famous baritone, recently declared

that—

"The improvement in recording during the past years has been so great that a singer is compelled to give the matter of making records the most serious and conscientious consideration."

Look for the world-famous "His Master's Voice" Trade - mark, it is the mark of quality and is placed on our Instruments and Records for your protection.

### ELECTRIC LIGHTING, HEATING & COOKING

By J. W. ELLIOTT and

HE progress in the development of electric lighting has been very marked during the last eleven years, not only in regard to the higher candle power and efficiency of the lamps which have been produced by the manufacturer, but also by the filuminating engineer who has made a close and scientific study of the adaptation of suitable fittings in the distribution and diffusion of the light for general use, or its concentration on objects or situations where the highest illumination is of dire necessity to the worker.

In the carly days when the (arbon Filament Lamp (the only electric lamp) was in use, its average candle power approximated 16, and then very little attention was given to the use of scientifically designed reflectors for light distribution or diffusion; in fact, it was often sufficient for the lamps merely to be dropped from the suspension cords and used without shades of any kind.

The Drawn Wire Tungsten Friament Lamp, of the vacuum type, was placed on the market as a lamp of considerably improved candle power and of a higher efficiency. Then followed the Gasfilled Lamp with still greater candle power, thus placing at the disposal of the illuminating engineer considerably increased light of higher intrinsic brilliancy to be manipulated and distributed in the most useful and economical manner.

Such developments in electric lighting have mereased its popularity, and in all schemes of quired. For the nursery or sick-toom they are construction, and even those in connexion with the provision of dwellings for the working classes, this attificial means of lighting is advocated as the light which consumes no oxygen and does not vitiate the air.

The tables below, of the sizes of the Drawn Wire Tungsten (vacuum type) and the Gasfilled lamps, are those in use to-day :-

#### TUNGSTEN DRAWN WIRE LAMPS. (Vacuum Type.)

100 to 130 v. 40 Watt.

200 to 200 v. 60

TLECTRIC heating and cooking is steadily coming to the front for all purposes where health, economy, cleanliness, convenience, and efficiency are of paramount importance.

There are no poisonous fumes given off, therefore the air is not vitiated. No coal or ashes to carry, with its attendant dut and dust, soiling decorations and furniture.

Articles, such as bed-warmers, food-warmers. boiling-jugs, radiators, kettles, etc., are easily carried into any 100m in which they are 1emvaluable.

The heating quality of the electrical unit never varies like coal or gas; every unit purchased is converted into the same number of heat units by the heating or cooking apparatus.

By the use of the electric oven a saving of at least 10 per cent, over any other method of cooking meat is effected.

During the last five or six years great strides have been made in this country in the construction of large kitchen equipment. National and general kitchens have been sited up exclusively with electrical cooking apparatus, single pieces of which consume as much as forty units per hour. Large and small cooking ranges are made for hotel and domestic use. Pastry ovens of large capacity for confectioners and bakers, grfils, boiling pans, hot cupboards, steamers, fish-fryers, etc., are now in general use. In fact, electricity can be used for any and every heating or cooking operation.

The ECONOMY, CLEANS LINESS, CONVENIENCE and EFFICIENCY of ELECTRIC HEATING and COOKING APPLIANCES is causing the use of ELECTRICITY to gain steadily in popularity.

The EDISWAN way of cooking is the best and most up-to-date.

# **EDISWAN**

'Royal Ediswan' Gasfilled Lamps are now permanently established as the most economical form of artificial illuminant. Owing to the immediate success of these lamps, improvements were made which have resulted in greater efficiency and at the same time opened up a larger field for their use.

### THE BISCUIT INDUSTRY.

"Biscuit" being lexicographically, duch twice baked, the making of lexicographically is—in the indicated sense—process older them civilization, but as applied to modern commodity with which we feet out selves and the world the world it is by way helica a misnomer, for only due of the way. article's very numerous varieties—the rusk goes a second time into the oven. The cracknet, however, is twice "cooked," being bolled before it is baked; and the cracknel is the oldest biscuit known by a distinctive name. is mentioned in 1 Kings, xiv. 3.: "and take with theo ten loaves and crackriels." Biscuits have always been made, but it was only their comparatively recent manufacture by machinery that elevated biscuit making to the status of a great industry. It is an industry in which British supremacy is undisputed and indisputable. make far more, and incomparably better, then any other country. The British biscuit is any other country. The British biscuit is shightfung. A curious instance of its "peacetable penetration" into the least likely regions was mantoned by the commander of the British troops who entered Lhaan in 1904. In this scaled city of Tibet (in which, it is said, only one white man had ever been before) he was offered a biscuit made in Reading-where is situated the firstbuilt and largest biscult factory in the world; this ancient English town having been selected as its location partly because of its nearness to the finest and most suitable wheat-growing areas.

The magnitude of the modern British Industry of biscuit manufacture represents, as already implied, an instance of rapid development, for its legioning synchronised with the cheapening in price and increase in quantity of flour and sugar that resulted from legislative action and other causes not longer ago than some eighty years, the invention and adoption of scientific mec-hanism being co-incident. The primitive methods this mechanism superseded would generations ago have proved hopelessly inadequate; and to reflect on what a comparatively biscuitless England would now mean to us is to realise that of a truth the pioneer of the new system did "the State some service": to draw imaginary lines from the site of the works he established to the overseas sources from which they are to-day supplied with rice, mace, currants, sultanas and other fruits, almonds, nuts, spices, gingers - not to snumerate other ingredients of utility and luxury which enter into the composition of some of the products of any typical biscuit factory to-day, the making of cakes usually being combined with the making of biscuits-is to realise that the trade has played an important part in the promotion and consolidation of British consolidation of British consolidation of British consolidation of British consolidation and produce and in every civilised postulary; while arbitishes it has permanently and expansively enlarged the market for British flour, British dairy produce and British eggs, increasing in addition the designant for the construction. mand for ti nber and metal for the construction of packing-cases and time, and of other goods for

divers purposes.

Detailed statistical particulars would be be wildering rather than enlightening where edmany items are involved, but the following sections. will be sufficiently suggestive, The returns the Great Western, London and South-Western

mouth-Eastern Rallways show that the nimit of biscuits and cakes from one factors the delivery of materials for ther tere, require annually more than 62,000

In the beginning the export trade in biscuts and hand to the great Crystal Palace Exhibition of 1851, which was a means of spreading the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the comp the knowledge of the proved superiority of fic British comestible. Similar results followed other International Exhibitions—notably the

Great Paris Exhibition of 1878.

To witness the process of manufacture in an Ruglish factory of the first class is to discer-why the British biscuit has won the reputation it can never lose while those processes are corducted as they always have been and are to-day In themselves, accomplished by the operation o. the most ingenious machinery, supplemented by the labour of thousands of skilled hands, they are simple, but at every stage of each the most meticulous care is exercised, the most claborate pains are taken to ensure that each finished article is individually flawless and faultless. The absence of any adulterant is not enough-every ingredient, separately examined, scrupulously tested, must be not only good but the best, not only pure but the purest, and free from acquired as well as native defect. As illustrative of the precautions taken, two examples will serve. The scrutiny of currants is so close that each currant out of millions of currants comes under it, and the methods by which they are cleaned and freed from even the timest of stalks, and the smallest specks of dirt and dust, occupy 36 hours. Each egg out of millions of eggs is twice tested -first by electric light, unbroken, and then after it is broken. In composition, taste, size, shape and price the differences are many and great, but in the preparation of all descriptions, and in every department, the same rigidity of pripciple is strictly observed.

This high standard was originally set by the first firm to transform biscuit making from a casual occupation into an organised manufacturing enterprise of national and international service and importance. Consistently adhered to, it has become the accepted standard, and helped to put a reality of meaning into the familiar phrase 'British and best."

It remains to refer to the dietetic value of the blscuit, which is greatly enhanced by the variety of its classifications. It is at once a food and a delicacy, a meal and a tit-bit, and in at least one form has medicinal virtues. It satisfies the form has medicinal virtues. It assumes the hunger of the robust and tempts the appetite of the sick and convalescent. From the commission of the sick and convalescent. From the commission of the sick and convalescent. From the commission of the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick and converted the sick an pais and our sailors on all the seas. ### CONFECTIONERY.

VEN when restricted in its application to tionable American habit of gum-chewing is a fectionery covers a great multitude of varieties, many of them of very recent origination. The fact that a taste for sweetness, in an to the consistency of syrup—are known as panalimentary sense, is primitive and universal; predicates a need and uses for it in the nourishment of the human physical system and the maintenance of health, apart from the mere gratification of an appetite: in her provision of elements of sweetness in many natural co mestibles Nature herself is a confectioner. As a means for the preparation of sweetmeats or the sweetening of foods and drinks, honey was the only substance available until West Indian discoveries revealed the existence of the sugarcane, the derivatives of which, with best sugar, are now the basis of all the products of the confectionery manufacturer. It is of some significance that the constituents of sugarcarbon, hydrogen and oxygen-are three principal constituents of the human body. It was in consequence of obtained results that the special sugar ration issued on occasions to German troops in training that what had been an experiment became a practice.

The processes by which raw sugar is cleansed and refined antedate its arrival at the sweetmeat manufactory, where it is boiled, melted or sieved according to the species of confectionery to be made from it. In boiling, the methods and mechanism in use have been devised with particular regard to economy and expedition. As in almost all manufactures, expedition connotes economy, and to save both time and coal the pressure of air in the boiling pans is first reduced by means of air pumps to the diminished atmospheric pressure at great altitudes, in which the boiling stage is reached much guicker than on a lower plane. A temperature of 240 degrees Fahrenheit in the vacuum pans employed is equivalent, for the purpose in view, to a temperature to degrees higher without vacuum. A spiral steam-pipe fitted inside the pans carries the heat to the sugar. boiled sugar are made divers kinds of "halls," "drops" and "locks," and all varieties of toffee -itself probably the oldest of all Bullish sweet meats. In one form or another, the tast for toffee is ubiquitous and enduring, enermous quantities being in regular consumption. far at least as one variety of toller is concerned.

—known for many generations as butterscottle. -this is all to the good, for pure butterscotch is unquestionably as wholesome as it is toothsome. It is he fact The autries properties of hire sugar and production in mile Made in London, it is eaten by the world. conjecture has been hazarded that the objec-

"sweets," or sweetmeats, the term con-perversion of the unobjectionable practice of

toffee juting.

Sweets made with melicit sugar—sugar melted made/s theasure of the syrup being poured into capacious revolving pans, heated by steam jackets. To almonds, for example, in these revolving receptacles-the heat expelling the water from the syrup-a coating of sugar adheres, the layers multiplying (without altering the original shape of the treated articles) as more syrup is introduced. For some sorts of pan-made confections custom calls for an overcoating of gloss or polish; this is supplied by the use of the residuum of the honeycomb, again in revolving pans.

In the third process of treatment to which reference has been made, crystallised sugar is broken up by mechanical disintegration into a thin powder, which is placed in a revolving reel covered with a sieve of silk so fine in texture that there are no fewer than 25,000 minute meshes to every square inch through which the aiready powdered sugar passes. The resultant of this exquisitely close acreening, to which gum arabic is added as an agency of adhesiveness. is wrought into a dough-like substance, from which, by means of machinery of strikingly ingenious construction, are made all sweets of the lozenge class—an output of two tons representing a fair day's work of a single machine.

Equally ingenious machinery is employed in the manufacture of other varieties, of which, especially since the introduction of new flavourings, singly and in combination, there are so many that enumeration would give this page the appearance of a catalogue. In the case of "gums"—as jujubes are now more popularly called—the process is a differentiated one. necessitating the use of special p'ant, and occupying, as a rule, a full week.

In the preparation of few edibles is adulteration more harmful, particularly to children, and at the same time easier and more difficult of detection, than in the manufacture of confecstionery. Against it the purchaser of distributions and confections has encall sufficient grid later. It is the name and reputation of the maker. The names of our leading manufacturers are seven more "faustiar in our mouths" than are ties, and it is to the credit of an important British industry-with a place of its own in the national life-that the reputation attached to those names is as high above reproach or spicion as the reputation of Casar's wife was -or ought to have been.

It was first brought into this country about 1656-a costly importation for the rich, who alone comid afford it. One or two of the oldest and most exclusive establishments in the clubland of to-day were originally resorts in favour with the fashionable for the consumption of checolata, as the new drink was at first called. The plant from which it was the derivative was hailed by Linneus as Theobroma-the Food of the Gods-and in botany it still retains the name he gave it.

In view of its nutrient and therapeutic reporties, it is in keeping with "the eternal fitness of things" that a doctor was a foremost pioneer of cocoa making in Great Britain from the raw bean or nut; a British industry that now puts on the market more than 60,000,000 lbs. annually. This gentleman was Dr. Joseph Fry, of Bristol, where, in 1726, he initi-ted operations the development of which has made that city a seat and centre of cocon and chocolate manufacture. Improved resultants from improved means and processes for the conversion at home of the unprepared to the prepared encouraged the coces habit, which, without becoming less fashionable, became more popular, spreading from the classes to the masses.

The cocon (or cacao) tree itself is an evergreen, growing to a height of from 15 to 20 feet, flowering and bearing fruit at all seasons of the year, and yielding from 50 pods to, in some circumstances, several hundreds per annum. The seeds contained in each pod wary in number from 20 to 10, embedded in an soid pulp. The pods, not riponing seasonally but irregularly, are stripped off at the discretion of an expert, piled in heaps and opened; the rind is removed, and the closelypacked, almond-shaped brown beans or nuts extracted and laid out to dry before being are packed in sacks for exportation.

The original home of the tree was undentitedly the valley of the Ameron, where it grew in wild profusion. At the present time our sources of supply include Guayaquil, Para and Bahia, the West Indies, Cevion, re grown in Central America, Trinidad and Sylon. The Coylon product, of compara-ivally recent cultivation, commands the

and descenty—and a guarantee to the consumer that what is consumed is wholly pure and superlatively wholesome. In the aret place, the beans are emptied into airvestand sifted, all imperfect specimens being theown out. This preliminary is followed by the process of roasting, and roasting is followed by winnowing. Broken and stripped of hask or shell, the borries at this stage are known technically as nibs. These nibs being ground and melted into a paste, differentiation of treatment begins. In the production of the dry cocoa powder of commerce hydranlic pressure is employed for the elimination of superfluons oil or butter—50 per cent.: \*\* the making of chocolate and chocolate crease in all their "infinite variety" the paste is used with fine-ground sugar of pure quality the subsequently added flavourings being sufficient in number to meet all tastes. It is said to assert of every form of the one substance that from beginning to end of the process of manufacture, as conducted by leading British the possibility of contamination or adult tion is non-existent. The great and incre export trade, as well as the home trade, in British cocos products has been built up on the enduring foundation of a deserved reputation.

Following up our reference to their health-values, Dr. Andrew Wilson described the cocon bean as a kind of veg table egginontaining the essentials of a living body and analysis elucidates his meaning, for it regeals first tissue-forming nitrogenous matter or gluten; then energetic force or working newer in the form of digestible fat : starch and sugar ; mimerals; and lastly theobromme, a chiri and a stimulant. Nearly one-fifth of the full bulk of cocoa is pure albument, on the the white corpuscles of the blood are de-pendent. Concentrated cocoa is proved to be richer in proteids than even yeal. lean

mutton or eggs.

Royal esteem of British cocos and chocolate has been signalised by continental monarchs as well as by our own Koyal house, for to the makers who held warrants as purveyers to their late majestics Queen Victoria and King Edwards and wife hold the warrants of sing George. Queen Mary and Queen Alexandra, were also granted those of Orien Marghaista of Italy, the King and Queen of Spains and the Royal Tayour came to the same sylon. ### THE BRITISH PENCIL INDUSTRY. By G. H. MEADMORE

manufacture of lead pencils in similar is taid out in trays, in let the familiar action is lower to the discovery if Me ages amous florewhell in the discovery if Me ages amous florewhell in the structure of the year 1564. At a much carlier period metallic lead was used for markeing on paroliment, paper or other subtriet, and it is doubtless owing to the earlier that of this substance that the erroneous term black lead has been applied to plumbago or graphite.

The litetory of the lead pencil for nearly three centuries is closely associated with the fortunes of this mine, and it is probable that is no other part of the world has similar graphite been found equal to that found there. Analyses, however, which have been taken of the Borrowdale graphite show that it was not the Borrowdale graphite show that it was not

the Borrowdale graphite show that it was not of exceptional purity, but it was the physical condition in which it occurred that gave it its value for pencils. The product was in such great demand and was so closely maintained as a monopoly, that, in pursuance of an Act of Parliament, the mouth of the mine was guarded by an armed force, and to maintain the monopoly and conserve the supply, the mine was only worked during six weeks in each year. To provent pilfering, the mine was closed by provent pilfering, the nume was closed by glooding. The graphite was sold by public auction in London, and for many years the tumberland mines were probably the only source of supply for pencil making. The graphite was used in its natural state, being cut or sawn into rectangular steks and enclosed in their wooden casing. This rectual was not economic, and towards the close of the 18th century, when the deposits began to show signs of achastion, and also during the sarly part of of exhaustion, and also during the early part of the 19th century, efforts were made to discover a means by which the waste which had accu-rated in the factories and the residue from the party which the state of the party of the state. the mine could be utilised. Pulverisation, with the addition of a binding medium such as glue. isinglass, or gum, was tried, but without marked stucess, and was eventually abandoned in favour of the process originated by Conté, a French chemist, in 1795. By this process finely-ground graphite is mixed with clay, formed into strips, and baked. This invention marks the most important step in the manufacture of the modern

pencil, and is the process now in universal use.
Graphite, of which there are two distinct
types, viz., foliate or crystalline, and compact or amorphous, has since been found in many parts of the world, but that mostly used by the pencil manufacturer comes from Mexico. Foliate graphite is difficult to grind to the required flueness, and is less brilliant in colour than the amorphous, which, on the other hand, can be ground to a gritless fineness, and is of a nature which combines readily with other materials

which combines readily with other materials.

The manufacture of modern pencils requires great technical knowledge, combined with practical experience, and involved a large number of operations. The graphite, which has already been prepared at the mines, is mixed with clay in a dry state, then moistaned and milled to the requisite figuracies. Fifter present the "batch" from an excess of moisture, and it thus passes through the strip is the worldwide of the worldwide of the worldwide of the worldwide of the worldwide of the worldwide of the worldwide of the worldwide of the worldwide of the worldwide of the worldwide of the worldwide of the worldwide of the worldwide of the worldwide of the worldwide of the worldwide of the worldwide of the worldwide of the following the Armistice, he allow for shrinkage, and the "strip" is thus formed. The wood is usually imported in the form of "slats," i.e., strips about 72 ins. long, 3. in. thick, and from 2 ply to 6 ply in width, \$ ply being the width of 6 pencils. The slatz are grooved, coated with glue, and the lead strips inserted. Two slats, one of which contains the strips of the slatz are quest forether and the blocks thus stripe, are glued together, and the blocks thus formed are fed into the shaping machine. This machine cuts a series of semicircular grooves on machine cuts a series of seminician grooves dead side of the blocks converting them into alsaped panels. The reucils have then to be sand-pepered, coloured and polished, the ends cleaned, and finally stamped and bronzed.

The raw materials employed in the manu facture of coloured penells are clay, wax, and a colouring agent, but the clay is of a softer nature than the track for black panells. Roberts also

than that used for black pencils. Bohemian clay having this requisite property, has in the past been greatly favoured for this purpose, but clay eminently satishle for the purpose exists, however, in the United Kingdom, and British aniline dye suitable for the production of copying lak pencils is now obtainable. As a result of careful research work the technical difficulties in regard to the manufacture of colouted "sarip" have been surmounted, and to-day British copying ink and coloured penoils of high grade, including dermatograph penoils for surgical purposes, and pencils for marking on china and glass, are being produced.

The Pencil and Colour Industries are closely allied, the pencil manufacturer being dependent on the colour manufacturer for colours, often on the colour manufacturer for colournesson specially produced, and it is this connexion which has largely contributed towards the pencil which has largely contributed towards the pencil which has a successful in Germany. It is industry being so successful in Germany. It is obvious that with this handicap the British pencil manufacturer was well equipped in other respects, and a comparison between British and Austro-German products would show that where any difference existed in favour of the foreign pro-

duction it was primarily the finish due to colour.

During the period of the war United Kingdom production of pencils was intensified in an endeavour to meet the increased demand. New companies commenced to manufacture, and established manufacturers installed additional plant, realising a considerable increase in output.

This development continues and reconstruc-tion and smalgamation is taking place in the industry. Two important and old-established mountry. Two important and old-established manufacturers have recently joined forces and their combined resources, experience of manufactures and technical seasons work forthalows an even higher standard of production in the future than was attained in the past. ### WRITING INKS.

THE need of a writing fluid in even the very carllest stage descivilisation is so obvious that probably the invention and use of as ink long ante-dates the first mention in the history of any period. A papyrus of Ancient Egypt, 2500 B.C., was discovered by Flinders Petrie bearing ink-written characters, and the invention of an ink in China is accredited to Tien Tcheu, 2607-2507 B.C. The scribes of Old Rome used sepia, the black pigment secreted by the cuttle fit, the employment of a purple-red ink being restricted to the signatures of their Emperors.

iron-gall ink prepared from an iron-salt and tannin appears to have been first described by Theophilus the Monk in the eleventh century A.D., but Pliny in the first century refers to a means of blackening paper containing green vitriol by immersing it in an infusion of nutgalls. Iron-gall inks prepared by the admixture of extracts of galls, barks and other materials with green vitriol came subsequently into general use, and instructions for their making were among the household recipes of the sixteenth century. These earlier iron-gall inks were essentially a solution of pigment in water. Scientific investigations made in the year 1748 led to some alterations of the formula and some improvements as the result, but it was not until circa 1830 that the secret of a radically superior writing fluid was discovered. and a few years afterwards made known, by a young medical man who brought to bear on his study of atramental liquids his professionally acquired knowledge of chemistry. His successful researches and experiments produced writing inks (solutions of green vitriol and tannin, coloured by indigo and logwood) the blue tint of which in writing blackened on e posure as the consequence of the production of the pigment within the pores of the paper. perfect fluidity, as well as penetration and permanence, of the new ink had never been attained before, and it was presently proved that this distinguishing advantage was unaffected by extremes of climate.

Of more or less imitative composition, but with the addition of a small quantity of madder, were some tous patented by another expenimenter in 1856. The sulphuric or acetic acidi in these inks maintaining in solution the iron gallate or tannate, their preparation—like that of the blue-black writing fluids that ante-dated them—required much less gum than is used in ordinary (black) writing ink, the encyclopædic description of which is: "a ferroso-ferric gallate,

"suspended in a solution of gum in water obtained by adding a depoction of substance." Outsigning tannin (assault, nut-gails) to a solution of popparas. Calls contain gallot-annic and gallot acids, which, with ferries sale, form "a black precipitate; with ferries sale, the "precipitate is white. A proportion of gain 1- "added for the purpose of "supplicating The "precipitate equally throughout the supplies."

The many uses served by antline colourextend to some extent to this manufacture of coloured inks, in the preparation of which they are both substitutive and supplementary. Then adoption by British ink manufacturers dates from a patent taken out in 1862.

An analysis, made as recently as 1908, of samples of a large number of British inks proved the existence of wide differences in the inks of different makers. For instance, it was shown that the total solid matter in the output from vario is sources ranged from 1.87 to 7.94 per cent., ash from 0.42 to 2.52, and iron from 0.18 to 1.09.

The most striking proof of the superiority of the best British over the best foreign writing inks is to be seen in the fact that, although there is nothing to prevent the manufacture of the best anywhere, the former have long been in favour and use literally all over the world Even as regards overseas markets not closed by the war, export statistics for the last few years would obviously be valueless and misleading; and one difficulty and obstacle that affected the home as well as the export trade was not removed by the conclusion of peace. Within some eighteen months of the outbreak of 1914, the scarcity of glass and stone receptacles became a hindrance that grow greater the longer the war lasted. It was impracticable to substitute any other materials for glass and stone, metals being barred by reason of corresiveness. Ink powders would have relieved the situation, the sail and intrinsic objections to them not being considerable; but popular prejudice was a factor not to be overlooked, while there was a further reasonable objection to the substitution from the manufacturers' point of view, in that their products might have suffered in reputation through carelessness or negligence in the conversion or re-conversion of powder to fluid.

The difficulty as regards stone and glass bottles has proved persistent. It has now, however, been mitigated, and expectations are jugified that by the end of the present year it will have been practically overcome.

Roefforts to improve on Henry Mill's primitive attempt seem to have been made till 1784, but from that year onwards numerous experiments for the construction of a more practical machine are on record. The most notable achievements

were the following.

In 1840 two British inventors, Bain and Wright, patented a typewriter-telegraph, in which the vital principle of the typebar circle was first used. In 1843 an American, Thurber, constructed the first machine embodying the step-by-step lateral movement of the paperplaten. In 1867, the Scientific American described n writing machine recently invented by John Pratt, an American living at Camden Town (London), and this description arrested the sactioning and an entre users priors arrowed the attention of two American printers, Shelse and Soule, who were busy with the invention of a machine for serially numbering book pages. From it they got the idea of extending the scope of their own apparatus so as to cover the abundant as well as the flower against the serial pages. alphabet, as well as the figure range. For aix years Sholes persevered, and eventually succeeded in making a model good enough to ceeded in maning a model good enough to interest a well-known firm of gue-makers in its commercial possibilities. In 1876, the first imperfect but capable machines were marketed. That was the beginning of the typewriter industry proper. It was not, however, until industry proper. It was not, however, until after 1890 that its success was assured. The world's annual output of typewriters is now roughly estimated at 500,000; the United States, with its population of nearly 100,000,000, absorb-ing about 250,000. Later Board of Trade returns than those for 1919 are not available; the number of typewriting machines imported into Great Britain in that year was 55,864. The multifarious work caused by the war created an enormous demand for typewriters. The war changed the conditions of nearly every office in the kingdom. All managers were confronted with a large amount of clerical labour, with a sadly depleted and often inexperienced staff to do it. and often inexperienced staff to do it. Many resorted to typewriters who ought to have used them before, and were willing to pay double prewar prices. In 1917 (till the end of 1919) importation of typewriters was prohibited, and demand forced up the value of second-hand re-built machines to fancy prices. In addition to the typewriter, every device that would save time, labour and expense was tried; consequently British offices are latter couring than ever British offices are better equipped than ever they were, though even yet it is far from fully realised to what an extent mechanism can replace or expedite clerical work. Hitherto the manufacture of typewriters in England has not been on the scale that it should have reached. This applies, unfortunately, to many other trades.
As a result of the war, the British public are awake at last to the necessity of supporting

red are the light out of corporations altered its methods, and brought out a machine at half the price of its standard one, which course is stated to have yielded satisfactory results. This shows that a good machine can be produced at a popular pr and encourages a much larger object of io made machines. Manufacturers genera whatever the commodity they manufacture. called on to produce more after the war than they did before. If this can be done by working at harder pressure for a shortened day, so much the better, especially from a national health standpoint, but it camenly thus be done by the increased use of mechanical facilities. labour-saving instrument, which lessens fatigue and eye-strain, the modern typewriter should be regarded as indispensable in every well-found office. At first it was difficult to sell, because the enormous value of the legibility, uniformity and speed of its work was not recognised. To-day these points are appreciated. Even now, however, the demand for the typewriter has not nearly reached its limits. In their own interests many more people ought to use it, and many business firms ought to use more machines.

Many professional and commercial documents are still unjustifiably pen-written. The typewriter has recently been developed in a new direction, mechanism having been adapted to it which makes it an adding and subtracting machine, while it remains also a writing machine. The convenience of having at hand in the counting-house an instrument that will perform all these functions is invaluable.

The Great War having brought us into closer touch with a number of foreign countries, it is opportune to note another special feature Typewriters equipped with a plant type carrier for general correspondence can also be fitted with separate type carriers for the language of any nationality (or for medical, astronomical, or other technical symbols), the change being effected in a few seconds. There are about ninety different kinds of typewriters made in the world. "Made in Germany" must for years be a term of repreach, reminiscent of cut-throat competition and "peaceful penetration" leading up to a pre-arranged war. "Made in England" must be the hall-mark demanded, whenever possible, by every patriotic purchaser. The extension of existing British industries, synchronising with the establishment of new ones, is a vital madonal duty; their protection and support will be the Empire's best thanksgiving for a victorious peace, and the best means of ensuring to every wing said every woman ample work and adequate remanieration in the homelands so many

died to save.

The tools required for the manufacture of typewriters are multitudinous, and the necessary plant throughout is very costly, but it is gratifying to conclude by announcing that at the time of writing new factories for the manufacture of British machines are in progress in at least three different parts of England, one of them being on

the point of opening.

Frinting Craft coincide with the growth of civilization and the development of the Arts. Whether, in 1440, Gutenberg of Germany or Coster of Holland was the inventor of printing from movable types—still a debatable point—does not come within the province of this article. The progress of the printing craft since, its

The progress of the printing craft since its introduction into England in 1476 by William Caxton reads like a romance. It has always attracted to its ranks men of high ideals with artistic and scholarly attainments, noted for perseverance in overcoming seemingly overhelming difficulties, with the result that to-day the industry ranks seventh in the great industries of the country, with an estimated capital of over £30 000,000, invested by some 8,000 firms, employing approximately 300,000 workers. The work of a printer to-day is quite a different matter from what it was in the days of Caxton, who had to undertake many of the operations which are now performed by twenty-two different branches of the industry, each with its own trade union.

Printing from movable types was first employed for the production of books and their substitutes, and although this branch does not represent more than one-tenth of the volume of printing to-day, it is probable that by this section of the craft printing is best known to lovers of good typography. There is an undefinable charm and restfulness in a well-printed book, irrespective of the literary merits of the volume.

Printers like to think that their art is the art preservative of all arts, and that their craft has educated the world; further, that it is the power behind all other industries. Whatever value the public may place on these claims it is acknowledged that the priating industry is an important one. London being the original home of English pit ting, it is appropriate that printing should be looked upon as London's staple industry and that this city should be the most important printing and publishing centre in the world.

The trend of the times is towards specialization, therefore it is customary for firms to specialize in some particular class of printing, such as book, commercial, newspaper, colour, poster, or polygiot productions, each branch demanding skilled workers with educational and artistic requirements above the average.

Printers, along with other industries, fluid that this is a mechanical are, and if success is to be achieved plant must be kept in a high state of efficiency to cope with the ever-expanding calls made upon ft. At one time all printed matter had to be "set up" by hand, a single letter at a time, by the compositor. This is still done in ordinary commercial job printing, which is the largest section of the industry; but compositing machines are now extensively employed for setting up hooks, newspapers, and similar classes of work. It is by this means that editions can be obtained expeditiously and produced at a low cost. In the newspaper section remarkable progress has to be recorded, particularly during the last 103 years. In the heghning of the 19th century newspapers weep "printed be hand presses at the rate of about 300 single impressions an hour. In 1814 the first steam press was made for The Tunes. By this means 1,100 sheets

refer plants, as hear, which was tiling considered a great achievement, but the mammoth printing presses of to-day are capable of not only printing but also folding and delivering something like 200,000 completed newspapers in an honr.

There are two methods by which reproductions of colour subjects can be obtained. One is the relief method as used in letterpress printing, for which three relief blocks are required. Each of these has to be printed apparately in one of the three primary pigmentary colours, and when printed over each other they give colour renderings approximating those of the original picture. The bulk of the commercial colour work of to-day is done by this means and is known as three-colour process.

The other method is that of chromo-lithography, for which a design is made, usually by hand, on a calcureous stone or other suitable printing surface from which an impression can be obtained on a sheet of paper. For this process separate stones are required for the various colours, each of which has to be printed separately, frequently as many as twenty colours being required. The pictorial posters seen on the hoardings are printed by lithography.

Within the last few years photography has taken a very active part in all reproductive processes, reducing the number of printings and eliminating much of the hand work of the lithographic artist. Photo-lithography, coupled with the planographic process of "offset" printing by which the impression is obtained from an intermediate eylinder covered with a sheet of rubber and not direct from the plate bearing the design, has the advantage that rough or uncoated paper can be used successfully. There are great opportunities for development in this branch of the industry.

Polyglot printing means the production of books, etc., in different languages. Firms undertaking this highly specialized work require extensive "fourts" of type which are only occasionally used, and also incur considerable expense in obtaining a staff possessing exceptional linguistic qualifications, so that accuracy may be ensured.

Comparatively recently the principle of one of the earliest means of obtaining prints has been adapted to suit mechanical requirements. By the application of intaglic methods the design is etched or engraved below the surface. This is covered with link, which is then cleaned off except for the ink in the interstices, which vary in depth according to the density of the tones. This process is an ideal method for reproducing plotures, and will create a field of its own. It is generally known as "gravure."

Although Germany can claim to be the home of printing—and it has to be admitted that much excellent work is turned out there—it is generally soknowledged that when British firms are equipped to cope with a particular class of work they have nothing to fear. In the past the workmen of other countries may have been more favourably circumstanced to obtain high-grade productions, but it is seldom that the technically stained British printer-graftsman is unable to hold his own when competing under similar conditions.

## EVOLUTION OF THE STEAMSHIP ON NORTH ATLANTIC. See WHITAKER'S ALMANACK, 1920, page 792.

#### LARGEST STEAMERS FITTED WITH REFRIGERATING APPLIANCES.

Baroneasa, 475,000 cubic feet; Princessa, 473,689 cubic feet; Duquesa, 470,137 cubic feet (Furness Houlder Argentine Lines); Nictheroy, 467,500 cubic feet; Nebraska, 467,500 cubic feet (Royal Mail S.P. Co.); Northumberland, 466,000 cubic feet (Federal S. Nav. Co.); Armagh, 466,000 cubic feet (Union S.S. Co. of N. Zealand); Navasoid, 465,500 cubic feet (Royal Mil S.P. Co.); Cornwell, 464,920 cubic feet (Hasham Foundry & Eng. Co., Ld.); Marquesa, 464,622 cubic feet (Furness Houlder Argentine Lines). There were on June 30, 1290, 734 vessels fitted with refrigerating apparatus; of these, 32 had each insulated chambers, with a capacity of not less than 300,000 cubic feet; 32 had each not less than 300,000 cubic feet.

#### LARGEST STEAMERS FITTED FOR LIQUID FUEL.

Olympio, 45,350 tons (White Star); Aquilania, 45,647 tons (Cunard); Minnesola, 20,602 tons (Atlantic Trans. Co. of W. Virginia): Tyrrhenia, 16,000 tons (Anchor); Golden State, 14,500 tons (U.S. Shinpping Board); Manchuria, 23,659 tons; Mongolia, 23,639 (Atlantic Trans. Co. of W. Virginia); Niagara, 23,425 tons (Union S.S. Co. of N. Zealand); Tenyo Maru, 23,396 tons (Toyo Kisen); Bendigo, 13,000 tons; Ballarat, 23,000 tons; Ballarat, 23,000 tons (P. & O.). On June 30, rose, there were 4,930,340 tons of merchant shipping under construction, with a view to classification in Lloyd's Register of principally for United Kingdom, Shipping, Inited States and Japan; 96 per cent. of the total tomage in Lloyd's Register consists of steel or iron steamers. Vessels of great size lost during the war have not yet been replaced, general cargo steamers being more in demand. On June 30 there were 56 vessels, each of 10,000 tous and above, being built under Lloyd's Survey, 55 vessels of 275,714 tons, intended for carrying oil in bulk, were classed during the year, also 436 new vessels of 1,995,788 tons gross fitted for burning oil fuel. Of the world's total tonnage recorded in the current edition of Lloyd's Register the following approximate division as regards fuel may be made; vessels representing about 76 per cent, use coal as fuel, 16:3 are fitted to use oil as fuel for boilers, 17 use oil in internal combustion engines, and 6 per cent. have sail power only; 28 new vessels of 79,80g tons were fitted with oil engines, 20 of these having a collective tonnage of 76,993 tons; 150 sets of Diesel engines were in course of construction, and about the same number of sets of other oil engines, of which about one half were building in the United Kingdom. The largest Diesel engines then being constructed were those for the Glengele a twin-screw vessel of 9,15a tons, having 16 cylinders 2916 inch diameter, and stroke 4576 inch. The largest oil engine vessel completed during the year was the Afrika, 8,597 tons, fitted with Diesel engines having 12 cylinders of 2916 inch diameter and 4516 inch stroke.

## You'll find it in "Whitaker."

## Every "well found" Passenger Ship carries a Library.

"It is a commonplace to say that no reference library is complete without "Whitaker." One can go much further and remark that a great many people find the Almanack a reference library in itself. There is nothing to equal it, either in conception or in the completeness and care with which it is put together and kept up-to-date.—The Times.

## "Whitaker" is a Library in itself.

BIBLE. PRAYER BOOK **BAPTISM** CATECHISM CONFIRMATION HOLY COMMUNION PRAYER AND **MEDITATION** CHURCH SEASONS

**HISTORY** MISSION WORK LITERATURE SCIENCE ART AND ARCHITECTURE POETRY BIOGRAPHY PHILOSOPHY NATURAL HISTORY HEALTHY STORY and PICTURE BOOKS for BOYS and GIRLS of all ages.

A RECENT DEVELOPMENT in the Publishing business. We have recently formed a Department, under an Expert, to provide information about books of all kinds for all classes of readers.

Inquiries will be gladly answered by letter or personally at the Society's head depôt (temporary address—64, New Bond Street, London, W.).

All who are interested in the problem of getting people to read Religious Literature are invited to apply for a copy of the new S.P.C.K. rules for the establishment of depots and branches. Much thought has been given to the matter, and various interesting possibilities are outlined.

# Stanford's Library Maps OF THE CONTINENTS.

UNIFORM IN SIZE AND PRICE.

Four Sheets, coloured. Size of each Map complete, 58 by 65 inches.

- \* EUROPE,—Stanford's Library Map of Europe. Scale, 50<sup>3</sup> miles to an inch (1:3,220,177).
- \* ASIA.—Stanford's Library Map of Asia. Scale, 110 miles to an inch (1:6,969,600).
- \* AFRICA.—Stanford's Library Map of Africa. Scale, 943 miles to an inch (1:5,977,382).
- NORTH AMERICA.—Stanford's Library Map of North America. Scale, 83½ miles to an inch (1:5,274,720). New edition.
- SOUTH AMERICA.—Stanford's Library Map of South America. Scale, 83½ miles to an inch (1:5,274,720). New edition.
- \* AUSTRALASIA.—Stanford's Library Map of Australasia. Scale, 641 miles to an inch (1:4,089,064).

## \*STANFORD'S NEW LIBRARY CHART OF THE WORLD.

NEW AND REVISED EDITION:

On Mercator's projection. A clear, readable map, beautifully printed, and indispensable to the proper study of the general and commercial geography of the World. The true significance of "The Great War" can be realized only by the study of a map of the World such as this. Four Coloured sheets, complete, 76 × 54 inches.

The above maps can be supplied Mounted on Rollers, and Varnished. Mounted to fold in Cloth or Leather Case, or Mounted on Spring Roller to meet customers' requirements. Prices will be furnished on application.

For Durability we strongly recommend intending purchasers to have the maps mounted in either of the above ways

\* New editions of these maps embodying the decisions of the Peace Conference will be published as soon as the new boundaries are definitely fixed.

EDWARD STANFORD, Ltd., are London Agents for the maps issued by the Ordnance Survey, the War Office, India Office, and for the charts issued by the Admiralty.

London: EDWARD STANFORD, Ltd., 12, 13, & 14, Long Acre, W.C.2.

Cartographers to H.M. the King.

#### EDUCATION."

#### MESSRS. GABBITAS, THRING & CO., 36. Sackville Street, Piccadilly, W., Regent

have a Department specially organised for advising Parents and Guardians as to the best Educational Establishments for Boys and Giris in the United Kingdom or on the Continent. The Firm have had experience as Educational Agents for nearly fifty years, and during their long career have been instrumental in sending Masters and Tutors to the leading Schools and Tutors Establishments, and are in the closest touch with all educational nusters. They can give, FREE OF CHARGE, to the Parent or Guardian information and advice as to—

CHOOLS FOR BOYS OR GIRLS. TUTORS' ESTABLISHMENTS. EDUCATIONAL HOMES. DOMESTIC ECONOMY, AGRICULTURAL, AND SECRETARIAL COLLEGES.

EITHER AT HOME OR ABROAD.

To enable the Firm to advise efficiently it is necessary that full particulars should be given, especially as to the age of the Pupil, previous education, and present standard of attainments, special subjects of study, locality, whether a large or small establishment is preferred, and the fees it is intended to pay.

The Firm also can assist in procuring the services of Private Tutors and Governesses, Resident, Travelling, \on-Resident, or Visiting, of whom they always have a large number on their Lists.

Transfers of and Partnerships in Boys' and Girls' Schools are also negotiated. Masters, Tutors, and Governesses seeking Posts can have a Prospectus on application, free of charge

#### ST. LEONARDS-ON-SEA.

#### ST. PAUL'S HOUSE.

UPPER MAZE HILL

#### **MFOLKESTONE**

The Medical Officer of Health writes :- "Aspect, S. & S.E. The town is one of the best-planned seaside resorts. The comparatively very healthy and dry climate is due to the porous nature of the geological formation and, in addition, the facilities for drainage make mists, damp and fogs almost unknown. The sanitation of the town is carefully guarded, and precautions taken from time to time to maintain its efficiency. For an educational centre it is particularly adapted. A fashionable holiday resort, residential town, and cross-Channel packet station, close to Shorncliff camp, one and a half hours from London, modern Folkestone stands on a lofty cliff on the Kentish coast facing the Straits of Dover." Sunshine (1919), 1,520 hrs. Pop. 33,502.

#### MALVERN

(Worcester). The Medical Officer of Health writes :- "Malvern is picturesquely situated on the eastern and western slopes of the range of Malvern Hills, with extensive and magnificent views on The hills, which rise to an altitude of 1,400 feet, are easily accessible for delicate persons, either on foot or by carriage. The climate has a most beneficial effect on invalids. The houses are so placed as to receive more than the ordinary amount of sunshine. Weakly children, especially those suffering from tubercular glands or continually recurring catarris, in nearly all cases do remarkably well here. The rainfall is low, and the soil dries with remarkable rapidity. The water-supply is bountiful and of great purity, and the sanitary state of the district generally of a high standard. The average annual death-rate is 10'5 per 1,000 of the population. Outbreaks of infectious diseases are few and quickly suppressed, as the Urban Council are provided with every means for promptly dealing with any case that may arise," Pop. 8,106.

BOYS.

## . POW WESTON-SUPER-MAREY ①符

The Medical Officer of Health writes:—"Lies on the shores of Weston Bay in the Byrstol Channel, on the sea ward of the Mendips, covering the southern slopes of Worlebury, and the alluvial and sandy plain at its foot. Well protected from the cold northerly winds by the Weston-Worle ridge, sandy flam at its foot. Well protected from the cold northerly winds by the Weston-Worle ridge, and object to true invigorating breezes direct from the Atlanto Ocean, the town has an equalifity of climate through all the seasons of the year, difficult to flud anywhere else in England. Its cimate is equable and dry—bracing in summer, warm in winter, being sneltered against the east wind by the Mendip range. Favoured with a dry sub-soil, a high sunshine record, and remarkably free from infectious diseases, the town is admirably suited for invalide and delicate children, and is pre-eminently deligitful as a holiday centre, with numerous beauty spots."

A spactous asphalted marine parade and carriage drive extends for over two miles; protected by a sea wall. The piers of Weston-super-Mare are amongst its chief attractions. Ample

opportunities for marine excursions. On Knightstone are swimming baths, and a handsome pavilion, capable of seating s,500 people, used principally for theatricals. Public Library and Museum. Electric tramcars.

Water-supply, Sunshine (1919), 1,514 hours constant. Drainage, modern. Soil, sandy.

Baths, sea water, swimming, Turkish, &c.

Bathing, mixed. Pop. \$3,235

TELEPHONE: 278 HOLBORN.

### Law Reversionary Interest Society, Ltd.

No. 15, LINCOLN'S INN FIELDS, W.C. 2.

ESTABLISHED 1853.

OAPITAL STOCK - - - £400,000 DEBENTURE STOCK - - £381,130

Chairman: SIR RICHARD STEPHENS TAYLOR.

Deputy-Chairman: IRONARD WILLIAM NORTH HICKLEY, Esq.

PURCHASES.—The Society purchases Reversions and Remainders, whether absolute or contingent, Life Interests, whether in possession or deferred, and generally all Interests (in approved property) that depend upon the duration of human life.

LOANS.—The Society also grants Loans on the security of such Interests, either on Ordinary Mortgage or by way of Reversionary Charge. The latter mode meets the convenience of borrowers who do not wish to make any payment for either principal or interest until their Reversionary Property falls into possession. The amount to which the Society will then be entitled is fixed at the outset, and does not depend on the time elapsing between the grant of the Loan and its repayment.

Forms of Proposal and full information can be obtained at the Society's Offices.

G. H. MAYNE, Secretary. [254

### MONEY PROMPTLY ADVANCED

THE ARCHBISHOP OF CANTERBURY. VICE-PATRON .. PRESIDENT .. COL. SIR ROBERT WILLIAMS, Br . M.P. THE REV CYRIL C. B. BARDSLEY, M.A. HONORARY SECRETARY

"The largest contribution that any man or woman can make to the Cause is that which is made by loving fatthful and persecuting prayet, he who truly gives this will not long keep back anything that he has —Lambeth Conference Report

The Society's work of teaching, healing and preaching is mainly carried on within the British Empire—in India and Ceylon, East and West Africa, in Egypt, the Sudan and Mesopotamia—as well as in Palestine, China, Japan and Persia. It is responsible for half the missionary work of the Anglican Communion in India and Africa, and holds many important strategic positions in nearly every mission field, in some of which no other society is at work.

### FIGURES THAT SPEAK.

- In 1910 there were **1360** European missionaries on the staff and case native Christian workers. In 1920 there are **1338** European missionaries and 13,325 native Christian workers. 63 C.M.S. European missionaries and 6 native clergy have been made bishops.
- 74 doctors (60 men and 14 women) were at work in 42 hospitals during 1919-20. and schools.

Over see men and women are required to supply urgent needs alone.

### ESTIMATED NEEDED INCOME THIS YEAR £700.000.

Contributions may be sent to the Lay Secretary at above address or to local secretaries, sequests, which may be to the General Fund or in trust for any special section of the work, should be made "to the Church Missionary Society." Cheques and postal orders should be made symble to the Society and crossed "Williams Deacon's Bank."

Patron-HIS MAJESTY THE KING.

Honorary Secretaries-MESSRS. GEORGE POCOCK AND PERCY R. POCOCK.

This Society grants Pensions to the Blind Poor at their own homes in sums ranging from 10s. to 25s. per month.

There are upwards of 1,200 pensioners, residing in various parts of the Kingdom, among whom nearly 210,000 is annually distributed.

To be eligible, applicants must be tetally blind, above 21 years of age, of good moral character, and in receipt of an income not exceeding £30, if single, and £45 if married. No distinction is made in regard to sex or creed; nor is the receipt of parish relief a disqualification.

Application guest be made on the printed forms previded by the Society.

Subscribers of 19s. 63. annually, or Donors of Tive Guinests, are entitled to One Vete at every election, and multiples thereof in proportion.

Contributions will be gratefully received by the Treasurer, or by the BANK OF ENGLAND, or Messre.

237, SOUTHWARK BRIDGE ROAD, LONDON, S E. 1.

W. ELLIOTT TERRY, Secretary.

# Society for the Abolition of Vivisection 22, NORTHUMBERLAND AVENUE, LONDON.

According to the latest Parliamentary Return, the number of experiments made in 1919 was 62,877. A large number of these were inoculation experiments, and, as the report says, "are attended by no considerable, if appreciable, pain."

The pain does not lie in the operation itself, but in the after effects. The animal so innocently operated on may have to live days, weeks or months with no anæsthetics to assuage its sufferings, and nothing but death to relieve.

The following is an example of what may ensue in the dog after the "little needle prick":—

"A dog was inoculated on January 28rd. In a few days it began to show signs of wasting, then the head became swelled and dropsical, and also the fore-legs and paws; later on this swelling disappeared, but the dog seemed very ill and weak, and there was a thickening of the membrane of both eyes. Two days before its death it refused food and seemed very thirsty. On February 20th it died."—Abridged from the Journal of Pathology and Bacterrology, March, 1906.

The Society offers to send a Lecturer, free of charge, to Literary Societies, League Meetings, &c.
